>
> Remember they will still have 6 meter operation available to them.

Sure - but how often does 6 open up when the spots are down? How easy is it to build a 6 meter rig from scratch? How much routine, slow CW ragchewing is there on 6?

>But
>I still like this because it is an incentive to upgrade. And with no
>Element 1, what is the impedance to upgrading?

The written!

My point in the "funnel" stuff is that many people are heavily influenced by first impressions. If they see hamshacks full of gear Made In Japan, that's "normal" to them. If they think of ham radio as being local voice stuff using FM, that's "normal". If they think of antennas as being little aluminum things...you get the idea.

But if they start out with a wider range of choices...

>>> General: General test will scale back on the RF safety, and replace it
>>>with more theory. Antenna questions and operating procedures. The never
>>>entertaining band edge questions will get a few more questions.

>> Needs to have some serious HF centric stuff, though.
>
> Good point. Consider it added.

Done

>>> Extra: more in depth treatment of theory. No band edge or safety
>>>questions, at this point, if you don't know safety, you've already fried
>>>your mind. questions demonstrating knowledge of different modes.

>>> The only controversial part of my proposal is that there would be a 2
>>>year wait between General and Extra. I could be persuaded to drop that
>>>pretty easily!

>> I'd say the experience requirements should be included.

> Yippee! Got one person on board with that one! I really do think it's a

>good idea, and it doesn't unduly punish anyone.

Some will say it does on the following grounds:

1) New ham has to attend at least 2 VE sessions. Can't get the Extra "right out of the box". More work for ham and VEs

2) 2 years wait doesn't mean 2 years experience. License could just sit in a drawer for 2 years.

3) Vanity calls

4) Perceived as a raising of requirements - hasn't been an experience requirement since the mid 1970s.
>
>>> Bands and sub bands:
>>>
>>> At this point, the bands will remain the same. Bandplan adjustments
>>>will be made. Novice sections will remain, and will be considered a
>>>"practice ground" for those who want to learn Morse code. note: this may

>>
>> The Novice subbands were originally put in the middle of their bands in a
>> misguided effort to keep them from straying outside the band edges. Since
>> Novices were originally required to use crystal control, this made little
>> sense even in 1951.
>>
This was one of the worst features of the old Novice. None of the Novice slots

were harmonically related, so you needed a different set of xtals for each band. Indeed, the harmonics of the old 80 and 40 meter Novice segments were completely outside the ham bands (except 10 meters) Woe to the Novice who forgot and left a 40 meter rock in the rig and shifted to 15, or left an 80 meter xtal and shifted to 40! the rig would tune up just fine but be out of band!

>>> So there you have it. Here is a plan that shouldn't p**s anyone off

>> rather than what we have now where newcomers get all of VHF/UHF but no HF.
>
> I'm still big on the idea of a person having a good reason to upgrade.

That reason should be things like more power and more spectrum. Not HF vs. VHF/UHF.

>This does it, and allows a real entry level opportunity for people, yet
>allows a niche for those who are happy to stay there. And there will be
>plenty of people that will be happy to stay there.
>
> Without a real reason to upgrade, I can't really support a three class
>system. I don't think that there are enough different privileges to
>offer between three classes, unless you make one of the privileges HF
>access.

See my three class idea of some posts back.

> And I can't really support power limits as a incentive to upgrade. It's

>a forced distinction (keeping in mind that all distinctions are
>arbitrary at some level) that I do not find acceptable.

Why not? The old Novice had a power limit of only 75 watts input. My first rig (the Southgate Type 1) ran 10-15 watts input on 80, and would light a Christmas tree bulb to full brilliance when tuned up right. Yet I made lots of QSOs and had lots of fun.
>
> RF safety and safety around high voltages is of critical importance for

>amateurs. The RF field calculations are one thing, but to me even more
>important is the potential for RF burns and B+ shocks.

All the more reason for power level as an incentive.

The power supply for the Type 1 was the cut-down chassis of an old Philco TV set. 250 watt power transformer, 5U4 rectifier, big capacitors and choke. I had enough sense at 13 not to get zapped.

> The Technician is exposed to these dangers at events such as Field day
>or contesting with other hams - I know I was.

For me the big danger was falling out of trees while putting up antennas. Never did, though.

> And while a Unlicensed person may be operating the equipment too, they
>are much more likely to be afraid to touch anything but the PTT switch.
>The Technician will be more likely to be careless through familiarity.

Again - all the more reason to have power level as an incentive.
>
> I cannot in good conscience support a testing regimen that does not
>test extensively for safety at the base level. And since the newly
>minted Ham would have the knowledge of High-power levels and high
>voltage, to limit them to low power would be arbitrary and punitive.

There's no test for working on 110/220 house current, which will easily kill you stone cold dead.
>
> So that is my rationale for a system that has three classes, HF access
>for two of them, and doesn't penalize or overly promote anyone.
>
Which is pretty close to what we have now!

Ah so naive, that is what they say now; just wait, if it starts to make big money, that will change. You really don't think they are going to take BPL down just to avoid interference to hams do you?

2606. BPL NPRM Approved

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-14 03:48:06 UTC
From: Keith <kilo_watt_radio@earthlink.net.SPAM>
Message-ID: <102r6jm7qeeif5@news.supernews.com>
Source record: 87332
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.policy

Broadband over Power Lines has been approved for a NPRM by the full 5
commissioners of the FCC. What this means for all short wave listeners
is that once BPL is deployed a SWL is not protected by any
interference caused by BPL transmissions. SWL's use part 15 devices and
most accept any interference.
If BPL interfered with local Radio or TV broadcast then the
licensee of those stations could complain, however I doubt
if any SWL in America will be able to get a international
broadcaster to complain to a utility company about BPL interference.
Basically this could lead to the death of shortwave listening and
ham radio is equally threatened.
Ham radio and CB operators will face irate neighbors
who have their BPL Internet connection interfered with by
transmissions. I can easily see enraged neighbors calling
their congress person complaining about the 'CBer' wiping
out all the Internet connections in their neighborhoods
and congress quickly passing a law placing the burden on
the Ham Radio and CB Operator not to interfere with Internet BPL.
The FCC has allowed the beginning of the end of HF operation
by allowing BPL to use HF frequencies.

IMHO

It may work, but I question how well. One reason for granting permission is to extend internet to rural areas that can't be served by conventinal means. This Summer may prove whether it will be feasible or not. If the energy grid goes down, no one will be surfing on power lines. There is concern about the stability of the power grid and its vulnerability to terrorists and wackos. I question surfers' personal safety and security using a power line setup. I already have a great deal of interefernce all up and down the bands from some sort of constant computer signal in the area - power line transmission does not turn me on. It seems like recycling old rickety infrastucture to use new technology whose needs are not going to be well met by a means of transmission that is insecure and unreliable. Beside that, increasing the traffic on circuits already maxed out by spam and hackers is going to do nothing good to existing users of the internet. The Service Providers already lack sufficient bandwidth, and increasing traffic will not improve service if the providers cannot provide enough servers and secure enough transmission lines. To crash a program or a computer it is only necessary to gable enough ones and zeros - maybe even just one.

Well the way I look at it is, that if it makes the spectrum useless, then I will use my gear for nothing more than a 24 Hour Beacon. Which in turn should make BPL pretty much useless. Not worried about the neighbors, the will never know whats causing there service to fail, and sooner than latter they will drop the Service.

Keith,

Don't worry about the neighbors on this one. This could indeed become a tacky situation. Since amateurs are supposed to used the minimum amount of power for reliable communications, some coordination via the internet/telephone may be in order. You pick a frequency with a lot of interference from BPL. This means that both ends will have to use substantial power. Where there is an egress, there also exists an ingress; i.e., amateur transmissions will cause problems for BPL. At this point, complaints may well be made. The amateur will also have to enter a complaint. At this point, push is gonna come to shove. I suspect that some government/public communications will also have a problem. Obviously, they don't want to run much up into VHF or there would be a *ton* of problems, but there will have to be a point that someone either says we need reasonable coordination and protection - or - to heck with it, big money gets everything. Notice how (at least in my newspaper today) they are starting to talk about cutting social security? Not because it is going broke; rather, because the feds are 'borrowing' these funds to keep the deficite only rediculous rather than insane. The feds have to pay it back (and they already want to welch on it). It is about time that we see in print what the government *really* wants.

>even though no longer required...I missed that possibility!

I should have written "non-hams considering getting a license."
There are a couple of newsgroupies in here who demand adoration
and dedication to the 'service' which they equate to 'interest.' :-)

Few radio amateurs consider the whole of amateur radio. Their
activity is intensely personal, one-on-one with their radio. If using
morse then they are devoid of normal human clues to the other
contact's whole personality...no visuals, no voice tone, no clues to
gender, no real sense of emotion of the other. Voice mode is better
with normal voice clues to the other party. During all contacts on
the radio they remain in a relatively isolated spectral bandwidth even
if netted with several others. There is sufficiently long time for the
mind to imagine many things about the 'service,' to expand far from
its reality into realms of fantasy greatness.

The major identification with the entirety of any national radio activity
is publications of a special-interest nature. To a rather large extent
in the USA, the ARRL uses their text to build upon the imagination of

its readers, to identify with it. That lends reinforcement of the imaginary grouping, provides a "sense of belonging" otherwise not happening in radio use or even in a home workshop by themselves building something.

As a result of this insular activity having little in the way of regular human interaction with others, the individual amateur will use their own experiences in the hobby as a basis of what others are expected to do. The self-identification of personal desire with what should be (in their minds) for others does not make a reasonable consideration of future regulations that affect many, many others, including those not yet licensed in amateur radio.

What adds to the unreasonableness is the ignorance of what other radio services are doing and there being a great number of different radio 'service' people using, maintaining, designing non-amateur radios. The idea that non-amateurs "not understanding" amateur radio is false and little more than an attempt at rationalization of their own ignorance. All radios work by the same laws of physics. Human made legislation does not change the way a 'service's' radio works or that a non-amateur entering amateur radio be considered a "beginner." [I am certain there are Canadians as unreasonable as our esteamed robustness, Heil]

There is another factor which is common to those amateurs not engaged in a radio-specific occupation...that the state of the art of everything in amateur remain rooted in the familiar they know. That's almost impossible since radio is only 107 years old and the technology involved has been advancing in large plateau jumps all the while. That is true of all electronics-related fields of work. They want the state of the art to be fixed so they can enjoy what they found emotionally satisfying long ago when they reached their personal best in the hobby. Others of the modern day are little interested in meeting antiquated standards of entering amateur radio.

>> Radio amateurs who have already achieved the top "upgrade" license
>> class in their country would NOT be affected in their privileges. Their
>> only "affect" is a psychological disturbance due to newcomers not
>> having to do exactly as they did many years ago.
>

>requirements as an erosion of standards, and will be offended by it.
>That is simple human nature. Most affected by this are the folks at
>the top level of licensing. Which makes sense - they put in the
>greatest effort under the old system.

Add to that the uncertainty of understanding modern radio, other than the emotionally-loaded advertisements for amateur radio equipment and to use that to be one up on their fellows.

That "simple human nature" aspect can alienate them in the eyes of others. Some of those do not profess to care citing their long tenure and alleged self-worthiness. Those are just trying to put "greatness"

in the hobby activity by using themselves as top-level role models.

>> I don't know that much about Industry Canada's charter in Canadian
>> law but the FCC is NOT required to provide psychological sustenance
>> to already-licensed radio amateurs.
>
>Exactly the same in this regard. They regulate, not placate....

Placation is for the membership organizations. In the USA the ARRL
tries to pose as a second-level "government." They are not but decades
of propaganda have created a large following of Believers. It works very
well for the ARRL; the propaganda is self-serving survival activity but
Believers in the league will not believe they have been brainwashed. :-)

>> At present, the majority expressed opinions of radio amateurs both

>the same rigorous testing as they were years ago is somehow getting a
>free ride. What isn't being adequately taken in to account are the
>underlying reasons for simplification, elimination or change of the
>various test elements.

Much of that resentment is strictly personal, about themselves. Such
clouds judgement on what might be good for all, especially those not
yet licensed.

What has been stable, or relatively so over the years is known,
familiar. Such stability can be comforting. Change, newness is to be
avoided since an unknown condition can cause much anxiety. Then
too, personal rank, status, title might lessen if regulations change to
remove some of that.

>I believe that IC was simply giving the amateur community first chance

>se, but because they wanted to hear the opinions of those currently
>involved in the hobby before they decided what to do next. I'm no

>expert in the inner workings of the government here, but I believe
>that NPRM is the next step, and public comment is requested at that
>stage.

I see little wrong with that to get an INITIAL opinion by any regulator.
I see lots wrong with it if the regulators do not hear from others prior
to decisions.

>Remember, with no incentive licensing scheme here, the perception of a
>'class structure' of a hierarchical nature is not nearly as prevalent.
>Most of the folks I have talked to welcome the elimination of code
>testing - after all, it isn;t code that is being eliminated, just the
>mandatory practical test - which only survived as far as 2003 because
>of the ITU requirements. In the poll submitted from the amateur
>community to IC, almost two thirds of the lecensed amateurs here want
>code testing dropped from our requirements! Approximately the opposite
>of the ARRL numbers bandied about here....

The decades of propaganda by the ARRL is showing up in the un-
swerving Belief that the old ways are still supposed to be best. Part of
that (on the part of ARRL) has been the catering to the insularity of
amateurs, of keeping the status as much quo as possible so as not
to upset the old-time amateur membership.

>BTW, a question - does the FCC operate based entirely upon democratic
>principles?

Fairly well. Everything they receive in text is put on public view, even
the "sunshine" commentary on NOI 03-104, the FCC thing on BPL.

"Sunshine" things are for public viewing but are not supposed to be
used by FCC on regulatory matters. [I have no idea how the name came
to be] On the BPL NOI, of 5,199 documents, 8 are in the "sunshine"
category. One of those 8 is from a Canadian. :-)

The FCC openly invites the public to communicate...and they get a LOT
of communications about all of USA civil radio. That includes letters and
other communications from federal elected officers who are forwarding
complaints from their constituents to the FCC. It is all out in the open
except for a very few legal matters, almost all legal action documentation
which does not concern regulatory legislation.

By the way, it is quite possible that the FCC was all for BPL from the
first. The NOI or Notice of Inquiry was NOT about whether or not the
service should exist...the Notice Of Inquiry was for the purposes of
determining what the standards of RFI should be. Almost none of the
5,199 documents submitted any such standards or levels. :-) All were
caught up in a wildfire confligration of opinion saying "BPL is BAD!"

The FCC has had an intenal program to improve rural America's tie to
the Internet. BPL would fit right in with that noble goal. Connection to
the Internet over existing power lines involves very, very little additional
cost to anyone. Almost no one has bothered to think of that side of the

equation.

>From what I'm hearing on the group, specifically WRT
>incentive licensing several years ago, they seemed to ignore the will
>of the majority and come up with something on their own.....which
>seems to have annoyed everyone. Oh well, at least they got everyone
>to agree on something!

Sigh. More human nature. Since certain sides didn't get their way,
they quaff the juice of fermented spoiled grapes...they whine before
the time. :-)

Many demand that the "majority" of anything do as they do or that
what they do IS what the "majority" does. They are absolutely,
poselutely for-sure knowing such, cannot be considered otherwise.

The caste system of the "IL" or Incentive Licensing definitely exists
in USA amateur radio and continues today. It fits to a T the notion of
(or desire of) some who NEED some way to show they are "better
than others" through some sort of federal whatsis. Now that Internet
has robbed much of the ARRL's monopoly on communications direct
with the FCC, the FCC might be seeing a different picture of what
the feelings are in USA amateur radio.

ARRL still doesn't have more than a quarter of all USA licensees as
members. They were always a minority group but had sufficent income
from publication profits to afford legal counsel and a lobbying company
in Washington, DC. At one time back the FCC just rubber-stamped
what the ARRL wanted. Not so anymore.

means.

Serving the rural areas happens to be the biggest marketing lie in the whole mess. It won't be econmically feasible in the rural areas. There simply are not enough customers per square mile to justify the amount of equipment (e.g. signal boosters and transformer bypasses) that will have to be installed.

Yes, yes, I'm sure the Nazi's have infiltrated the Danish Ministry of Communications and caused such an important domino to fall into uselessness.

Why is it that Dave can mention Nazi agression, but no one else?

You really need to be more careful in your reading. Neither adoration
nor dedication to the ARS has been deemed necessary, nor has any
"demand" (one of your favorite words) been made. In your case, you've
written of "interest" a number of times but have never quite been
interested enough over the course of decades, to have actually taken an
amateur radio exam.

> Few radio amateurs consider the whole of amateur radio.

There's Len's false premise #1.

> Their
> activity is intensely personal, one-on-one with their radio. If using
> morse then they are devoid of normal human clues to the other
> contact's whole personality...no visuals, no voice tone, no clues to
> gender, no real sense of emotion of the other.

That's no different from newsgroup posts, e-mails or even a letter.

> Voice mode is better
> with normal voice clues to the other party.

I'd have to agree. If you aren't using a voice mode, you certainly
aren't going to have any "voice clues".

> During all contacts on
> the radio they remain in a relatively isolated spectral bandwidth even
> if netted with several others. There is sufficiently long time for the
> mind to imagine many things about the 'service,' to expand far from
> its reality into realms of fantasy greatness.

I know there must be a point here somewhere. Radio amateurs may use any mode authorized them. There are voice modes. There are modes which lack "voice clues". Those would include any keyboard mode as well as morse. Does your line about "fantasy greatness" come from your personal feelings of fantasy greatness?

> The major identification with the entirety of any national radio activity
> is publications of a special-interest nature. To a rather large extent
> in the USA, the ARRL uses their text to build upon the imagination of
> its readers, to identify with it.

I see. Then National Geographic, Gun Digest, Southern Living, Gourmet, Field and Stream do the same.

> That lends reinforcement of the imaginary
> grouping, provides a "sense of belonging" otherwise not happening in
> radio use or even in a home workshop by themselves building something.

Imaginary grouping? It isn't imaginary, Leonard. Being an amateur radio operator and belonging to the ARRL are very, very real. The sense of belonging comes from actually belonging. One can be as involved in the goings on or as uninvolved as one chooses.

> As a result of this insular activity having little in the way of regular
> human interaction with others, the individual amateur will use their own
> experiences in the hobby as a basis of what others are expected to do.

Now we have Len's false premise #2. In reality, amateur radio is as much about interacting with others as anything else. Hams chew the rag on the air, via letters, on the telephone and on the internet.

> The self-identification of personal desire with what should be (in their
> minds) for others does not make a reasonable consideration of future
> regulations that affect many, many others, including those not yet
> licensed in amateur radio.

Len's false premise #3.

Any changes in amateur radio regulations have an effect on both those desiring entry into amateur radio and those currently licensed in amateur radio.

> What adds to the unreasonableness is the ignorance of what other
> radio services are doing and there being a great number of different
> radio 'service' people using, maintaining, designing non-amateur radios.

It certainly isn't clear what is meant by the statement above. What other services do or don't do has little to do with what radio amateurs do or don't do. That's probably one of the reasons that there are *different* radio services. What is good for some point-to-point, channelized service isn't necessarily good for amateur radio.

> The idea that non-amateurs "not understanding" amateur radio is false
> and little more than an attempt at rationalization of their own > ignorance.

The idea that one who has no experience in using amateur radio has no real feel for amateur radio is no falsehood. Ignorance would be to assume that because one has experience in another service, that all of his experience in that service directly transfers to amateur radio.

> All radios work by the same laws of physics.

All of everything seems to work by the same laws of physics as physics are now understood.

> Human made legislation
> does not change the way a 'service's' radio works...

Of course not. Legislation regulates how they may or may not be used and where they may or may not be used.

> ...or that a non-amateur
> entering amateur radio be considered a "beginner."

Now that you've seen your sentence broken in half, does it occur that it could use some work? A non-radio amateur who enters amateur radio is always going to be a beginner in amateur radio just as a non-painter who starts painting is a beginner in painting. Those who've just started driving taxicabs are beginners at driving a cab. Why not write what you really mean: that it chafes you to be thought of as a beginner.

> [I am certain there
> are Canadians as unreasonable as our esteamed robustness, Heil]

Oh, you mean those who don't agree with you and who might agree with me? That's very likely. In fact, it is very likely that are quite a few of 'em.

> There is another factor which is common to those amateurs not engaged
> in a radio-specific occupation...that the state of the art of everything in
> amateur remain rooted in the familiar they know.

It is tough to keep a running tally on the number of false premises. I think this one is #4. You'd have no idea of whether this happens in reality. Radio magazines are full of articles and adverts featuring new devices, new equipment and new ideas. A lot of what radio amateurs discuss is new devices, new equipment and new ideas.

> That's almost
> impossible since radio is only 107 years old and the technology involved
> has been advancing in large plateau jumps all the while.

There's a masterful re-statment of the obvious!

> That is true of
> all electronics-related fields of work.

It is true of many fields of endeavor. It doesn't make your previous statement correct.

> They want the state of the art to
> be fixed so they can enjoy what they found emotionally satisfying long
> ago when they reached their personal best in the hobby.

Let's see, that's false premise #5, I believe. I've encountered no such thinking. Was your personal best in radio those days at ADA? Those are days you keep bringing up here?

> Others of
> the modern day are little interested in meeting antiquated standards of
> entering amateur radio.

You mean *you* aren't interested in passing a morse code exam.

> >> Radio amateurs who have already achieved the top "upgrade" license

> >greatest effort under the old system.
>
> Add to that the uncertainty of understanding modern radio, other than
> the emotionally-loaded advertisements for amateur radio equipment
> and to use that to be one up on their fellows.

Why you condescending windbag! Where do you get the idea that no one but you can possibly understand modern radio? How did you get the idea that someone would only want the best equipment in order to play a game of one-upmanship? Did it ever occur to you that someone would want the best equipment because it can do the job better than something which isn't as good? It must chafe you to realize that someone obtains the latest transceiver, filled with all sorts of DSP tools and then uses those tools to assist in hearing a weak morse signal on a static-filled hunk of medium wave spectrum.

> That "simple human nature" aspect can alienate them in the eyes of
> others. Some of those do not profess to care citing their long tenure
> and alleged self-worthiness. Those are just trying to put "greatness"
> in the hobby activity by using themselves as top-level role models.

I've observed "simple human nature" here when someone proclaims himself an advocate for regulation change in an activity in which he has no involvement. I've observed it in one who brings up his military service and insults the military service of others. Such "simple human nature" comes up when someone talks of his PROFESSIONAL credentials and accomplishments and insults the professional credentials and accomplishments of others. Do you have any idea of who I mean?

It might be a guy who has little worthiness (self or otherwise), a guy who has no tenure, a guy who has no "greatness" and a guy who has little time to develop himself into any kind of role model within amateur radio. If you'd like to talk reality, Len, here's some for you: You aren't a radio amateur. You have no involvement in amateur radio.

> >Exactly the same in this regard. They regulate, not placate....
>
> Placation is for the membership organizations. In the USA the ARRL
> tries to pose as a second-level "government."

Len's false premise #6. It is simply an Andersonian ploy to smear the ARRL with false accusations. Leonard, you are as involved in the affairs of the ARRL as you are with amateur radio.

> They are not but decades
> of propaganda have created a large following of Believers. It works very
> well for the ARRL; the propaganda is self-serving survival activity but
> Believers in the league will not believe they have been brainwashed. :-)

In what do you believe, Leonard? Do you believe in amateur radio? Do you believe you'll ever be a participant in amateur radio? Do you believe that Dennis Kucinich has more support for his ideas than you for yours?

> >Yup - there is clearly a notion that everyone who is not subjected to

> Much of that resentment is strictly personal, about themselves.

How much of your obvious resentment of radio amateurs and the ARRL is strictly personal--about you?

> Such
> clouds judgement on what might be good for all, especially those not
> yet licensed.

As one who is not yet licensed, do you believe your judgment on amateur radio issues might be clouded by your personal feelings?

> What has been stable, or relatively so over the years is known,
> familiar. Such stability can be comforting. Change, newness is to be
> avoided since an unknown condition can cause much anxiety. Then
> too, personal rank, status, title might lessen if regulations change to
> remove some of that.

You can take comfort in the known, Len. You're still not a radio amateur.
You have nothing to do with the changes, lack of them, rank, status, titles within amateur radio.

> >I believe that IC was simply giving the amateur community first chance

I think you may have the cart before the horse. Quite a number of long
time League members support continued morse testing. It is in the
ARRL's best interest to consider the views of its core membership, those
who provide money, while doing a delicate balancing act in trying to
attract new members. The League does cater to the insularity of radio
amateurs.
Catering to the insularity of radio fields is left to other
organizations which don't want to upset their core memberships.

> By the way, it is quite possible that the FCC was all for BPL from the
> first.

Possible? That fact was impossible to miss. It took surgeons several
hours to remove Kathleen Abernathy's shoe from her yap.

> The NOI or Notice of Inquiry was NOT about whether or not the

> determining what the standards of RFI should be. Almost none of the
> 5,199 documents submitted any such standards or levels. :-) All were
> caught up in a wildfire confligration of opinion saying "BPL is BAD!"

That all took place, no doubt, because BPL at HF and the lower VHF frequencies is BAD.

> The FCC has had an intenal program to improve rural America's tie to
> the Internet. BPL would fit right in with that noble goal. Connection to
> the Internet over existing power lines involves very, very little additional
> cost to anyone. Almost no one has bothered to think of that side of the
> equation.

Lots of people have considered that side. Cost isn't everything. The FCC denied amateurs a slice of LF spectrum based largely upon the idea that such operation (at very low power) could interfere with electric company low level communications via the power grid. The law of reciprocity hasn't been repealed.

> >From what I'm hearing on the group, specifically WRT

Are you writing of your personal feelings that the FCC has not yet done away with morse testing in amateur radio or are you writing of your bitterness that you've not yet attained that "Extra right out of the box" or any other amateur radio license?

> Many demand that the "majority" of anything do as they do or that
> what they do IS what the "majority" does. They are absolutely,
> poselutely for-sure knowing such, cannot be considered otherwise.

You've been DEMANDING that radio amateurs do as you wish. You aren't even involved. Why the feelings that you know what is right for amateur radio?
Why can't you consider otherwise?

> The caste system of the "IL" or Incentive Licensing definitely exists
> in USA amateur radio and continues today. It fits to a T the notion of

Don't let the actuality of how incentive licensing came to be detract from a wild-eyed rant, Len.

> ARRL still doesn't have more than a quarter of all USA licensees as

Your disingenuous side shines brightly, Len. The ARRL "minority" has been for decades, the largest organization of radio amateurs by an enormous margin. Rubber stamp this.

What you SHOULD write, Lennie, is an apology to every licensed
Amateur for your rude behaviour, misrepresentations and bolfaced
lying.

As fo "demand(ing) adoration", I think yuo've got your foot in
that bucket too, Scummy One.

> Few radio amateurs consider the whole of amateur radio.

Please, Lennie...

From your VAST experience IN Amateur Radio, tell US allllllll
about "the whole of (A)mateur (R)adio.

> Their
> activity is intensely personal, one-on-one with their radio. If using

Again, Lennie, you express an arrogant, obviously spiteful and
unabashedly biased and NON-FACTUAL "OPINION".

> Others of
> the modern day are little interested in meeting antiquated standards of
> entering amateur radio.

"Others", Lennie? Or just you?

Obviously YOU are incapable of meeting ANY standard since you are
not licensed.

Therefore, having NOT gone through the process, having NOT
actaully laid eyes on an Amateur examination or participating in the
process, you once again voice an UNINFORMED opinion based solely upon
spite and your own jaundiced view of Amateur Radio.

> >> Radio amateurs who have already achieved the top "upgrade" license

All three assertions false.

ANY change to Amateur Radio affects ALL licensees.

> That "simple human nature" aspect can alienate them in the eyes of
> others. Some of those do not profess to care citing their long tenure
> and alleged self-worthiness. Those are just trying to put "greatness"

As opposed to you who is trying to put himslef in a position of
greatness without having actually contributed ANYTHING of value to the
service, Lennie?

> What has been stable, or relatively so over the years is known,
> familiar. Such stability can be comforting. Change, newness is to be
> avoided since an unknown condition can cause much anxiety. Then
> too, personal rank, status, title might lessen if regulations change to
> remove some of that.

So far the one person who is most resistant to change in Amateur
Radio is you, Your Lyingness.

As for the "rank, status" rhetoric you flail about in, well, all
I can say is that it's yet one more bit of evidence of your lack of
realtime experience IN Amateur Radio.

> The decades of propaganda by the ARRL is showing up in the un-
> swerving Belief that the old ways are still supposed to be best. Part of
> that (on the part of ARRL) has been the catering to the insularity of
> amateurs, of keeping the status as much quo as possible so as not
> to upset the old-time amateur membership.

I find it interesting you refer to ARRL policies and practicies
as "propaganda", yet three yeas after having uttered your assertion of
"the ARRL is dishonest", you ahve yet to provide evidence of same.

I find it hard to accept your opinons as valid when all you have
to back them up is MORE unsubstantiated rhetoric based solely upon
your "nose against the glass looking in" observations.

> >From what I'm hearing on the group, specifically WRT
> >incentive licensing several years ago, they seemed to ignore the will

So far you're the only whiner here. Repetitively.

> Many demand that the "majority" of anything do as they do or that
> what they do IS what the "majority" does. They are absolutely,
> poselutely for-sure knowing such, cannot be considered otherwise.

And YOU suggest we ignore the opinions of those EXPERIENCED in
Amateur Radio as opposed to your own INEXPERIENCED, third-party
rhetoric.

Uh huh...

> The caste system of the "IL" or Incentive Licensing definitely exists
> in USA amateur radio and continues today. It fits to a T the notion of

> the feelings are in USA amateur radio.

Thankfully they generally don't reflect the pro-socialist,
anti-education opinons you espouse, Lennie, but I am sure it warms
your heart that they are getting there.

I've been watching with some interest lately the lambasting the
FCC commissioners ahve been taking over THIER "lack of experience",
adn certainly their lack of common sense in recent broadcasting flaps.

Ironic, I think, that 30 years ago when the FCC was ripe with
staffers who had callsigns of thier own that the FCC seemed to be able
to keep control of nearly ALL problems in ALL areas or

radiocommunication.

Now that "fuzzy-feelgood" political correctness and a COMPLETE lack of contact with the world of reality, we have Senate panels reading the riot act to media leaders because a hip-hop performer flashed us for less than 5 seconds with a pastie-coevered breast.

> At one time back the FCC just rubber-stamped
> what the ARRL wanted. Not so anymore.

Whew...!

Took a lot of gumption to post THAT mistruth, Lennie!

Just about EVERY Amateur journal of the last 50 years is ripe with reams of coverage of "stuff" the League either promoted to or fought against the FCC, only to be second guessed by the FCC. In most cases the FCC found itself regretting it DIDN'T follow the League's advice...But that's "civil government" at it's best....

Now, PLEASE do some FACT-BASED RESEARCH before making any more outlandish and obviously flawed postings...Your "credentials" as a "radio professional" only fade in "value" everytime you utter such idiotic assertions in public. (Which in YOUR case are frequent)

> Do you support those free upgrades or not?

I (K2UNK) do...on this "one time" basis.

> If you support them, then by definition you are supoorting a reduction in
> the written test requirements for those licenses.

Incomplete statement. Supporting a one-time upgrade doesn't
mean anyone supports "permanent" reductions of the written
requirements. THAT is the critical difference.

> Now you might argue that it's only a temporary or one-time reduction, but
it's
> still a reduction.

It is a ONE time reduction. You and I can disagree about the reason's
to do it, but my support or anyone else's support of the one
time upgrade does NOT mean I or anyone else supports
permanent reductions in requirements.

> And since it affects over 400,000 hams, it's not a small matter.

If it goes through it will be forgotten in a couple of years. Why, because
no one losses any privileges.

> >>Yet now I see that same person

> bus to General.

If "lots" of non-hams suddenly became hams by that process I'll
be truly surprised. As for the existing novices...that is now
down to about 30,000...assuming everyone of them did what you
suggest.

> Those with Tech will have a *disincentive* to
> actually take (or study for) the General.

Life's a bitch and then we die.

> Same for Advanceds and the Extra.

The arte at which advaceds have been upgrading is pathetically
low already.

> >your arguments are just plain lame
>
> How? Do you think people won't do this?

Some will, but it won't be significant.

> >and your "someone might
> >get privs without taking a test with the same number of questions as I
took"
> >is REALLY showing.
>
> Nobody today can even take the tests I took. You couldn't pass the tests I
> took,
> Carl.

Translation, I did it, so should everyone else.

> The tests I took are not the issue. Free upgrades and reduction in written
test
> requirements are the issue.

The issue is ONE time free upgrades only. No effort is being made to
lower the General or Extra requirements.

Cheers...and add Hong Kong to the list of countries dropping ALL code tests.

I'm sure that your news will be greeted with great elation by the roughly 360 radio amateurs (including club stations and those licensed by, but no longer living in Hong Kong) of Hong Kong. The world is slowly being freed from this morse testing oppression.

It is truly a great day for something-or-other.

[snip]

It's my guess that interference and the FCC are the least of BPL's
problems. Now let's see if it's fast and reliable enough to get people
to pay for it.

> entering amateur radio.

Amen, brother... you've gotten to the core of the problem. But, it is
WORSE than you state, as these people can't simply go on doing what
they've been doing, they try to STOP others from doing new things...
they are actually PRO-ACTIVE in their actions. I used to think it was
simply "foot-dragging" - but it is worse than that... they are like
little children, as they are being taken kicking and screaming to
their beds for the night, they will lash out or wildly grab onto
ANYTHING they can to slow the process... but, inevitably they WILL go
to sleep, and they just end up looking all the more PATHETIC for their
TANTRUM-THROWING.

Are they qualified?

A few things here.

IF the people getting the free upgrade are qualified then there is *no reason to increase the requirements ever again*. If you support that you are just as supportive of a hazing requirement (over-testing) as the evil Morse code supporters.

If they are not qualified, then you are not only sending them upward and onward without the proper qualifications, you are doing them a great disservice.

Quite frankly, I believe that You, Carl, and Mr. W5YI do *indeed* support permanent changes in the written requirement access to HF. I refuse to believe that you are all that naive to think that we'll just do this once and no one will notice that suddenly the requirements will go up.

I remember promises of never accepting reduction in test requirements. I remember the explicit distancing of personal opinions from NCI. But here you all are, supporting reductions in the requirements for access to HF. A pattern forms.

That's a good point. The reduction affects only those who have certain licenses
on a certain date.

But it's still a reduction for a very large number of hams.

>THAT is the critical difference.
>
And it raises a critical question: Why is it OK as a one-time thing but not as
a permanent change?

>> Now you might argue that it's only a temporary or one-time reduction, but

>
>It is a ONE time reduction.

Agreed - but it's still a reduction. And Carl said he would not support any reductions in written testing. Now, all of a sudden it's OK because it's a one time thing.

>You and I can disagree about the reason's
>to do it, but my support or anyone else's support of the one
>time upgrade does NOT mean I or anyone else supports
>permanent reductions in requirements.

True.

But why is a one-time reduction OK, and not a permanent one?

>> And since it affects over 400,000 hams, it's not a small matter.
>
>If it goes through it will be forgotten in a couple of years.

That's what they said 40 years about incentive licensing.

No, it's not what I want.

But how do we argue against those who want it?

>Bottom line, 2 years from now no one will care.

How do you know?

In the past 12 months, FCC issued over 20,000 new ham licenses. Most of those were Techs. Why is it OK for them to get General privileges based on having passed the 35 question Tech test, and having less than 1 year experience, but not OK for future hams?
>
>> >> >> >Like all those Advanced are on the air now. Give me a break.

>> took, Carl.
>
>Translation, I did it, so should everyone else.

Nope. Not at all.

It means that I met different qualifications. And I've seen the qualifications, both written and code, slowly reduced for over a quarter century. And that's not a good thing.

>> The tests I took are not the issue. Free upgrades and reduction in written
>> test requirements are the issue.
>
>The issue is ONE time free upgrades only. No effort is being made to

Not yet. But a one-time upgrade is one more step. And it paves the way.

>Cheers...and add Hong Kong to the list of countries dropping ALL code tests.
>
That makes what - a dozen countries?

I wonder what HK's written test requirements are.....

Kinda makes you wonder, eh? I cannot come ot any logical conclusion
that does not include a permanent reduction in the qualifications.

The rest snipped, I gotta go do some housework.....

Why would they be "unqualified?" Let's be serious here!
In the incentive license scheme the privileges gained have no bearing
at all to the knowledge base in the sylabus for the license test.
I'd strongly suggest the greater danger to personal or others
life/limb is equally shared by Tech thru Extra as it relates to
permitted VHF/UHF operating at the legal limit.

> >>If you support them, then by definition you are supoorting a reduction

Tell me why they would be unqualified? Unqualified as to doing
what?

> >>Now you might argue that it's only a temporary or one-time reduction,

YES...and if you think otherwise, please tell us what makes them unqualified and/or in what specific aspect(s) or priviliges they would be unqualified.

> >>And since it affects over 400,000 hams, it's not a small matter.

I repeat agin, the incentive licensing system bears NO true relation to the increased privileges granted. The incentive system as created simply asks for passage of another test on subject matter of a more difficult content. Knowledge of that material certainly doesn't lead to any special qualification that differentiates an Extra operating in the "Extra Only" spectrum from that of a General operating in the General spectrum of the same band at the same maximum permitted power.

> If they are not qualified, then you are not only sending them upward
> and onward without the proper qualifications, you are doing them a great

>
> Quite frankly, I believe that You, Carl, and Mr. W5YI do *indeed*
> support permanent changes in the written requirement access to HF.

The ARRL does not take that position at all...except for the "new" novice which would have greater HF privileges...but with limited power. Carl and I support the ARRL petition (except for the code test)

> I refuse to believe that you are all that naive to think that we'll just
> do this once

Believe whatever makes you feel good.

> and no one will notice that suddenly the requirements will go up.

The requirements won't go up...they will stay the same. The only
thing happening here (if FCC approves) is the written test will
be waiver one time for the particular ham going from Tech to General
or Advanced to Extra.

> I remember promises of never accepting reduction in test requirements.
> I remember the explicit distancing of personal opinions from NCI. But
> here you all are, supporting reductions in the requirements for access
> to HF. A pattern forms.

Yea, yea...and with the music to twilight Zone in the
background too.

Believe whatever you want, whatever floats your boat.

Cheers,
Bill K2UNK

> I (N2EY) don't support it.
>
> Why is it OK because it's a one-time thing?

Because there's no real harm to anyone...and if you want an
incentive licensing scheme to be retained, this does it plus
it simplifies licensing and regs for the FCC and does it in one
snapshot of time.

> >> If you support them, then by definition you are supoorting a reduction
in

Agreed.

> >THAT is the critical difference.
> >
> And it raises a critical question: Why is it OK as a one-time thing but
not as
> a permanent change?

Because it harms no one to get to the simplified scheme AND
it then continues with the incentive system as before.

> >> Now you might argue that it's only a temporary or one-time reduction,
but

Big difference. Every General that lost privileges still understands
that loss. With this, no one losses anything.

> >Why, because no one losses any privileges.
>
> Maybe. Or maybe not.

If maybe not, please point to what privileges will
be lost by which license holders.

license
> class.

The database could be updated overnight by replacing all licenses with their
upgraded license. Doing that does not require an actual new paper
license to be issued if Part 97 contains the following statement:

Any license holder whos paper license is Tech is now recognized to be
General and (ditto for Advanced to Ectra).

> >> >> Why not upgrade all existing hams except Novices to Extra, then?

> >be truly surprised.
>
> 20,000 in the past 12 months.

We'll likly lose that many to attrition this year alone. Look at
the future expirations per Joe Speroni's web site. There's one
month alone that has (I think) over 10,000 expirations.

> >As for the existing novices...that is now
> >down to about 30,000...assuming everyone of them did what you

And if that is your true meaning, why would you state
that "You (Carl) couldn't pass the tests I (Jim) took, Carl."
Do you really think Carl would be unable to pass the same

written tests if he had to?

> >> The tests I took are not the issue. Free upgrades and reduction in written

You "know" all those technical things from experience and learning how to twiddle a morse key in amateur radio? :-)

Please point to a trade-technical press with detailed technical information on any of the proposed BPL systems. Detailed descriptions including signal levels, not computer simulations based on assumptions.

>
>You're a genius. No wonder they hate you.

Independent thought is a no-no in U.S. amateur radio.

ARRL does every ham's thinking for them, outlines the standards
and practices, tells them what to do, how to do it, how to talk
about it, what they must like and what they should dislike. It even
supplies the official radiogram forms that all must use for the
fabled NTS. They are official.

Morse loving Extras will reinforce that by assuming a parental
role in "knowing what is good for everyone." They are so because
they say they are. None may disagree with those gods.

All others are inferior.

On the contrary, Bill, to olde-tyme hammes, the "unqualifications"
(not being licensed under old standards and practices) causes
irreconcileable psychological HARM to those olde-tymers.

They will LOSE some of their bragging rights and rank/status/
privilege that made them so arrogantly "superior." Ho hum.

>> That's a good point. The reduction affects only those who have certain
licenses

"Incentive?" Incentive towards bragging rights, I'm sure.

Such seems to be a very important part of today's amateur radio,
almost as much as morsemanship...

>> Agreed - but it's still a reduction. And Carl said he would not support any
>> reductions in written testing. Now, all of a sudden it's OK because it's a

Everything to these olde-tymers is wrapped up in that pretty piece
of paper (suitable for framing). Change cannot happen until that
license certificate is officially modified by an official of the official
government. Officially.

>> I don't claim to. The person who wrote that something "doesn't comport" is

Irrelevant, Bill. At stake is the beloved rank, status, title obtained
under the old system. Old standards MUST remain.

That can NEVER change. To change means a personal threat
to bragging rights enforced by federal title/status/privilege.

>> >>If you support them, then by definition you are supoorting a reduction in

>
>HF-Bands are not only for EXTRA licensed hams from the US, and the
>expression "SANDBOX" means the whole spectrum accessible for radio amateurs
>all over the world.

Wasn't meant that way at all.

My philosophy is that anyone in any country who can pass the required tests of that
country and get the required license is welcome on the ham bands.

In the USA, parts of some bands are reserved for Extras. The USA has long had a multilevel license structure, designed to reward increased knowledge and skill with
more spectrum space.

>In the process of restructuring after WRC03 zillion of
>hams will be able to enter this spectrum.

How many will really do it, though?

And remember that the restructuring is determined by the governments of each country. The ITU sets minimum requirements - the signatory countries can have more requirements for a license.

>Most of them did not pass the "US
>GOLD CARD EXTRA" tests. They are given full HF privileges by the
>authorities.

Sure - that's up to the governments of their countries. And what US hams get is up
to the FCC.

>This will also occur in the United States in the near future.

You mean the FCC will eliminate the Extra class license? How and why?

>Do you realy think, your authority will step back from their voting at
>WRC03? Do you think they want to loose their face towards those other
>countries they were partnering at the WRC03?

I'm not sure what you mean.

If you're talking about the Morse code test, all that changed at WRC03 was that it stopped being an international requirement. Each country can now choose whether or not to have a Morse code test. So far, FCC hasn't changed any US rules.

If you're talking about the written tests, all that changed at WRC03 was that it stopped being a vague statement about each country setting its own standards and became an international recommendation with specific standards of what hams should know. Each country is expected to meet the standards in its own way. So far, FCC hasn't changed any US rules.
>
>They all are your fellow hams. Your friends, buddies, pals, or fellas. Why
>don't you try to do the same, as the rest of the worlds hams are doing to
>their hamfriends, stepping up now into the heaven of ham radio?

I've been in the heaven of ham radio for almost 37 years now, Helmut. Last night I worked an OK1 on 40 CW and an F5 on 80 CW with my 100W homebrew rig. Got the OK1 on the first buzz but there was quite a pile on the F5.

>Welcome
>them, elmer them, if you think they are not skilled enough, and give them
>the feeling of beeing welcome in your part of the spectrum.

Been doing that for almost 37 years now.

>Exept in the US
>and a few other countries, you can tell the license class from the callsign.

Sort of. In the US, the license class *sometimes* tells the license class. For example, all 1x2 and 2x1 callsigns are Extras, but Extras can also have other callsigns. I know hams with callsigns like WA3IYC who have been Extras for 30+ years.

>From all the others around the globe you cannot tell, if they've got their
>HF-privileges after the WRC without passing a test.

You're missing the point, Helmut.

What is being proposed by some is that some existing hams get a free upgrade to the next-higher license class without a *written* test that is required of everyone else. Some of us don't think that's a good idea.

>What will your reaction
>be? "Go home, this is MY PARTof the spectrum"?

No. But I will oppose changing the rules.

>There will be poor operational skills around for a while.

That's not the issue at all.

>Just recall YOUR first months of HF-operation.

October 1967.

>No master ever fell out of the blue sky, they all had to take
>their lesson and do her homework and practice.

But first they had to take the required tests.

I agree with all of that. But that code does not mean that I must accept
without protest any and all proposed changes to the ARS.
>
>--The original Amateur's Code was written by Paul M. Segal, W9EEA, in 1928.
>Nowadays there has to be added: global thinking

What does global thinking have to do with requirements for an amateur radio
license
in the USA? Maybe the rest of the world should adopt the USA's ideas.
>
>> Most of what is discussed here is amateur radio policy in the USA.
>
>> That's simply a result of it being US based and in English.
>
>And concerning this newsgroup as to be US-based and written in english
>language is not protecting you of beeing a ham. Act like, speak like and
>write like it is to the honor of amateur radio.

What have I written that is dishonorable? I have said that *all* who pass the
required tests and get the required license are welcome in *our* sandbox.
>
>> > > >So am I. They need to be tested though, and they need to take the
>> > > >test that other Extra's take.
>
>I've heard the same song across the bands after they dropped the CW-test to
>5wpm. Did it help anything?

I don't see where dropping the code test to 5 wpm helped much. A lot of
existing US hams
upgraded their existing licenses, but an even greater number did not. There was
a
very slight increase in the number of US hams. But not a large increase.

Several countries around the globe have dropped their Morse code tests
entirely.
Have they gotten lots more new hams as a result?

>Your authority ignored it. Do you think they did
>change their habit to please 10 percent of the american hams?

The USA reduced code testing to 5 wpm back in April 2000, even though
the majority of American hams who expressed an opinion to the government
wanted more than 5 wpm.

>> > > Exactly.

>> > > >> Be careful ... your "not in my sandbox" motives are showing.

See?

>> > What is "your sandbox"?
>>
>> I don't have one!
>>
>> > Where can I make a test to access 40m above 7.100 ?
>>
>> Move to ITU Region 2. Or convince your government to change the rules.
>>
>> The reason hams in Regions 1 and 3 don't have 7.100-7.300 is that
>> their governments wanted that spectrum for shortwave broacasting in 1938.
>> It's not the fault of hams or governments in Region 2.

To be even more specific: In the Cairo convention of 1938, certain central
European governments insisted on taking part of the ham band for SWBC.
Their allies in the Far East agreed. The compromise was that Region 2
kept 40 meters as 7000-7300.

And although those governments are long gone, it has taken more than
60 years to change things.
>
>You are right on this. It will get regulated after 2007 when the 40m
>allocation will be 7000 - 7200 exclusive for all hams worldwide. This was
>also concluded in Geneva.

Because Region 1 and Region 3 SWBC changed.

>> > Where can I do the test for usage of 146 - 148 MHz?
>>
>> Move to ITU Region 2. Or convince your government to change the rules.
>>
>> > This is your sandbox, I
>> > assume.
>>

If there is no difference in numbers, why make the change?

>Give yourself the cream upon the cake and think positive about the
>new situation.

I do!

>Showing anger and agressiv language against those beeing a
>"victim" of the restructuring process doesn't bring any good to the ham
>family.

I see far more anger from others who disagree with me. Your friend Len
Anderson is very angry and aggressive. He is not a ham and would not
make a good ham, judging by how he writes here.

>Not in your country, and not around the world. And where we cannot
>do anything against it, it's not worth to argue about it.

But maybe something can be done about it.

I don't think the written tests for a US amateur radio license with full
privileges should be made easier. In fact, I think they are too easy.
The *written* tests! Should I just be quiet about it?

>It is NOT negotiable.

Yes, it is. The USA has to meet the minimum requirements of the
treaty, but does not have to stay at the minimum.
>
>Here in Europe, we even did'nt have the time to try negotiating. The
>authorities of the various countries just signed the bill and thats it.

That's why I live in the USA. We have the right to argue and negotiate. It's
called the democratic process. Some of my distant ancestors invented it
thousands of years ago.

>Your FCC should do the same.

I disagree. Our FCC should go through the democratic process, not simply
hand down rules with no discussion.

>This would save you all here on this thread a lot of nerves.

Maybe. But discussion is part of the process.

Many here have disagreed with me without the need to resort to
such adjectives, Lennie...

It's just that YOUR conduct, lying and other anti-social
behaviour EARNED you the endearments..."You Reap What You Sew", etc
etc etc...

Embrace them, Your Scumminess...You earned them...They're yours
to keep. I am sure you're proud of them.

Let's be specific: It is because they will not have passed the exam
which the FCC says they must pass in order to qualify for a specific
class of license.

> Let's be serious here!

It is getting tougher to be serious when you persist in yanking our
lanyards.

> In the incentive license scheme the privileges gained have no bearing
> at all to the knowledge base in the sylabus for the license test.

Let's do this one in your manner: Whatever floats your boat. Life's
a--well, you know the drill.

> I'd strongly suggest the greater danger to personal or others
> life/limb is equally shared by Tech thru Extra as it relates to
> permitted VHF/UHF operating at the legal limit.

How many beginners do you know who run the legal limit on VHF/UHF. I'm
betting that the answer is "none".

They will not have met the qualifications for holding the higher class
license. No ifs, ands or buts.

> > >>Now you might argue that it's only a temporary or one-time reduction,

> unqualified and/or in what specific aspect(s) or priviliges
> they would be unqualified.

By your statement, you are supporting a watering down of both the
General and Extra class licenses. I'm quite certain that this is
something you stated that you'd never support.

> > >>And since it affects over 400,000 hams, it's not a small matter.

> spectrum from that of a General operating in the General
> spectrum of the same band at the same maximum permitted
> power.

So you do stand in support of reduced testing requirements and of the
elimination of incentive licensing. There can be no other explanation.
If your agenda extends not just to the elimination of morse testing but
to the watering down of the written exams, why not be bold? Come out and
say so.

> > If they are not qualified, then you are not only sending them upward

> The ARRL does not take that position at all...except for the "new"
> novice which would have greater HF privileges...but with limited
> power. Carl and I support the ARRL petition (except for the code test)

The League's position provides a "gimme" to tens of thousands by
granting a by on testing. It is apparent that if it can be done on a
one-time basis, it can be done permanently.

> > I refuse to believe that you are all that naive to think that we'll just
> > do this once
>
> Believe whatever makes you feel good.

Is that how you decide what to believe?

> > and no one will notice that suddenly the requirements will go up.
>
> The requirements won't go up...they will stay the same. The only
> thing happening here (if FCC approves) is the written test will
> be waiver one time for the particular ham going from Tech to General
> or Advanced to Extra.

You mean, those hams who will not have passed the exam to go from Tech
to General or Advanced to Extra. You mean a "gimme" for tens of
thousands.
Tell us again the motivation for such a thing. What makes it necessary
to do.

> > I remember promises of never accepting reduction in test requirements.
> > I remember the explicit distancing of personal opinions from NCI. But
> > here you all are, supporting reductions in the requirements for access
> > to HF. A pattern forms.
>
> Yea, yea...and with the music to twilight Zone in the
> background too.

I didn't hear music. I did read your words and Carl's words. What you are writing these days is at odds with the earlier statements. Your earlier statements which traditionally began, "all we want is..." sound disingenuous.

> Believe whatever you want, whatever floats your boat.

Opposition to the League's plan floats mine right now. I suppose your comment is better than one of Lennie's "TS" brushoffs.

Nonsense. There is nothing in life that is so insular that one cannot get a
"real feel" of it by doing similar things.

I've worked in commercial/scientific radio communications as well as being
an Amateur and there is a great deal of similarity between the operations -
there are licences, there are regulations, there are serious conversations,
there are "rag chew" conversations, there is problem solving and information
exchange. These is even a "siblinghood" (is that the PC equivalent of
"brotherhood"? ;-)) amongest the operators.

What exactly are you suggesting is so different in AR that it is completely
alien from any other activity?

> Ignorance would be to
> assume that because one has experience in another service, that all of
> his experience in that service directly transfers to amateur radio.

This is more accurate as there are some subtle differences between even very
similar activities.

Code Forever!!!

Right?

Damn near killed ham radio.

Necrology from QRZ:

I've been licensed since 1992, my old call was N8VZU. Currently I operate 99% CW/QRP and can be found on or near 14.060, or 7.040 most nights, if you hear me give me a call.
I do some contesting, (I took first place in the 2000 Ohio QSO Party for QRP, and first place for Ohio/Great Lakes Division SSB/QRP in the 2000 ARRL Sweeps) but mostly enjoy ragchewing.

I belong to the Flying Pigs, #-6, FISTS, #4985, QRP-l, #1404, plus a few more. Currently I manage the Sprints for FISTS.

I am a proud member and club call trustee for the Flying Pigs QRP Club, International W8PIG. We are dedicated to promoting CW, QRP, and most of all FUN! Our club motto: No Dues, No Rules, Just FUN. Membership is open to everyone, drop by http://www.fpqrp.com and join today.

You need to think of changing the sand...

>I don't see where dropping the code test to 5 wpm helped much. A lot of
>existing US hams
>upgraded their existing licenses, but an even greater number did not. There
>was a
>very slight increase in the number of US hams. But not a large increase.

tsk, tsk, tsk...there's only a few thousand or so OTHER hobby
activities that vie for attention. I'm sure you discount those as
inconsequential...

>Several countries around the globe have dropped their Morse code tests
entirely.
>Have they gotten lots more new hams as a result?

Was dropping the morse test requirement ALL about "getting more
hams?" I don't think so. Obviously you do.

>>Your authority ignored it. Do you think they did
>>change their habit to please 10 percent of the american hams?
>
>The USA reduced code testing to 5 wpm back in April 2000, even though
>the majority of American hams who expressed an opinion to the government
>wanted more than 5 wpm.

There were no more than 2300 Comments by individuals to FCC
NPRM 98-143. That is less than 0.3% of those licensed; a
couple of those were licensed with other countries.

There's over 5100 Comments on NOI 03-104.

"Majority?" I don't see it. But, if the ARRL said it was a "majority"
then everyone has to believe the ARRL. The ARRL can do no wrong.

>To be even more specific: In the Cairo convention of 1938, certain central
>European governments insisted on taking part of the ham band for SWBC.
>Their allies in the Far East agreed. The compromise was that Region 2
>kept 40 meters as 7000-7300.
>
>And although those governments are long gone, it has taken more than
>60 years to change things.

Tsk, tsk, tsk...the 40 m issue wasn't solved at WARC-79 and didn't get
any real start at any solution until WRC-03. It won't be close to solved
until WRC-07.

In the meantime, I would suggest a review of world political change
that happened between 1938 and 1955. Was rather a lot of change
that I witnessed. Take all the time you need.

>>Jim, it is not the difference in numbers, it is just the fact, that it
>>happend.
>
>If there is no difference in numbers, why make the change?

Right...maintain the status quo foever and ever. Yawn.

>>Showing anger and agressiv language against those beeing a
>>"victim" of the restructuring process doesn't bring any good to the ham
>>family.
>
>I see far more anger from others who disagree with me. Your friend Len
>Anderson is very angry and aggressive. He is not a ham and would not
>make a good ham, judging by how he writes here.

Tsk, tsk, tsk...still smarting over not getting the honor and respect
you think you deserve in newsgroups? :-)

Do you think your Amateur Extra class license puts you "above"
all others? :-) [of course you do...and you bitterly resent the
others not agreeing with you...]

>>Not in your country, and not around the world. And where we cannot
>>do anything against it, it's not worth to argue about it.
>
>But maybe something can be done about it.

Careful or you will be labeled "angry and agressive!" :-)

>I don't think the written tests for a US amateur radio license with full
>privileges should be made easier. In fact, I think they are too easy.
>The *written* tests! Should I just be quiet about it?

Right! No "quiet." Be ANGRY AND AGGRESSIVE. Every day
of the week... :-)

>>Here in Europe, we even did'nt have the time to try negotiating. The
>>authorities of the various countries just signed the bill and thats it.
>

>That's why I live in the USA. We have the right to argue and negotiate.

Except in this newsgroup where just anyone can come in! :-)

>It's
>called the democratic process. Some of my distant ancestors invented it
>thousands of years ago.

Oh my! The Greeks did it, but by males only.

The first practical application was in Iceland about 2000 years ago.
It was called the "Althing" in Scandinavian. :-)

>I disagree. Our FCC should go through the democratic process, not simply
>hand down rules with no discussion.

Oh? I thought you wanted the FCC to accept anything the ARRL
told them to do?

Saves time and energy by letting ARRL do all the dirty work.
That way you are free to "work" OKs and F5s. :-)

>>This would save you all here on this thread a lot of nerves.
>
>Maybe. But discussion is part of the process.

Except in here where "lesser" individuals are considered bottom-
feeding slime, unworthy of saying anything... :-)

It is VERY important to use PROPER PROCEDURE in all ham activity.

When hacking Western Union on the NTS, one MUST use the official
authorized radiogram forms. Net users may lose their jobs if the
official proper form is not used. All five of them.

Never at any time may other radio services' jargon, expressions, or any
other words except as officially permitted by league guides be used on
or off the air by devout amateurs. "Roger that" and "ten-four" phrases
are punishable by excommunication of any communication. The normal
penance is 100 Hail-Hirams and "sin no more" exhortations.

Proper civil courtesy on the air is to give everyone a "599" report, even if asking for repeats due to local noise. On 'phone all have superb diction and are perfectly understandable...always.

All amateur radios operate by laws of the league, not the laws of physics. Correct procedure is to always consult a Handbook, never any textbook about other radio services' equipment. Amateur radios do not work by such non-applicable laws. Only league books have official information.

The "amateur community" always rules on dedication and committment of all. Except for the Extras who are above criticsm and gods of radio.

All amateurs not expressing love, honor, and obeyance of morse code are bottom-feeding slime and shall always be treated as inferior trash not even worthy of contempt.

There, I guess this sums it up fairly well... :-)

>"brotherhood"? ;-)) amongest the operators.

There are also big differences.
>
>What exactly are you suggesting is so different in AR that it is completely
>alien from any other activity?

Several things:

1) Hams have a level of freedom pretty much unmatched in other services. Wide variety of modes, bands, technologies, and activities. No channelization or requirement to use certain types of equipment.

2) Hams are almost all self-funded and noncommercial, using their own equipment on their own time.

3) [this it the really big one] Amateur radio is, at its core, radio communication for its own sake. To other services, radio is but a means to an end, but to hams the medium really is a big part of the message. Or to put it another way, the ham's journey is as important, if not more important, than the destination.

This is why certain things from other services don't apply to hams.

The person watching TV usually doesn't care how the signal gets to the set - VHF, UHF, terrestrical, satellite, analog, digital, cable, fiber, whatever. All the TV viewer cares about is how good the picture, sound and program are.

The military communications folks don't care how the messages are carried, just so the messages get where they need to be, when they need to be there, without the bad guys knowing about them.

Do you know or care how your email and postings get to and from your computer? If you're like 99.99% of the online population, it's not an issue as long as it happens.

Heck, many if not most cellphone users don't even think in terms of "radio" - the cellphone to them is a telephone without wires, that's all. (In fact I have had people tell me that a cellphone is *not* a radio!)

The radio amateur does radio, for the most part, for purely emotional reasons. IOW, because it's fun, rewarding, challenging, educating, etc. "Radio for it's own sake".

This is why modes like Morse code, AM voice and Baudot FSK RTTY continue in use in amateur radio. Hams like them. They're fun, and they work.

>> Ignorance would be to
>> assume that because one has experience in another service, that all of
>> his experience in that service directly transfers to amateur radio.
>
>This is more accurate as there are some subtle differences between even very
>similar activities.

And some very big differences. Much of what is done in other radio services does not transfer to amateur radio at all. For example, every other radio service I know of seeks to eliminate the need for a skill in the operation of the radio equipment. They think in terms of "user", not "radio operator". And given their constraints, it may make sense to do so, because it is usually less expensive to buy sophisticated equipment than to pay a skilled radio operator. But to hams, radio operating skill is the whole point.

> "real feel" of it by doing similar things.

Nonsense, yourself. There are plenty of activities which might have
some outward similarities to other things but which are actually quite
different. Hunting with a shotgun is quite different than hunting with
a rifle. Even the aiming technique is very different. Driving the
family sedan on the roads and highways doesn't give one the feel for
Formula One racing. Being a Television station engineer doesn't impart
a feel for how to chase a weak one on 160m.

> I've worked in commercial/scientific radio communications as well as being

Oh, I can't think of a thing, Mark. Let's allow an artillery officer
who has never hunted game, decide best how game hunting should be
regulated.

You're playing with my words here.

A person that takes the Technician test, then becomes a General with no
further retesting.

A person that takes a Technician test, then a General test.

Which person has done more? Unless you are suggesting that the future
General test is simply the equivalent of the Tech test.

Wide
> variety of modes, bands, technologies, and activities. No channelization
or
> requirement to use certain types of equipment.

I suggest that you look at the FCC page and search for "experimental licence". These couple of snippets may be of interest to show its breadth:

"Any person or entity--corporation, individual, etc. that is not a foreign government or representative of a foreign government may obtain an experimental license."

"Any frequency allocated to non-Government or Government use in the Table of Frequency Allocations may be assigned under the Experimental Radio Service, except frequencies exclusively allocated to the passive services."

Use of non-approved equipment is also permitted with this licence.

> 2) Hams are almost all self-funded and noncommercial, using their own
equipment
> on their own time.

Agreed, but again this is not unique. Plenty of people including CB operators and pleasure marine radio operators in the same boat (pun intended).

> 3) [this it the really big one] Amateur radio is, at its core, radio

an
> end, but to hams the medium really is a big part of the message. Or to put
it
> another way, the ham's journey is as important, if not more important,
than the

> destination.

You are incorrect to assert that the medium is not important to others, especially in the scientific community. Radio propagation research by definition is interested in the medium.

It is also misleading to imply that the majority of Amateur have the medium as the primary focus of their activities. The majority of Amateurs use commercial equipment and spend the majority of their time chin-wagging. From their conversations, it is obvious that the conversation is more import than the medium.

> This is why certain things from other services don't apply to hams.
>
> The person watching TV usually doesn't care how the signal gets to the set -
> VHF, UHF, terrestrical, satellite, analog, digital, cable, fiber, whatever. All
> the TV viewer cares about is how good the picture, sound and program are.

While the person who watches TV may have no idea how it works, there is a complete army of people behind that tube that do know how it works and why it works. If one were to subtract the number of hams who cannot even fix a simple fault in their commerical rig, the odds would not be much different.

> The military communications folks don't care how the messages are carried, just
> so the messages get where they need to be, when they need to be there, without
> the bad guys knowing about them.

I'll bet its fair to say that most Amateurs do not understand how Packet, PACTOR or even just their rigs work. They simply plug in the boxes and off they go.

> Do you know or care how your email and postings get to and from your computer?

Actually, I do as I run my own servers.

> If you're like 99.99% of the online population, it's not an issue as long as it
> happens.

This is also the case for many Amateurs. Most would not know how their current rig works and they would neither have the expertise or equipment to find anything but the most trivial of faults.

> Heck, many if not most cellphone users don't even think in terms of "radio" -
> the cellphone to them is a telephone without wires, that's all. (In fact I have
> had people tell me that a cellphone is *not* a radio!)

As I said most Amateurs don't know how packet works or even how their Yaesu works. Under this defintion, most Amateurs aren't amateurs either. If one goes into particular instances, I've fixed radios for more than one full call that could not find that the battery wire had broken. Such anecdotes may be amusing, but have little value in the big picture.

> The radio amateur does radio, for the most part, for purely emotional reasons.
> IOW, because it's fun, rewarding, challenging, educating, etc. "Radio for it's
> own sake".

Certainly in the area I work, I have seen the scientists knock back very large amounts of money because it didn't have a research component that they found "fun, rewarding, challenging, educating, etc."

> This is why modes like Morse code, AM voice and Baudot FSK RTTY continue in use
> in amateur radio. Hams like them. They're fun, and they work.

Morse - still used commercially, in the forces and aviation (ident calls).
AM voice - still used in broadcasting.
FSK RTTY - still used as anyone with a communications rig can tell you.

None of these are unique to AR.

There is no doubt that these modes work and "fun" to some people. This is true even if you are a commercial operator. There are plenty of people who actually enjoy their work.

BTW, not all hams like these modes. Many people don't like Morse, many also don't like AM because of its bandwidth, especially in the lower bands and most Amateurs don't use RTTY with or without the clunking teleprinter.

> >> Ignorance would be to
> >> assume that because one has experience in another service, that all of

> given their constraints, it may make sense to do so, because it is usually less
> expensive to buy sophisticated equipment than to pay a skilled radio operator.

How many Amateurs still neutralise their power amplifiers? No many. Why? Because they have decided to buy (in most cases not build) more sophisticated equipment that reduces the skill required to operate the radio. There is no difference. I don't know too many Amateurs who go to buy a rig and want the one that is the hardest to use.

> But to hams, radio operating skill is the whole point.

Unsustainable if you listen to the bands. Most people do not even comply with the statuatory requirements for identification, let alone push the envelope of operating skills.

Are you suggesting that randomly monitoring the Amateur Bands for a few hours would show a very high level of operating skill? I wouldn't bet the farm on that one, would you?

As I said, AR is by no means "unique" in what it provides and there are many people in the radio field, even if they don't hold an AR licence that would have a "really good feel" of what the Amateur Serice is all about bases on their other experiences.

It concerns me when Amateurs attempt to tell others that AR is "unique" and that a non-amateur could never underestand what it is all about, because all it does is reduce credibilty.

By taking this tack, even a licenced Amateur would not be able to get a
"real feel" as it is just about 100% certain that they will have different
interests and priorities than you.

I take a less metaphysical approach to "real feel". I mean it is relatively
easy to determine what Amateurs do and there are plenty of related things
(CB & marine radio, electronics kits, regulations, chat rooms, phones, etc)
so that a person could reasonably be expected to be about to judge whether
this would be interesting - before they went to the effort of getting a
licence.

> Take care 73 KI3R Tom Popovic Belle Vernon Pa.
>
> Enjoying ham radio for what it is to me ..not what others perceive it or
> wish it to be.

As it should be, but that does not prevent unlicenced people from knowing what the hobby is about. Whether they would enjoy those activities is a matter of personality, not of holding a licence.

regards,
Mark

>
> How tough was the studying for a license for which there is no exam? ;-)

Are you really just clueless or are you just trying to be a smart arse? In
case it is the former, this page may help:

http://wireless.fcc.gov/commoperators/

I'm not under FCC regulations so it's a real shame that I appear to know
more about them that you do.

> > there are regulations,
>
> The regs aren't very much alike, are they? In fact, such point-to-point

> operation.

Radio regulations cover a truckload of licence types and the regulations are
many and varied. Did you read about your regulations and not understand; or
do you just make this stuff up as you go?

> > > Ignorance would be to

I didn't agree with him. I disagreed with you. His thoughts, past or
otherwise, right or wrong, aren't relevant.

You need to purchase a seperate GMRS Licence
from the FCC. Think it's $75 for 5 Years. Not a
bad deal really and it's cheaper and likely more
useful than a subscription to QST... ;)

2672. lookin for BC-610

lookin for BC-610. got truble with some local CBs
an needing to see if the bc-610 can clear the channul
up a bit.......bc-610 put out maybe 700 watt A.M.
i think but anyway it going really clear the channul
up! where can i get a bc-610 ?????

There's a lot more to the marathon than "hitting the wall", which doesn't
happen

to all marathoners anyway. (I've run two marathons and numerous shorter races,
btw)

>Service, except frequencies exclusively allocated to the passive services."
>
>Use of non-approved equipment is also permitted with this licence.

Not the same thing! Each experimental license is granted for a specific
purpose,
isn't it? The applicant has to make application for a specific reason, not
general
experimentation, and the license is limited to the specific experimentation
applied for.
It's not a general-purpose thing like a ham license.

How many experimental licenses are currently issued by FCC? There are over
682,000
US ham licenses issued to individuals.

How many new experimental licenses were issued by FCC last year? FCC issued
over 20,000 new ham licenses in 2003.

>> 2) Hams are almost all self-funded and noncommercial, using their own
>> equipment on their own time.
>
>Agreed, but again this is not unique. Plenty of people including CB
>operators and pleasure marine radio operators in the same boat (pun
>intended).

Those services are not about "radio for its own sake" and allow only a very
limited choice of channels and modes.

>> 3) [this it the really big one] Amateur radio is, at its core, radio
>> communication for its own sake. To other services, radio is but a means to
>> an end, but to hams the medium really is a big part of the message. Or to

>> it another way, the ham's journey is as important, if not more important,
>> than the destination.
>
>You are incorrect to assert that the medium is not important to others,
>especially in the scientific community. Radio propagation research by
>definition is interested in the medium.

Only to find out how it works.
>
>It is also misleading to imply that the majority of Amateur have the medium
>as the primary focus of their activities. The majority of Amateurs use
>commercial equipment and spend the majority of their time chin-wagging.
>From their conversations, it is obvious that the conversation is more import
than
>the medium.

If that were true, most of those conversations would have moved to other means
of communication long ago.

>> This is why certain things from other services don't apply to hams.
>>
>> The person watching TV usually doesn't care how the signal gets to the
>> set - VHF, UHF, terrestrical, satellite, analog, digital, cable, fiber,
>> whatever. All
>> the TV viewer cares about is how good the picture, sound and program are.
>
>While the person who watches TV may have no idea how it works, there is a
>complete army of people behind that tube that do know how it works and why
>it works.

That's true, but it's not the point. The TV viewer and the ham are both the
"end users",
but it makes no difference to the TV viewer whether the program got to him/her
by radio,
wire, etc. There *is* a difference to the ham whether the QSO is by radio or
landline.

>If one were to subtract the number of hams who cannot even fix a
>simple fault in their commerical rig, the odds would not be much different.

That's not the "how" I was referring to. A ham cares that it's "communication
by radio" - the TV viewer doesn't.
>

>How many Amateurs still neutralise their power amplifiers?

I do.

>No many. Why?
>Because they have decided to buy (in most cases not build) more
>sophisticated equipment that reduces the skill required to operate the
>radio.

I build my ham rigs, either from scratch or kits.

>There is no difference.

Yes, there is.

Neutralization is an alignment adjustment, not part of operating the rig.

>I don't know too many Amateurs who go to buy
>a rig and want the one that is the hardest to use.

Not the point. Modes like ALE and conventions such as channelization have
not had much acceptance in amateur radio, even though very widely used in
other services.

>> But to hams, radio operating skill is the whole point.
>
>Unsustainable if you listen to the bands.

I do, and that's why I make the observation.

>Most people do not even comply
>with the statuatory requirements for identification, let alone push the
>envelope of operating skills.

Where have you noticed that? I see just the opposite on the bands and modes I
use.
>
>Are you suggesting that randomly monitoring the Amateur Bands for a few
>hours would show a very high level of operating skill? I wouldn't bet the
>farm on that one, would you?
>
No, I'm saying that hams value operating skills, even if they don't always have
the highest level of them. Someone who plays a guitar for fun usually values
skill at doing so, even if they're not as good as the guy on the CD.

>As I said, AR is by no means "unique" in what it provides and there are many
>people in the radio field, even if they don't hold an AR licence that would
>have a "really good feel" of what the Amateur Serice is all about bases on
>their other experiences.

Maybe. But in general I'd disagree.
>
>It concerns me when Amateurs attempt to tell others that AR is "unique" and
>that a non-amateur could never underestand what it is all about, because all
>it does is reduce credibilty.

If amateur radio is not unique, why should it exist?

Which, as anyone familiar with incentive licensing, has
NOTHING to do with actually being qualified to do anything
specific to amateur radio based on the additional privileges.

> > Let's be serious here!
>
> It is getting tougher to be serious when you persist in yanking our
> lanyards.

Me? I just support the ARRL petition....I didn't propose
it. Seems you don't like anyone giving an opinion
contrary to yours. If you don't agree with me, I really don't
give a damn...as the ONLY arbiter of the outcome that
matters is what the FCC will think and do.

> > In the incentive license scheme the privileges gained have no bearing

> something you stated that you'd never support.

If you want it clearer...I support the ARRL petition.
In doing so, I acknowledge that there will be, if implemented
as submitted, a ONE_TIME reduction of test requirements
for those hams that get free upgrades. I also recognize and
understand that other than the one-time upgrades, there
will be NO reduction in written test requirements for Extra
and General.

Clear enough for you?

> > > >>And since it affects over 400,000 hams, it's not a small matter.

The question keeps coming up because some people can't
understand the difference between a ONE-TIME waiver as
opposed to a PERMANENT change in requirements.

>
> So you do stand in support of reduced testing requirements and of the

> elimination of incentive licensing.

I do NOT support a permanant reduction of written requirements.
I support a limited incentive system but I wish the additional
privileges bore some relationship to the additional knowledge being
tested for.

There can be no other explanation.

I just gave you one above. The fact that I recognize the reality of
privileges vs knowledge being virtually non-existent, and that
I am willing to state the obvious, does not mean I must, therefore,
oppose incentive licensing.

> If your agenda extends not just to the elimination of morse testing but
> to the watering down of the written exams, why not be bold? Come out and
> say so.

Because it isn't true!

> > > If they are not qualified, then you are not only sending them upward

> are writing these days is at odds with the earlier statements. Your
> earlier statements which traditionally began, "all we want is..." sound
> disingenuous.

What is at odds with you is that you don't understand the difference
between ONE-TIME and PERMANENT change. If it makes
you happy to think that supporting a one-time waiver makes Carl
and I supports of reducing requiremnts, then you are free
to enjoy your own beliefs.

> > Believe whatever you want, whatever floats your boat.
>

Sorry Mike, your logic is seriously lacking. My
stateing the obvious about privileges vs license
in no way leads to the conclusion that I must, therefore,
oppose incentive licensing. Even Jim, N2EY has
acknowledged what I have said regarding privileges
vs license class based on written test knowledge.

> be consistant.

The problem, is that there isn't any accepted relationship
of privileges vs license to apply a truly knoweldege
based upgrade system that links the additional privileges to actual
written test knowlede.

I do not dispute there is a one-time difference. That is what happens
when there is a one-time waiver.

>
>Because there's no real harm to anyone...

I say there *is* real harm to the ARS.

However, let's explore your claim for a bit and see where it leads.

You say that the free upgrades are OK "Because there's no real harm to anyone...". I've also seen it justified by "the difference between the Tech and General written tests is not that large".

If that's true, then what would be the harm is simply dumping the General class question pool completely and using the Technician pool in its place, with slight modifications to include General HF privs?

Who would be harmed by such a change?

By the same token, we could resurrect the old Advanced written and use it in place of the Extra.

>and if you want an
>incentive licensing scheme to be retained, this does it

I disagree! It works as a disincentive. Why should anyone study for an upgrade if there's a chance for a freebie? Would you you pay $500 for a new computer if you knew that next month it would go on sale for $300?

>plus it simplifies licensing and regs for the FCC and does it in one
>snapshot of time.

ARRL proposed similar freebies before and FCC said no, even though it would simplify the licensing and regs.
>
>> >> If you support them, then by definition you are supoorting a reduction

>>
>> That's a good point. The reduction affects only those who have certain
>> licenses on a certain date.
>>
>> But it's still a reduction for a very large number of hams.
>
>Agreed.
>
And that's the point: Folks like Carl who said they'd NEVER support ANY reduction are now supporting a reduction because it's a one-time thing. And ignoring the fact that it affects a huge number of hams.

Free upgrades for Techs would affect about 322,000 hams. Last year we got about 20,000 new Techs, so the proposed freebie would affect as many existing hams as the new ones we might get in the next 10-15 years.

>> >THAT is the critical difference.
>> >
>> And it raises a critical question: Why is it OK as a one-time thing but

>> not as a permanent change?
>

It has been touted as the boogieman for years. Now we see that it wasn't.

And let's suppose FCC enacts the ARRL proposal, and even dumps Element 1 for
Extra as well. And suppose we don't get a huge increase in the number of new
hams, just as we didn't after 2000.

You watch - there will be more proposals to further water down the writtens.

>> >> >your arguments are just plain lame

>of new hams rushing to become techs before the FCC
>implements free upgrades on a certain date?

Yep. Plus a huge drop in upgrades. Why not? "We're having a one-time sale - get 'em now!"

Back in 1951, there was a similar one-time sale. FCC announced that they were closing out the Advanced/class A and replacing it with the much harder to get Extra at the end of 1952. But existing Class A/Advanceds would have the same privs as Extras. There was a flood of folks upgrading to beat the price increase.
>

I'd ask you to please CITE a verifyable example of someone trying
to STOP some form of experimentation or "advancement of the art",
Skewart, but I know that woulod go unanswered...

Of course I'd not expect much in the way of facts from someone
who thinks "advancement" is the creation of channelized "Colt" class
licenses and thinks MURS is impervious to abuse.

> they are actually PRO-ACTIVE in their actions. I used to think it was

You have yet to "prove" any tantrum throwing or examples of
"kicking and screaming" as you describe it.

Like Lennie, I believe you to be misusing adjectives to create an
untruthful representation of actual events.

Down here we just call if lying.

As for "PATHETIC",....that's what I'd call YOUR "vision" of the
future of ANY radio service. Your child-like obsession with "MURS"
being an example of your own myoptic anomoly

> http://groups.yahoo.com/group/MURS-OPEN

Case in point...

> part of the direct communication ?

You will find that the FCC considers "family" to be the residents
of the same household. If by "family" you mean anyone in your DNA
chain regardless of where they live, you'd find the FCC would frown on
that, regardless of whether you were on vacation or not.

> One license per family ?

Same household...Not everyone in the same DNA strain.

Steve, K4YZ

Not according to Hoyle.

Mark, you must first understand the mind of Heil and Heil apologists.
Not only should an amateur NOT know the rules of another country, but
he MUST NOT know them!

So if you should happen to know the US FCC rules, you must disregard
them, i.e., you must pretend not to know them.

2685. Sex Discussions on 2 Meter Repeater

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-15 15:55:43 UTC
From: Bob <none>
Message-ID: <d5cc4b87fce55a73d6193e5a16421709@news.teranews.com>
Source record: 87415

There was a round table talking about the Massachusetts constitution change regarding gay marriage. They were asked by a listener if it was appropriate for amateur radio? They said they were not in any violation. The conversation started to get worse.

"Why should I care if men having sex with men"

"I know a lesbian couple who raising children and they are got sperm from a sperm bank"

"Two gay men adopting and raising children"

"Sodomy"

Repeater was shut down by control operator after he found out 45 minutes later.

They want to go to the ACLU because they say their 1st amendments rights for free speech were violated and they are going to also file complaint with the courts.

Question to all is

Did they violate part 97 of FCC regulations OR Did the control operator violate their 1ST amendment rights

Considering that you support a plan that supposedly gives a huge chunk
of hams a free upgrade, then supposedly makes it harder for hams coming
into the service after this giveaway, I'll take your concerns about my
logic under advisement, and with a huge grain of salt.

Agreed. I've said for a long time that there is no *practical* need for
any test regimen at all. This isn't the old days. If I were so inclined,
I could buy my equipment, pay someone to put up the antenna and put the
station together, and then teach me how to mash the PTT button. Then get
on the air and yak away. No knowledge needed. All the knowledge we look
for in a Ham OP is arbitrary and must be something we decide upon.

Perhaps my cynicism sees this one time thing as the salesman getting
his foot in the door. It's where I see the disconnect with logic. If a
testing regimen is sufficient for qualification one day, it should be
good enough the day after, unless there is a pressing reason to increase
the qualifications. There will be no compelling need to increase the
qualifications the day after the "one shot" upgrade.

>>
>>You're playing with my words here.
>
>
> No, you are incorrectly stating the aspects of the ARRL
> petition.

All actions have consequences. I know exactly what the aspects of the ARRL petition are. They are allowing another agenda (IMO) to color their thinking on the issue, and are trying to shoehorn their agenda into it, along with giving some lip service to those members that still want Element 1 tested.

<Speculation alert>
Their agenda, if I am correct, is that they want lots more people with HF access. This will have two immediate effects in their view.

Effect 1 is that there is a pretty big divide in the ham radio neighborhood regarding the ARRL. Hams that have only VHF and up access tend not to belong to the league, and hams that do have HF access are more likely to belong. If a ham has hf access, they will be more likely to join perhaps. They look at the possibility of a good size chunk of these 400,000 upgraded hams to join up.

Effect 2 is that these upgrades hams will make a great number to trot out when fighting spectrum threats "Look at all the Hams that will be negatively affected by BPL, etc.". Double that number, and it looks all the more impressive.

<speculation mode off>

But as with all side agendas, people tend to get caught up in the agenda, and lose sight of those consequences. And the consequences here are that a powerful argument is provided to make HF access test requirements at the Technician level permanent. If it was good once, it should continue being good until circumstances force a change. And I don't see any logical way around that.

Will these Tech level people be able to get on HF and work? Of course. Plenty of people are running high power rigs on 11 meters, and they haven't taken one test. So the tech's will have one foot up on them.

As I've said in the past, the service is what we want it to be

>>A person that takes the Technician test, then becomes a General with no
>>further retesting.
>>

>>A person that takes a Technician test, then a General test.
>>
>>Which person has done more? Unless you are suggesting that the future
>>General test is simply the equivalent of the Tech test.

Strictly speaking, they did not violate any laws. What you have stated
was not obscene.

However, they were exercising poor judgment on the air. You don't know
who is listening out there, and it just isn't a good subject to have
kids listening to.

Other subjects that fall under the same problem:

religion, politics, anything that is likely to generate a strong
emotional response and controversy.

Nothing is stopping them from talking like this tho'.

But! They have no case. The repeater control op is allowed to shut the
repeater down for whatever reason s/he sees fit. If the control want's
to, they can shut it down every time they hear a callsign starting with

W! They are voluntary things.

Let 'em take it to simplex, or get their own private repeater.

The concept that privileges granted must have a direct correlation to the test material is a fallacy. The additional privileges are a reward for doing more work in the overall field of amateur radio. Many rewards in life have no direct relationship on the material itself. Starting in the home, some parents give their children money or privileges for getting a good grade. The reward has no relationship whatsoever to the accomplishment. In college, you get your degree after fulfilling ALL the requirements. Some of the requirements are imposed not because they have any relationship to the student's major but are considered appropriate as part of a well rounded education.

And how could the existing ham community possibly elmer these 300,000+ new HF users should they all decide to be active shortly following that free upgrade. I hate to think of the resulting SSB DX pileups as it is pretty bad now. If a free upgrade goes through and significant numbers move to HF within a short period of time, I suspect that we'll see a lot more DX stations "hiding" in CW.

2697. Why the ARRL proposed upgrading Technicians to General

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-15 17:26:38 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0402150926.3bf1416e@posting.google.com>
Source record: 87423

I understand why the ARRL proposes free upgrades from Technician to General. The assumptions:
1. The restructuring has to limit the number of license classes to 3. Thus, the Advanced license and either the Novice license or Technician license must be eliminated.
2. The restructuring must produce no downgrades.
3. The closing of the Novice class in the restructuring of 2000 was a major loss. So the Technician license should be eliminated but the Novice license should be reopened.
4. The only way to eliminate the Technician class without downgrading the existing Technicians is to automatically upgrade all Technicians to General.

I still disagree with the ARRL's proposal, though I can now see the reasoning behind it. I think the flawed assumption is #3. If the closing of the Novice class was such a major loss, then why was the No-Code Technician license so much more popular than the Novice license during the years when both entry-level licenses were available? The FCC closed the Novice license for the same reason General Motors closed Oldsmobile - not enough takers.

I'd prefer to see all Novices and Technicians merged into a new Technician class and be granted Tech Plus privileges. This would be compatible with a 3-license system. Nobody would lose privileges, but all automatic upgrades would be modest.

As many have suggested, I think the ARRL proposal may have been a PR move. Although changing the rules is the FCC's job and not the ARRL's, anything that the ARRL could have proposed would have generated a firestorm of controversy. The ARRL had to propose the retention of the Morse Code exam requirement for the Amateur Extra license to appeal to the proponents of Morse Code testing. To appeal to the No Code Technicians feeling intimidated by the Morse Code exam requirement, the ARRL proposed upgrading them to General.

Their first amendment rights were not violated as they could have gone to simplex to continue. The repeater owner or control operator has every right to shut it down if he/she doesn't like the way in which the repeater was being used. Repeaters are PRIVATELY owned by individuals or clubs. They are NOT public venues. As such the owner or control op has every right to shut it down.

I doubt that it was a violation of part 97 but that would be open to interpretation. A lot would depend on the language used in the discussion.

While the 1st amendment protects free speech, it does NOT give the speaker a right to force anyone to listen to it. On a repeater they are essentially trying to do just that.

The control operator sets the rules for his/her repeater.
The 1st amendment ONLY protects limitations
imposed by government. If I want to prohibit
disussions of (any subject whatsoever) at a party
I host, I have every right to do so. If someone
decides to violate my prohibition and I, therefore,
kick him out of my party, he has NO 1st amendment
issue with me at all.

> gets made and that all the newly upgraded people get on HF, how is the ham
> community supposed to "elmer" 300,000+ new HF users all at once?

Do you really believe for a second that if the upgrades take
place that there will suddenly be 300K people "on-the-air"
in HF that haven't been? If yes, I have a nice bridge in
Brooklyn I'd like to sell you.

Reality check...
1. How many Techs now own an HF rig at all?
2. How many, if upgraded will buy an HF rig?
3. How many Techs are spouses or family members
of an existing ham who is already General, Advanced or Extra?
4. How many of existing 300K techs are SK or otherwise
inactive anyway?

As for "elmering" those that would become Generals, I'm
sure many of us are willing to help anyone that asks for help.

Cheers,
Bill K2UNK

IF that is what you think must be the only way this can be implemented
then YOU file your coments as such or file your own petition.

> By the same token, we could resurrect the old Advanced written and use it
in
> place of the Extra.

Ditto my last comment.

> >and if you want an
> >incentive licensing scheme to be retained, this does it

upgrade
> if there's a chance for a freebie? Would you you pay $500 for a new
computer if
> you knew that next month it would go on sale for $300?

The above is ONLY a prospect for the period of time between when
the FCC announces their decisin and the actual implementation
date for free upgrades. Might someone today look at what the
ARRL proposes and now, on the hope the proposal goes through,
decide to do nothing towards upgrade? Well I'm sure some will
do exactly that. For now, the proposal is in the public arena and
that is just the way things are.

> >plus it simplifies licensing and regs for the FCC and does it in one
> >snapshot of time.

>
> ARRL proposed similar freebies before and FCC said no, even though it
would
> simplify the licensing and regs.

So what. Are you saying the ARRL should not have made the
proposal because it rejected a former upgrade proposal?

Ultimately the FCC will decide. I may hazard a guess as to how the FCC
will rule, but that's all it would be...a guess. Until the FCC
sings on this proposal, none of us know for sure.

> >> >> If you support them, then by definition you are supoorting a

Neither Carl nor I are ignoring the numbers involved. We fully
acknowledge the numbers you have posted...which anyone can get
from several database and web site sources anyway. Both Carl
and I support the ONE-TIME upgrades with full knowledge of
the numbers.

> Free upgrades for Techs would affect about 322,000 hams. Last year we got
about
> 20,000 new Techs, so the proposed freebie would affect as many existing
hams as

> IOW, Carl's "never" didn't mean "never", it just meant "until I change my
> mind".

The reality is that words like always and never are usually (I almost
said never :-) too restrictive and subject to critisism when other
factors come into play that one might not have considered before.
I try to avoid use of always/never, but have, I'm sure used them
without thinking about it at the time.

> >> >You and I can disagree about the reason's

>
> Who would be harmed by a permanent reduction?

It would then, truly lower requirments on a permanent basis.
Neither Carl, you nor I want that. Or have you changed your mind?

> >> >> And since it affects over 400,000 hams, it's not a small matter.

You made my point.

> >With this, no one losses anything.
>
> If the existing classes are not given free upgrades, nobody loses anything
> either.

True, but it doesn't "clean-up" the myriad of different licenses that
exist and would continue to exist for decades more. Clearly you
disagree as to the need to "clean-up" the licensing and, I'd guess you
will file comments stating it as such. For now, you and I simply
disagree on the need. I'm not going to waste time
trying to change your mind. The ARRL petition is quite
clear on the why.

> >> >Why, because no one losses any privileges.

IF the FCC goes with the ARRL proposal, there is sufficient arguments
there to counter argue.

> >> >Bottom line, 2 years from now no one will care.

> >
> >SWAG applied with common sense.
>
> They said the same thing in 1969. I was there.

I have learned the folllowing basic instincts regarding how people
react....take something away from someone and they resent it
just about forever. Give something to someone but not someone else
and the one that didn't get the freebie rarely cares or thinks about
it for long. That's grass roots political reality 101.

> >> In the past 12 months, FCC issued over 20,000 new ham licenses. Most

happen..

Good grief. I never said that at all. The reality is,
in the end, the FCC makes the final decision. I didn't
say you should not oppose any aspect of the ARRL
petition you want. You can continue to
oppose and file whatever you want with the FCC
if it (FCC) decides to implement free upgrades.
It is a free country, express your opinions all you
want.

> >> 20,000 in the past 12 months.

20K is only about 3% of all hams. Not a very big
number in that perspective.

> >We'll likly lose that many to attrition this year alone. Look at

Just look at the declining Novice and Advanced numbers.
Speroni data doesn't show any significant percent of "grace period"
renewals.

writtens.

If the "new" NOVICE doesn't work, then some probably
will. I can't know or be aware of everyone that is
or wants to be a ham. BUT, until it does, this is
just an academic discussion to which my participation
will be limited.

> >> >> >your arguments are just plain lame

sale - get
> 'em now!"

The ONLY drop in upgrades that would benefit anyone
is the Techs from a new ham perspective. We already see
only a negligiable amount of Novices upgrading to
Tech or Advanced upgrading to Extra.

> Back in 1951, there was a similar one-time sale. FCC announced that they
were

get
> Extra at the end of 1952. But existing Class A/Advanceds would have the
same
> privs as Extras. There was a flood of folks upgrading to beat the price
> increase.

Understood, but if we only look at already licensed hams,
the ONLY group that could quickly upgrade to benefit from
a free upgrade later is the existing Novice group...34K
by your numbers at most...or about 5% of all hams.

> >> >> >and your "someone might

> If he had to, maybe. But he didn't have to.

So in reality, you have no clue as to Carl's ability
or not to pass similar tests that you once did. If correct,
why make such a personal statement you can't
back-up?

> And he couldn't pass the other tests I had to take.
>
> And he didn't do it at 16 years of age, with no professional background. I
did.

Who gives a damn how old you or I was when we passed
certain tests? And as to whatever other tests you are talking
about, you realy have no knowledge of Carl's competence
and/or technical expertise in the field of radio and making the
statement: "And he couldn't pass the other tests I had to take."
is just inflamatory rhetoric.

Which would, I think, foster more hams to learn and use morse code
if they really want that hot DX. And if more hams didn't learn
morse to work those DX stations, that'd give more opportunity
to work them via DX to current code capable hams. In either
case it sounds like something the code enthusiasts should be real
happy about.

> By taking this tack, even a licenced Amateur would not be able to get a
> "real feel" as it is just about 100% certain that they will have different
> interests and priorities than you.

As well it should be ... the hobby-service-what ever has a wealth of deversity to offer but in the context of amateur radio. Any thing else for the non-professional radio affecionado unless he has a ticket would by defination not be amateur radio. Am I "dissing" those who don't have the exalted ticket? Nope .. I knew a fellow who could copy 45 WPM and never had a ticket but loved to listen to high speed CW on the ham bands. He said he would rather be a SWLer ..and this guy never was a military or commercial op.

>
> I take a less metaphysical approach to "real feel". I mean it is relatively
> easy to determine what Amateurs do

Not really ...not that is is such a big deal but I find you are falling into the trap that a lot of our "expert" hams out there fall into ....that is one of projection of one's knowledge to another. I really read with a chuckle those who say the test is too easy .. a give away. Again prospective. The guy or gal who is just starting out with no basis is overwhelmed and needs support with the simple things. I see this time and time again with our club's yearly no-code classes.

and there are plenty of related things
> (CB & marine radio, electronics kits, regulations, chat rooms, phones, etc)
> so that a person could reasonably be expected to be about to judge whether
> this would be interesting - before they went to the effort of getting a

It's not obscene by any stretch of the imagination. 1st amendment rights
don't really apply under Part 97 but if you look at it. All the words
used are low in value to offend per se, but high in emotional offense
values.

Can't hide for long ....how long before it will be wall to wall "fone"????

> Which would, I think, foster more hams to learn and use morse code

Nope Bill .... it will foster a concerted movement to turn the CW subbands
into SSBville. The mode will die or at best be put into a historical
preserve ...maybe like the bottom 20 kcs of the 30 meter band.

> if they really want that hot DX. And if more hams didn't learn
> morse to work those DX stations, that'd give more opportunity
> to work them via DX to current code capable hams. In either

Bill I wish you were right ...I say IF they were interested in CW DX they
would be there now not waiting for the tooth fairy to leave them the freeby
under the pillow at night

> case it sounds like something the code enthusiasts should be real
> happy about.

Oh yes Bill I am REAL happy about it ...I can't wait to see the subbands go
the route of "gentleman's" agreement and not defined regulation. The idea
of novice enhancement should have occured years ago with the novices gaining
all CW subbands. But nope the "experts" out there kept them in the ghettos
as 4th class citizens. Attempts years ago to even try to improve this was
met with derision from the establishment. What!!! 5WPM on my belovid bottom
25 kcs. Never ... I will never share this DX with anyone save my speed
peers. What would Hiram say?? So guys don't blame the "foneists" totally
for your troubles as we missed out bigtime in strengthening our ranks and
mode.

Of course they won't all become active. I suspect a sizable percentage
will remain on VHF where they are now (tech's).

And if it goes through, since the F.C.C. and the ARRL have decided that
they are qualified, they will need no help.

Of course! One thing I can't stand is the p**sy attitude of some OF's
toward newcomers. I'll be happy to Elmer these folk.

I'll probably point them toward one of the General Study guides, or
even the old General Question pool for one thing. Operation of a station
will be another thing, and hopefully we can get them off to a good
start. IMO they would be at some handicap at the beginning.

> working at WLW.

I'm fairly familiar with that area, been in and out of the airport any
number of times on biz in Cincinnati and in KY. Where is WLW vs. the
airport?

USAir provided me with another of their "adventure flights" going in
one afternoon. Unbelievable summer downpour, incoming flights were
kept circling. Maybe 45 minutes after the left seat announced that we
were going to be on hold "for a few minutes" he announced that we "had
a fuel problem" and that he was on final ready or not. Splash. Looked
at first like he landed in the river. That was the afternoon the
Weather Service measured three inches of rain in one hour at the
Cincinnati airport.

Whew. You hit some more buttons with this one. I like the T1 better
than the S1. But the K4 is the ultimate classic PRR power.

http://prrsteam.pennsyrr.com/prrt1.html

Raymond Loewy, Dad and me . . .

Dad . . at sixtysomething he decided he'd had enough "family cars" and announced that he was gonna buy a Corvette. Only over Mom's dead body he was gonna buy a Corvette. Back to the drawing board. "OK, I'll buy a Studebaker GT Hawk". 1963. Mom didn't bark as much at that one so he ordered the Hawk. But with a twist. He also bought a monster Packard V8 engine with two four-barrel pots. The Hawk and the engine arrived at the Stude dealer and Dad delivered 'em to the Three Js speed shop in Wilmington DE. Mom being unaware of what was going on of course. They did some engine, exhaust system and suspension mods then shoehorned the engine into the Hawk. "The rest is history . . " The thing ate Corvettes for breakfast . . It still exists in a barn near Coatesville.

Loewy was one of my idols when I was a kid. I had some talent along those lines and was bound and determined to go to the Chicago School of Design and study under him. Going into 9th grade Dad told me I had to decide what I was going to do with my life and tossed the Sunday Inquirer help wanted classified ads section at me. No ads for artists. No ads for industrial designers. No ads for illustrators. Four pages of ads for engineers. End of.

And the gene lives on. I have a young niece who recently graduated from the Pratt Institute industrial design program. She's unbelievable. Two weeks into her first summer student internship she came up with a compartment latch for some Volkswagen bus which her employer's ID group had been wrestling with for months. They faxed her sketch to VW, a VW functionary called back immediately and told 'em "Yeah, that's it, run with it!" They slapped patent papers on it and put it into production.

> I bought an S-40A from W7LR a few years back.

Still have it?

> The design is still
> stunning.

I'm not sure if I was ever aware of Loewy's role in the S-40 or not. But I am now. It's definitely a "coherent" design. That was his trick, integrate form and function. Not much of a rcvr though.

> W4JBP willed me his 1937 Hallicrafters Sky Challenger years back.

. . . there's a gooder . . . get it yet?

> He
> bought it new from Steinberg's appliance store on Vine Street in
> Cincinnati. Steinberg's sold ham gear through the end of 1968

That surprising, that was pretty late in the game. We didn't have any appliance stores selling ham gear that I know of but a lot of the electronics parts distributors which catered to the radio & TV service and industrial sectors had "ham corners". The last of those also

closed in the 1968 timeframe. I have an HRO a half hour from here in tax-free DE, makes life a lot easier. Except I'm still stuck with Radio Slack for parts locally.

> K8CFT, who administered my Novice exam, had a Globe King 500-C in his
> shack. I've always wanted one but they are bloody expensive these days.

Boat anchors are going for insane prices. N2EY recently told me about an unbuilt still-in-the-box Heath AT-1 which sold for $5,100 for God's sake. Ya can buy a complete pristine meatball S-Line including a 30L1 amp with $5,100 and have a *pile* of change left over. Or an Orion and most of a Centurion amp.

If/when I ever make it your place you'll have to let read some of 'em. These days there's no point to publications like DX bulletins, it's all out on the web in almost real time. But the websites are no where near as much fun to read.

I think there are plenty of folks that have worked DX on VHF
and will fit right in. Those that venture into HF that have only
repeater experience will, as you note, probably need some
helpful direction. I'm with you as to being ready and willing
to help anyone.

Cheers,
Bill K2UNK

Not the slightest comment about the original attempt at an insult which was based on ignorance of the facts, but, wow, when there happens to be a return barb pointing out that ignorance, THAT deserves the full righteous indignation treatment. Amusing hyprocisy, but nothing more.

> > > You can bet there are and if you've read many of Leonard H. Anderson's

> relevant.

Hardly, since I don't agree with a lot of what Mr Anderson said either. Disagreeing with someone is not the same as agreeing with his opponent, although I suspect that may be a difficult concept for some in this NG.

> You have a ".au" address...What's your VK call?

Is this for an "Hah! He isn't even an Amateur!" sort of thing? Since you have already deemed me a troll, I doubt that you would believe it if I told you.

Since I'm sure that you will look up the database to check if I'm lying, you can take the effort to find it in the first place. My initials are MR, not MJ. Of course, I could be lying about that as well. ;-)

Or have I misjudged you and you are just looking for a sked?

I'll trust your answer, because I don't think everyone who disagrees with what I think is just a troll. ;-)

Mark

Been vacationing in outer space?

Bill Halligan retired in 1966. Northrup bought out Hallicrafters in the early 1970s and transferred that to Wilcox a few years later. [Wilcox was a long-time maker of commercial-government radios] Wilcox got rid of it after a couple, sold it to an entrepreneur after their move to Texas. What was left was incorporated at "Hallicrafters International" but didn't go for a few more years until it went into receivership. It all ended in the early 1980s. Hallicrafters is only a memory now.

The Chicago-based original Hallicrafters produced its last model in 1972. Production on the military BC-610s ended about 1950 (primarily spares) with many remaining in service until the end of that decade.

>
> As for "elmering" those that would become Generals, I'm
> sure many of us are willing to help anyone that asks for help.
>
> Cheers,
> Bill K2UNK

It was partially a hypothetical question. Some Techs are inactive anyway so there's probably a signficant portion there. However if even just a third of them get on the air, that's still a big enough increase, even if spread over months, since some will be buying rigs, that it could be a problem for a while. If even 10% of the current Techs get on the HF bands within a relatively short period of time, it will be chaotic for a period of time.

But answer this. If they are not going to get on the air, what is the point of the free upgrade??? It is senseless to give people something they are not going to use.

Let's take a look at the points 1 to 3.

1. Most Techs that I personally know have an HF+2m rig at home as they are planning to upgrade anyway. Or they have it for all-mode VHF/UHF capability or satellite work. All these people will be in a position to go on the air instantly if free upgrades are instituted.

2. Among the active Techs, a very high percentage can be expected to buy an HF rig as soon as they could afford one.

3. If they are a family member of a higher class licensee and are actually interested in radio for its own sake, they will go on the air immediately.

While that could be a supposed "bright spot", I don't think that is a reason
for supporting codeless licenses and free upgrades.

Neat story. We were at the other end of the automotive spectrum. Dad
owned a '51 Pontiac and one day, one of the plugs unscrewed itself and
put a pretty good dent in the hood. Pop traded it for a decidedly
unglamorous '60 AMC wagon.

> Loewy was one of my idols when I was a kid. I had some talent along

Engineers are generally the guys who make things work. Designers are
those who make them nice to look at. We all know of the exceptions.

No, not at all. Hallicrafters (and many other firms) were still building
the same basic receivers in a variety of cabinets through the decades
with few innovations or variations.

> > W4JBP willed me his 1937 Hallicrafters Sky Challenger years back.
>
> . . . there's a gooder . . . get it yet?

Sure do. It sits next to the S-40A. The engraved German silver dial is
super looking.

So many of the ham radio dealers and parts houses have gone out of
business or have been bought by larger firms. West Virginia had
Chemcity Electronics back when I first got on the air. They had several
locations throughout the state and they sold amateur radio gear as well
as parts. This end of the state had a Cameradio shop.

Cincinnati had a number of places selling amateur gear. There was
Coston's. The "Saturday Night at Coston's" gathering of hams is the
stuff of legend. Queen City Electronics was run by John Dine WA8DFD.
R&L Electronics started in a garage in Hamilton, Ohio. In Dayton, there
was SREPCO. Cincinnati had a number of parts houses including Holub's,

Hughes-Peters, Mytronics, United Radio and the surplus house, Lapirow Brothers.

I've noted Globe King 500-C's going for $3,000+. I was amazed to get $775 for a 51J-4 the year before last. One of the big differences between the modern marvels and the vintage gear is that one can still obtain tubes and parts for the vintage rigs. I doubt that any of the current stuff will be operational or repairable in fifty years. The lack of a replacement switch, an LSI or an LCD display will doom them to the scrap heap.

> If/when I ever make it your place you'll have to let read some of 'em.

Once you start, there's no stopping. Allow me to whet your interest with the following from 1977:

"There were some local QRPers up the hill last week, the group including one of those serious types. His beady eyes were everywhere, questioning and checking. And the QRPers got to talking of Red Eye and the Palo Verdes bunch, and Slim and the Hero of Mafeking. So we had to tell them about the JA who in all seriousness had asked that alongside the obscure jokes we place an explanation of what we meant. Perhaps we should have kept the file sealed. 'Jokes?', says this serious one. 'Obscure jokes? Where are they? Why, I've been reading the bulletin for some years now and while there are things that sometimes I do not understand, I have not noticed any jokes.' Son of a Gun!! What does one do in a situation like that? The sky was blue, the day was warm and there had been a slow joy in the group as they talked. But we realized that like a lot of things, humor and DX and home cooking, that most things are relative and sometimes more so. So we told the beady-eyed one that we would underline them in his copy from now on, a service that perhaps others might want and use. And for $14.00 a year, the enigmas of DX will comeyour way in inscrutable prose, tangled, twisted and tortured...and

maybe stretched a bit. $18.00 will fling it at you by first-class mail
to the U.S./VE areas. $20.00 will fly it far down the moonpath to
Mexico and all the lands below the Tropic of Cancer and beyond the
meridians. Someday we may get the message...someday someone might get
the message to us."

> Never heard of that one either. I musta led a sheltered life.

Alton Brand, the fellow who published the yellow sheets put them out.
They offered a description of the equipment, original price and a photo
of same. The initial book showed gear produced from the end of WWII
though about 1973. Supplements for later years followed.

I don't support the ARRL's "gimme" for tens of thousands. Now Len can't
accuse us of not discussing amateur radio policy, his favorite topic for
some obscure reason.

Set the hook now. Steady!

Ziiiiiiiiing!

Okay, now let him run with it. Try and tire him out, then reel him in.

You can haul him down to the taxidermy shop in the morning and have him
mounted. Get a little brass plate reading "Pisces Maximus Anderson".

That's odd, Phil, because a licence issued in another CEPT country will be valid anywhere but the US, conditional only not being a resident of the country you are in, and on it being in the CEPT agreement, regardless of what your citizenship is. As in many things, the US viewpoint is in a minority of one. Strange that.

It's no problem, though. All I have to do is get my G licence re-issued, and unlike the US there is no 2-year time limit to worry about.

I agree. Beleive it or not, there are quite a few peope who don't want HF, although they are less numerous than they were. The re-vamped Novice sounds more like a Tech Plus Lite!

>the existing Technicians is to automatically upgrade all Technicians
>to General.
>
>I still disagree with the ARRL's proposal, though I can now see the
>reasoning behind it.

I think your analysis is very accurate, Jason, except for 3)

> I think the flawed assumption is #3.

Consider replacing your 3) with this one:

"3) The entry-level license class should be more balanced between HF and
VHF/UHF than the Tech is toady. The Tech gives all VHF-UHF, but no HF/MF, and
even if the code test is passed, all that you get is tiny slices of HF and two
modes. The ARS would be better off with an entry level license class that has a
better sampling of HF-VHF-UHF privileges, yet doesn't require a more stringent
written test"

>If the closing of the Novice class was such a major loss, then why was the
>No-Code Technician license so much more popular than the Novice
>license during the years when both entry-level licenses were
>available?

See above. It's not that the old Novice was a great loss - it's that the Tech
isn;t the best we can do for an entry-level license. At least, that's the ARRL
BoD thinking.

>The FCC closed the Novice license for the same reason
>General Motors closed Oldsmobile - not enough takers.
>

Exactly!

In reality, what is being proposed is more of a whole new entry level class than a reopening of the old Novice. They would do better to give it a different name - I suggest "Basic". Then you'd have Basic, General, Extra.

>I'd prefer to see all Novices and Technicians merged into a new
>Technician class and be granted Tech Plus privileges. This would be
>compatible with a 3-license system. Nobody would lose privileges, but
>all automatic upgrades would be modest.

Problem is, the license class would still be VHF/UHF heavy and HF light.
>
>As many have suggested, I think the ARRL proposal may have been a PR
>move. Although changing the rules is the FCC's job and not the
>ARRL's, anything that the ARRL could have proposed would have
>generated a firestorm of controversy.

Bingo!

But somebody has to propose things, and if ARRL proposed nothing they'd be criticized for that too.

>The ARRL had to propose the
>retention of the Morse Code exam requirement for the Amateur Extra
>license to appeal to the proponents of Morse Code testing.

Yep, a compromise.

>To appeal
>to the No Code Technicians feeling intimidated by the Morse Code exam
>requirement, the ARRL proposed upgrading them to General.

Not really. The ARRL proposal would drop the code test for General, so all that any Tech or Plus would have to do to get a General is to pass the 35 question General test.

The main reason for the free upgrade is to eliminate license classes that newcomers will not be able to get anymore. The BoD thinks that is a very high priority, even though there don't seem to be any problems with having almost 120,000 hams in closed-off license classes (Novice and Advanced) for the past 4 years.

There may also be hope that the free upgrades will spur activity among inactive or rarely active Techs and Tech Pluses. Whether this will happen is questionable, given the ease with which those hams can upgrade to General.

I can turn that around in a heart-beat. If they are not going to
get on the air on HF, why would YOU care? Bottom line,
none of us know how many will "get into" HF and how many
won't.

Overall, that sounds like a much better option.... on a couple of different levels. Not only would a discussion of religion, politics etc. be somewhat strong in feelings for the debaters, usually those also seem to take alot of time, and tieing up a repeater for that long is not necessary. There's tons of simplex frequencies to choose from.

Ryan KC8PMX

2733. ARRL Proposal----What should happen

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-16 02:59:08 UTC
From: "Ryan, KC8PMX" <NOSPAMkc8pmx@NOSPAMdiamondcs.net>

Source record: 87559

The proposal that the arrl should be working on is increasing the membership ranks instead of trying to change the system of licensure that has been discussed to death here. What, theres like around 25% of all hams that are members?? If the arrl is "sooooo good" then they should be working towards increasing the membership.

Not only would this actually help to lower the cost of membership by spreading the costs of doing business over a bigger spread, but also give more strength and credibility to the organization. With a good percentage of the members being in the 55+ range there seems to be a good need to come up with new people to add to the membership ranks.

How about this for a marketing idea?? If the arrl recieves 200,000 new subscriptions for 2004 then they rebate some of the cost of the subscription rate as it is now? (Thats 200,000 over the existing memberships)

Again, the license class/testing situation as it stands now is just fine and does not need any more changes for a while. Work on promotion and building from within before trying to recruit more.

Who is controlling anyones speech? Just because you have an opinion
doesn't mean you are obligated to spout it everywhere. It's called
discretion

>I will discuss any damned thing I chose to discuss with
> others on the air..... only difference is that I am intelligent enough to
> keep it on a even keel even if I still feel strong about the subject.

Perhaps you are, but not everyone is.

Here is my example that turned me off of Echolink:

I heard one ham talking to another one day at lunchtime. He was telling
the other ham how much he liked umm, certain body parts of other males.
After repeating that little bit of free speech a time or two, he went on
to describe in pretty sickening detail what he wanted to do to the
other ham. Fortunately the repeater owner shut the repeater off. But
there was at least a minute of that dreck before the person's free
speech was "violated".

In short, neither... (if your quotes are accurate)
A Control Op or Repeater owner can ban ANY user, even if he just dislikes you... it's his perogitive and is backed by FCC rulings in the past. He decides what subject/material is allowed on his machine.

The US is not a CEPT country - it recognizes the ham licenses issued
by CEPT countries the same way that it recognizes any other ham
license offered for reciprocal operation - the license has to be
from the country of citizenship. This is to avoid the "flag of
convenience" problem. We had a guy living in California who had a
Hong Kong license (isn't it nice to know the right people) who
operated in the US on a reciprocal basis with the exotic call sign
until the FCC ruled that one must be a citizen of the licensing
country or get a U S license - turned out that he was not a Hong
Kong citizen. He eventually got a US license.

>As in many things, the US viewpoint is in a minority of one. Strange that.

>It's no problem, though. All I have to do is get my G licence re-issued,
>and unlike the US there is no 2-year time limit to worry about.

I can't get my Israeli license reinstated unless I immigrate either
as an extended temporary or permanent resident or apply for
citizenship, even though I have a valid Israeli address that is my
family's home. At least I know that I can get my old call sign back
if I do. If I go there as a tourist or on a temporary visa
(business or short-term resident) I have to use the my US call on a
reciprocal basis (K2ASP/4X) even though I have a can-be-reactivated
Israeli call sign.

Not on someone's private repeater if they don't want you to. The
repeater owner isn't keeping you from discussing anything you want, but
he can keep you from using his repeater to do it and perfectly within
his right to do so.

Correct. However, the question is why they require US citizenship in the
other direction? The CEPT doesn't make them do this. I can get around it. I
just find it odd.

Yes. CEPT has a different solution to this problem, though. The agreement
only permits you to operate in a given country under CEPT if you are _not_
a resident. This would have prevented the particular example you mentioned,
as the guy was a US resident, and thus could never operate in the US under
CEPT, irregardless of citizenship. Of course, Hong Kong is not a CEPT
country, so you would have to substitute one that was to make this example
work.

That's a pity. In the UK it hinges only on having a UK address. If you can't get someone to act as a mailing address, then you can only get a 6 month temporary licence without a UK call, e.g. you have to operate as M0/foreign call, but if you can, then you can get a normal licence with a standard call.

Either way, a US General or above gets you the highest grade of licence, recently re-named Advanced. Unfortunately, anything less than a General gets you nothing, but a US citizen with a Tech licence or above should also be able to operate under CEPT with Advanced privileges, that citizenship limitation being imposed at the US end. My XYL is British and has a Tech licence, so right now she can't get a licence to operate in the UK atall.

In my case I should definitely be able to get one of my old G calls re-issued. Either one would now be an Advanced licence, although they were originally different classes. They are never re-issued to someone else, except with the licencee's permission or after their death, and even then only to an immediate family member or to a club. I held two UK calls at one time, and I could allow the 'spare' one to be issued to a family member if they qualified for a UK licence, i.e. for example if my XYL got her General.

In Pruneyard Shopping Center vs. Robins, Pruneyard Shopping Center was required to allow a group of high school students to circulate petitions on shopping center property. The decision was based on free speech rights in the state constitution, not on US Constitution. According to a discussion entitled "Why Can Shopping Malls Limit Free Speech?" at <http://slate.msn.com/id/2079885/>, only California, New Jersey, Colorado, Oregon, Massachusetts, Washington, and Pennsylvania have such constitutional provisions.

Someone could try to make a case for this rule applying to the use of an amateur radio repeater located in one of those seven states, especially if the repeater equipment had been purchased or subsidized by a government agency.

Note: I'm not a lawyer, so if you want to bring such a case, don't ask me for help. A repeater does not serve the same function in society as a shopping center, and there is no federal preemption controlling shopping centers as there is for the amateur radio service generally, so I suspect that the case would be dismissed quickly. But anyone can sue anyone over anything, and as I said, I'm not a lawyer.

Morse Code has WHAT to do with rural economics, Your Putziness?
Dee made no such analogy.

The points Dee made are the VERY SAME ones that sway countless
other economic decisions in rural areas, including phone/DSL
distribution, public utilities, and even the placement of hospitals,
police and fire fighting assets.

Unless YOU can prove diffrently?

> Please point to a trade-technical press with detailed technical
> information on any of the proposed BPL systems. Detailed

What assumptions have to be made, Your Scumminess? Distribution
and relay support for BPL signals WILL have to be made. Again...YOU
can prove differently? BPL can be distributed from ONE source WITHOUT
adequate relay facilities to ensure network patency?

Have at it, Mr Professional...YOU show us how BPL can be deployed
WITHOUT distribution and relay facilities...

We're waiting...

Unless you have a transverter to change the output from 462/467MHz to an amateur band, you need a GMRS license.

...And this is a problem why?

If only you have heard some of the things discussed out here in the Los Angeles area on 147.435, you wouldn't be asking such a relatively stupid question! :-)

Seriously, as long as it's not a forbidden topic (i.e. violates the rules), I don't see a problem. There was no violation by the discussion participants. I would only see that run afoul of the rules if they were actively managing some sort of political action on the issue....

As for the actions of the control operator (or trustee), since they have the right to permit or deny any conversation (or other use) that passes through their equipment (cf. 47 CFR 97.205(e) - "... limiting the use to only certain user stations ...."), I don't see a problem there either. Similarly, just because someone has a particular view doesn't mean that the local newspaper MUST publish it.

There's no constitutional violation here. There's no RIGHT to use a repeater.

Now, since there was no rules violation and if the repeater were coordinated as "open," at best there might be a complaint to the local coordinating authority as to their status of "open" when they kill the box for no violation nor have notified any of the parties that they are "disinvited" from use of the system. That's the only thing I see as "actionable" in any way. As for what that complaint would get you - probably a change in the coordination to "closed" or "private" (if there's even a distinction in your area).

On Sun, 15 Feb 2004, it was written:

Note that in Missouri, there have been cases "in shopping malls" where
[state] government agencies have offices, and that state has a law that allows
a petition zone in front of government property. The issue, as a criminal case,
was whether or not the person circulating the petition had a right to do so
because of the government agency's presence, or was it considered trespassing as
the mall was otherwise privately owned. I don't recall how this turned out as I
am not in Missouri and don't really care, but I believe that the first round
(the case is on appeal) went to the mall as private property, and the second
round (state appelate court) reversed. The federal courts are now looking at it
- as the ability to circulate a petition seems to fall under the "redress of
grievance" clause of the First Amendment (as a lawful procedure and alternative
to suing in the courts). I noted the cases (there are two, involving the same
petition circulator) because the accused has a variation of my surname (and is
thus probably a 10-20th cousin or such).

I agree that #3 is flawed. However, what the ARRL fails to realize is that since 1990 for the most part, the [no-code] technician license IS the entry level license even though it was not intended to be.

We HAVE a three license class structure now: Technician, General, and Extra. With regard to that, NOTHING need be done. Nothing new needs to be created. Nothing old needs to be eliminated.

If one wants to "restructure" and still have three classes, there is an alternative that the ARRL is too stuck-up to even suggest:

1) Class "A" - 30 MHz and up. (VHF, UHF, and microwave through light ....)
2) Class "B" - 30 Mhz and below. (HF, MF, to VLF or DC) Code not required.

One can hold BOTH an "A" and "B" license. Perhaps a power limit less than 1500w.

3) Class "C" - More than just a combination of "A" and "B" - intended to be held by those who want to do the "most advanced" aspects: Put up satellites or be volunteer examiners. Code (5WPM) probably required, at least for a while. Maximum power limit.

This way, those who want to do only HF don't have to worry about the VHF and above crap. Those who want to do only VHF/UHF don't have to worry about HF.

Conversion:
Novice -> B
Technician -> A
Technician w/HF -> A+B
General -> A+B
Advanced -> A+B (if this should grant "C" instead, I leave open)
Extra -> C

All those becomming "B" (including "A+B") would have credit for code towards any class "C" requirement for code. Class C would have code credit too (but that's not really needed in the upgrade schedule unless expired licenses give credit).

For the HF bands, there would be no need for any license class based subband restrictions; all would be equal. => Simplified HF bandplans.

> I'd prefer to see all Novices and Technicians merged into a new
> Technician class and be granted Tech Plus privileges. This would be
> compatible with a 3-license system. Nobody would lose privileges, but
> all automatic upgrades would be modest.

I disagree. That gives novices privileges in places they really weren't tested for.

> As many have suggested, I think the ARRL proposal may have been a PR
> move. Although changing the rules is the FCC's job and not the
> ARRL's, anything that the ARRL could have proposed would have

That gives technicians privileges in places they weren't tested for.

> who is listening out there, and it just
> isn't a good subject to have kids
> listening to.

With more and more kids being introduced to homosexually in early school grades today, it's not that poor of a subject for kids to overhear others talking about.

> Other subjects that fall under the same
> problem:
> religion, politics, anything that is likely to
> generate a strong emotional response
> and controversy. (snip)

The same with these subjects - all commonly found in schools. I would not like to think something children can discuss in school, even in earlier grades, would be described as a "problem" when discussed on the radio. The "problem" is those who can't discuss these issues without exhibiting strong emotional responses. These should be removed from radio, not the discussion.

> But! They have no case. The repeater control

Agreed again. The control operator has no obligation whatsoever to allow anyone to discuss anything using his private property.

>record Putzian faux pas.

Quite true, whether it be "Nancy" or "PJ" or whatever...living in the past seems to be a "qualification" for olde-tyme hammes of the morse persuasion.

There hasn't been a new BC-610 made for a half century or so, yet all IMAGINE they are still being made in Chicago and anyone can write a non-existant corporation for "information." Countless radio yachts are moored by such boat anchors and many olde-tymers love to scrape off the barnacles and tell many a tale of love and affection for those raddios that glow in the dark (much as the eyes of the olde-tymers glow in the dark when describing their wonderous adventures of expertise).

"Expertise" as equated by the mental and emotional stability of seven-year-old Extras that all must emulate to "be as good as them." :-)

Must be that all that radiotelegraphy rots the brain...

>although they are less numerous than they were.
>
Well, they don't have to *use* the HF privledges if they don't want to.
But when I got
my "extra lite" back on Restructuring Day, I found HF to be fun to
operate. I used to
have an old fashioned tech plus from 1976 (5wpm, general written). It's
not like having
HF priviledges costs any more for the license...

If the FCC ever should consider creating a "Super-Extra" license, they
should allocate
new ham spectrum for them, leaving the existing extras access to all of
the old ham
spectrum. That's what they should have done back in the 60's when they
did incentive
licensing. And it doesn't have to be new HF spectrum, maybe new
microwave freqs,
LF or whatever. But as I understand it, HF isn't so much in demand as
VHF, UHF and
microwave is for commercial users today vs 40 years ago. So new HF is
more likely...
Though odds are very long even on that.

There actually was a time when you could not have a novice *and* a tech
license
at the same time. Tech required 5wpm then, and general written. And
presumidly
novice written. So Tech would have been a superset of novice, but if
you upgraded
from novice to tech then, you gave up your old HF privs to get on above
50MHz.
This was more likely a brearucratic screw up than actual desired policy.
Like today's
lifetime credit for passing a 5 wpm test but none for 13 or 20.

Take it simplex. An analogy is that "freedom of the press" doesn't mean
that, if I own a
printing press plant, that you can make me print up copies of your
message. It means that
you can go out and build your own printing press plant and print
whatever you want to
say. So get your own repeater. No allocations left? Buy out an
existing repeater system.

And did it with just one 10 word sentence.

Fun facts:

- The BC-610/HT-4 family only went up to 18 MHz.
- Versions were made from 1939 to 1955, ending with the BC-610I.
- The companion BC-939 tuner was designed and made by Upper Darby's own B&W, which is still in business.
- Complete manual available free-for-the-download from the KG7BZ website

State rules don't apply to federally licensed amateur stations.
And...the state constitution treats shopping centers as essentially
a public place. The same thing happened in NJ. BUT, that doesn't
make ALL private property such as my home, my backyard,
my repeater subject to the state saying I must allow anyone to
say whatever they want "on" my property.

> Someone could try to make a case for this rule applying to the use of an
> amateur radio repeater located in one of those seven states, especially
> if the repeater equipment had been purchased or subsidized by a
> government agency.

It isn't a state matter just because it is in a state. The state
can't excersize control over aircraft just because they come
and go in an airport in that state.

> Note: I'm not a lawyer, so if you want to bring such a case, don't ask

This is true. When I had my novice, in 1962, it was a 1 year non-renewable license. I failed the 13 wpm test twice and it wasn't until 1964 that I obtained my general. I didn't want the tech as I figured I'd be stuck at 5 along with the tech license for eternity. In 1966 I obtained my extra (along with commercial telegraph license).

The lifetime credit for a 5 word per minute test makes some sense as anyone who could never copy more than perhaps 10 words per minute would, over the years, likely forget it. I was last active on cw in 1969 and let my licenses expire. I never practiced nor studied until I showed up for a test in 1993. Yes, I could still pass 20 words per minute (and just checked off some answers in the theory exam as I didn't want to waste time extracting square roots by hand as I didn't bring a calculator - you don't need 100% to pass). Anyone who passed 13 wpm or greater doesn't need a free pass; they can simply take the 5 word per minute exam and pass. You can bet the folks that need that free pass would be hard pressed to actually take the test and pass - or they wouldn't be so preoccupied with finding proof that they had a license once upon a time.

> a typical example.

It's true that there have only been a few hams younger than about 10
years of age. And in most cases these young hams were in somewhat
exceptional circumstances.

Add a few years, however, and the numbers explode. Tens of thousands,
if not hundreds of thousands of present-day hams started as preteens
or young teenagers, often with no other hams in the family and no real
parental support other than "don't electrocute yourself or burn the
house down". So we still have the nagging question of why it's
unreasonable to expect others to do what they did for the same
privileges?

> The more typical, and meaningful, example of an
> entry-level ham would be one who was high school or college-age.

Why?

I got my first ham license at the beginning of 7th grade. What is now
middle school. No other hams in my family or neighborhood. There were
many like me,
limited mostly by lack of money and transportation.

> The
> greater numbers of these typical entry-level hams would mean that they
> would have a more profound impact on the shaping of the future of
> amateur radio, anyway.

Agreed! But note this: When the ARRL paid READEX to do a survey back
in 1996, the most strongly procodetest age group was the *youngest*
group - 15 and under. 85% were in support of code testing, only 15%
opposed. Time after time, when Morse code is demonstrated to young
prospective hams, they *like* it and are eager to learn it. The idea
that a 5 wpm code test is somehow a barrier to young people is not
borne out by actual experience.

I am simply asking why it is so urgent to get rid of closed-off
license classes. Where is the "loading" in such a question?

> Furthermore, you see simplicity where I see complication, and vice-versa.

I don't see what the problem is with simply keeping the Advanced and
Tech. Allow those who hold them to upgrade in their own time.

All I see is the answer that "we need to simplify!" but not *why* that
simplification is so needed right now, when it wasn't needed 4 years
ago.

The word "refarmed" was used, which is a euphemism for "reallocated".

If all Advanceds get Extras, but Generals get no more bandspace, then
what is actually "refarmed"?
>
> >>I would combine Advanced and Extra phone bands

The point is that by using the word "refarming", you implied that
Generals would get more bandspace.
>
> I suppose a definition of refarming is necessary for this context. Even

>
I say it would be clearer to avoid such euphemistic words and be more
direct. "Reallocate" or, better yet, "widen the phone bands". Because
that's what it comes down to.

> >>That doesn't mean that I wouldn't support frequency shifting, such as

> and fatalistic acceptance of, the possibility that Element 1 will be
> deleted.

That's one way to look at it.

The fact is that there are more issues to be addressed than just the 5
wpm code test. It's important to not lose sight of the fact that
whether the code test stays or goes, those other issues should not be
forgotten.

> Perhaps you want to "go down fighting" on this issue with the
> ARRL and the FCC.

Why not? If those of us who support code testing don't ask, we'll
never get.

Is the current 5 wpm test, with all its accomodations, *really* too
much to
ask of new hams? The ARRL proposal writeups wax nostalgic about the
old Novice license, but carefully avoid mentioning that
part-and-parcel of the old Novice was the 5 wpm code test.

> Your ideal-world position of no changes allows me to
> rebut with the continued complications that it implies.

My ideal-world position isn't one of no changes. I've outlined it here
before, and can dig it up again if you want to see it.

> On the other
> hand, I too believe that Element 1 being dropped is likely, but I also

For all license classes or just Tech Plus?

> giving present Advanced-class licensees a "free upgrade" to Extra, and
> keeping General and Extra-class phone bands substantially and

> radio allocation).

So the Tech would remain the entry level license?
>

> and your callsign doesn't appear in Google Groups until 1997. Would you
> mind elaborating on what you thought would happen, and what you think
> has come to pass?

OK, here's the short list:

First off, dropping the code test from the Tech in 1991 re-created a
ham license that was VHF-UHF centric. New hams were funneled to start
off on VHF/UHF FM phone with new manufactured equipment, rather than
HF CW, where homebrew, kit and used equipment were more prevalent.
This created a divide between those hams who had some or all HF and
those who had none, centered around the code test. Such divisions are
not a good thing. The resulting division has diverted attention from
other, more important issues such as publicity, antenna restrictions,
and limits to growth.

Second, the change brought about a surge in new hams (good) but not
sustained growth (bad).

Third, one of the things promised back in 1991 was that there would be
more and more "technical people" becoming hams if the code test were
dropped for VHF/UHF. Did not happen.

Most of all, the continual tinkering with the license system has
perpetuated and expanded the myth that the license tests are "too

hard", and that all will be well if we just make this change or that change. Yet history tells a very different story. Look at the growth in US ham radio from 1991 to the present, and compare it to an identical length of time before 1991. Was there a big, sustained increase in the number of new hams because of the Tech losing its code test?

Look at the growth since April 2000. Mostly existing hams getting upgrades, but not a huge jump in the number of new hams.

And the issue isn't just code tests. The *written* tests have been reduced in number, size and complexity, too. Is that really a good thing?

> >>If the former, then

> violator for every three Tech/Tech-Plus violators, or every 1.5
> General-class violators. I stand by my original argument.
> Specifically, that the FCC's enforcement agenda is mostly aimed at
> high-yield (easier to catch/more serious punishment, aka "big fish")
> violations "such as" (i.e., not limited to) power and interference
> violations at higher classes of license. Such licensees are being
> subject to proportionately more enforcement scrutiny than other classes
> of license.

What about the new ham who was found transmitting false distress calls on a marine VHF frequency using a modified ham rig? As I recall, intentional false distress is one of the most serious infractions possible.

There is also the factor of enforcement being complaint-driven. Someone who acts up on a 2 meter repeater can be heard over a radius of perhaps a few dozen miles, and the repeater control ops can shut down the machine. But on HF, a single bad apple can be heard for hundreds or thousands of miles, and there's no way to "shut down the machine".

Please note, too, that the enforcement actions for on-air behavior are almost entirely directed against those using voice modes. Enforcement actions against hams using Morse code in the CW/data parts of the bands are almost nonexistent. The disparity is far more than can be explained by the relative popularity of the modes.

Out of time again. More to come in Part Three

Here is a post to misc.transport.trucking the resident weirdo Chuck Adkins made...When you look at all of these posts you will see what a lying hypocritical mentally deranged idiot he is.
Also, don't neglect a visit to his personal website, loaded with cool info about Chukkee...here's the link!

http://www.geocities.com/wimpasschukkee/gayboy_ChukkeeSukkee.html

And here is the first post...read with interest...hehhehehehehehe

Hi guys,

I am looking for some work, badly.... I've got bills up the butt and I need some work...

here's my story...

I have a CLASS A CDL with Hazmat and Doubles.

I graduated from W.C.C.C.D. in Belleville, Michigan in March of 2003

I thought I'd be smart and get a local job.

Well, needless to say, I had a accident. No one was hurt. but I did get a ticket. Only damage was to a city street light. turning out of parking lots onto narrow streets with tandems not all the way up, can downright stink! :-) Drive way was a WHOLE lot narrower than I thought... Oooops!

Anyhow, I'm studying to be a Ordained Minister. (or Pastor, if you prefer...I'm a Pentecostal... if you like Titles like that... I prefer just a member of the Body of Christ, Myself...) and I really cannot go OTR... I am wondering, are the ANY small companies or maybe bigger companies that read this newsgroup and would be willing to work with someone with 1 accident and 4 points on my license?? (2 were from accident, other 2 were from a speeding ticket in my personal car...) Anyhow, I have NO DUI's, and never been a in jail... I am a very dependable person, I'm looking for a local dirt or gravel or something along those lines, kind of a job, if you wanted to put me in a tri-axle pup truck, I wouldn't hold it against you... :-) I just need some work...

If you can help...

Drop me a line at k8cpa@NOSPAMcomcast.net <--- remove NOSPAM from address for it go though...

Thanks a Bunch and God Bless you..

Pastor Chuck Adkins

PASTOR??? Right...NOW...look at this post he made on Feb 16, 2004 on a
Yahoo newsgroup...

2 words you two jerk offs...

GET SCREWED JACKASS!

and I remember when I worked you Dave on PSK31 and you were nothing
but nice to me. NOW you Talk your crap... Nothing but a flippin'
useless P.O.S.

Now stick that in your crack pipe and smoke it, Bitch Boy!

You know who...

Bunch of cum burpin' Bastards!

and as far as you go TROLL FREE, I've forgotten more about radio, than
you'll ever know, and you'd better watch what you say, or I'll have
SPEED BUGGY come clean your clock, like he did last time! and yes, I

do know about that.

Don't you flippin dorks know I could make a telephone call and drop
the dime on you cheeseheads and you'd all be outta business?

Watch what you say, because, I know people. and I could make ALL of
your life's, very misarable.

have a nice day...

-Chuck K8CPA

NOW, look at the threats he has made to others....

Agreed.

I am now using my filters on agent... no more anti-keytrolls.... I'm
gonna be at findley hamfest, with a friend... I hope one those pussies
comes up to me at that Hamfest. LIKE THEY SAID THEY WERE GOING TO AT
TOLEDO! FUCKING PUSSIES! NEVER EVEN SHOWED UP... ATTENTION KEYCLOWNS,

I WILL HAVE A TABLE AT FINDLEY HAMFEST. AND I PERSONALLY CHALLENGE YOU
TO COME TO MY TABLE AND MAKE YOUR PRESENCE KNOWN!!! AND SEE WHAT
HAPPENS! WHEN I'M DONE STOMPING YOUR ASSES... I MIGHT LET YOU LEAVE!
MUAHAHAHAHAHAHAHAHAHAHAHA!

SHOWDOWN BETWEEN THE ANTI-KEYCLOWNS AND K8CPA WILL TAKE PLACE AT THIS
HAMFEST...

BE THERE OR BE SQUARE!

This is where the talking stops and the B.S. walks... and the action
starts....

I gotta run, time to polish the 9MM...

this ain't no joke... this is the real deal....

time to roll...

BELOW ARE SOME EARLIER THREATS MADE BY THIS INDIVIDUAL

Hi Modsquad and All,

I remember a few years back here in The Motor City here, there was a dude, the *supposedly* bought a "box" from a local dude here that was building them, he would go around and start running said guy in the ground, giving out his real name, address, ect.... trying to say he sold him a bad unit ect.... anyways, one fine day, he got tired of it, the guy got a friendly visit from the local chapter of the IRON COFFINS at his house, beat him and his 21 year old punk ass kid to bloody pulp, had thier way with his woman, and as they were leaving, they said, "this is for running your mouth!"

My point?

Sometimes it's best not to be the loose cannon, cause you never know who knows who, and who's friends with whom....

73

Welp.... Guys, I normally DON'T acknowledge this type of nonsense, but
what the heck, seeing I'm flavor of the week to these dumb idiotic,
ignorant people... what the heck.

"K8CPA Is Retarded" <chuckeezasukker@yahoo.com> wrote in message
news:ff41621.0203090648.1a4edb06@posting.google.com...
> Yeah, Chuckee...you won't be there. That's because all you can do is
> threaten violence and rape to women and children from behind a
> keyboard.

Number one. Did *ANYONE* in here, see ANYTHING posted by me,
threatening
to rape dougie's daughter or wife? With Chuck K8CPA in the headers????
I
saw something a LONG time ago, posted by some troll to you in this NG,
something also to do with Riley Hollingsworth as well, I thought it
was
quite funny. Figured some troll was having a bit of fun, I also
noticed
the troll was on AT&T Worldnet, as I was at the time too... and I
kinda
thought in the back of my mind, Whoa boy, I'm gonna be blamed for it,
and sure enough I was. but, I kept to myself about it. you say, you
traced the IP address to me, Bullshit! Dial-up Modems are assigned
static IP addresses, and it came from a dial up connection in the
Detroit area, Big FUCKING deal! you know how many HAM'S and or CB'ers
in
Detroit and surrounding area there area? Thousands! Someone was having
the time of thier lives at YOUR expense dougie, and you friggin fell
for
it, hook line and fucking sinker! ....and of course, *I* was
blamed
for the whole thing. like I figured I would be. In fact, I *Think* I
may
know who it was.... not 100% for sure, but do YOU honestly think I am

going to tell your dumb ass who I *think* it might be, HELL NO! for
one,
becuase I quite honestly could be wrong and for two, I personally
think
your an moronic, pencel-necked , no-code, CB dumb ass, wanna be Ham!
and
I'm glad the guy PISSED YOU OFF!

>When a man calls your chump self on it you have to run.

Shit boy, from what I hear, I could kick your fucking ass with ONE
hand
tied behind my back! and remember, I have friends too and what I
cannot
handle, they could and would be more than happy too help out... ever
heard of the Iron Coffins Dougie????????? They make the fucking Hell's
angels look like fucking boy scouts!

>You
> are a fat cowardly piece of human garbage, and you can't do diddley
> squat to anyone. >

Neither Can you.

>In an earlier post you said your fatboy loser
> criminal self would be there. You also said you fear "no one".
> I think you lie. You are shaking in your pink tennis shoes over the
> very prospect of coming face to face with someone you made a physical
> threat to.

hahahahahahahahahahaha.....TOO FUNNY!

You are so DUMB!

You forget, Dougie, I know where 504 Euclid Ave is in Toledo. I might
just come right to your fucking house tonight bitch and drag you out
in
the fucking street and kick your ass... wanna try me???

Go for it!

> Publicly apologize on the NG and it is all forgiven.
>

Like I said, Dougie, you ain't smart enough or bad enough to get
ANYTHING out of this mother fucker...

> Also, for those who read the post a while back where Chuckee said he
> had a concealed weapon permit: The fat chump lied. The Michigan State
> Police provided this information for free. He does not and never did
> have one.
>

who said it was registered. and besides, I don't need a fucking gun,
asswipe, I'll kick your sorry ass WITH MY FUCKING BARE HANDS!

> So, there you are, keyclowns. One of your own. Proven to be a fat
> chump coward and a liar. A disgrace to amateur radio, a typical
> keyclown, a putrid hunk of turd with arms and legs. A coward. A
> threatener of women and children.
>

and you? a sorry assed mother fucker, who got the fucking BALLS to
post
with REAL Name and e-mail address!

> COMING UP NEXT:
> K8CPA's criminal record!!
> I mailed away to the state capital for that. Soon enough I will have
> it and will post it on a website.
>
>

This will be quite boring as I'm clean as a whistle, except for a
traffic ticket that I got like 4 years ago and it's off MY record.

73's to you Dougie!

Oh, so, now you go from wanting to hurt me to wanting to be a teacher,
sounds like a change in tone to me.

> 2. I suggest you contact the cable company and complain. That's all
you can do,
> except make threats of violence to women, children and pets.
>

Well, the fact is, *I* have *YOUR* IP address and I traced it to your
location in Toledo, and I E-mailed the system admin at *YOUR* ISP with
all the threats of personal harm to myself via e-mail, which BTW could
have you brought up on Federal Charges. So,we'll see who has the last
laugh here and BTW, if the Toledo branch of the FBI does call me and
ask
if I want to press charges, I will be saying yes.

> 3. Do you see any threats? You amuse me Chuckee...whining like this.
>

Well, FATBOY, that shows how STUPID you are, When someone enters a password
into a website, it usually echo's back dots... (you know... like ****) and I
don't have that great of a memory...

And futher more... I would NO interest in HACKING your LAME ASS web site,
anyhow, Remember YOU posted an AD for in this NEWSGROUP, and ANYONE that reads
this Newsgroup could have seen the ad, and went there and hacked it, Just
because I came to your HOLE IN THE WALL shop and set you up with a newsgroup
reader that makes ME a suspect?? You need HELP, MORON! And besides that, You
get out in this newsgroup acting like your the shit, Motherfucker, Let ME be
the first to tell you, YOU AIN'T SHIT!!!! And if you think COONDOG was a
problem wait'll you tangle with me, ASSHOLE, I'm a card carrying MEMBER of the
Latin COUNTS, I'm friends with the CASH FLOW POSSE, and I also have friends in
the IRON COFFINS, So, now do you really wanna fuck with me??? Think about it.

And Besides that, Scotty's Tech Does ALL your fucking WORK ANYHOW!

Chceck this out, this Idiot got ahold of one of these NEW TEXAS STAR Amps, and
the fucking moron tried to convert it! HE BLEW IT UP!! and SCOTTYS Tech HAD TO
FIX IT! BLAHAHAHAHAHAHAHAHA!

And this guy tries to tell everyone he cn fix radios????

Yeah, Right!

Have a nice day, LOSER!

I hate to say it, but I'll probably put up a 10 meter beacon. Of course, FCC rules state using the minimum amount of power necessary for communications. This means searching out folks on the internet that are perhaps 40 miles away and you'd need some 'reasonable' power on 10 meters. Best to use a horizontal dipole. A vertical will reduce BPL interference in both directions and a yagi would reduce your horizontal signal spread (as well as aid communications). 100 watts or so ... I wonder what would be most effective? AM/SSB/FM? Again, you simply increase power on the mode selected to obtain decent communications. You also happen to choose a mode that would tend to disrupt BPL. Of course, if the power companies do happen to filter to protect amateur bands, they also will protect themselves from signal ingress. Obviously, they are smart enough to stay away from the commercial FM band, but I'd bet there will be problems in fringe areas for channel 2 and 3 television. It will be interesting to see how it plays out.

So...what? Is there some point here? The USA will do so as well, all
in good time. The incline of the slippery slope of our country's descent
into intellectual and ultimately economic poverty is increasing, and we're
picking up speed on our drop into the abyss. Hong Kong, Denmark, and
all the rest of the dumbed-down "No-Code" countries just got there before
us, that's all.

>
>Did they violate part 97 of FCC regulations OR Did the control operator
>violate their 1ST amendment rights

Bob:

Based entirely on the information you have provided, it does not seem to
me that any violation of Part 97 had occurred. The discussion was not
patently offensive in and of itself. However, it could have been depending
on how much detail you've left out. Had there been any discussion of
specific sexual acts, then there would, of course, have been adequate
cause for the control operator to put a stop to it. Even so, he/she may
have simply been acting based on personal or organizational (repeater
association) standards, which he/she would have been entirely within
their right to do.

OTOH, even if the discussion were not patently offensive, there was no
violation of the repeater users' First Amendment rights per se. A repeater
system is not a democracy; it is controlled by individuals who have a

responsibility to ensure that it is not abused, and such judgment is left entirely up to the guy holding the switch. I am a repeater control operator, and have been for almost the entirety of my career as a radio amateur. The only time I've ever had to intervene based on things being said was when a bunch of elementary-school kids, who were the children of other hams, had all just passed their No-Code Technician class en masse, and were proceeding to take liberties with the "third party" rule allowing their unlicensed friends use their HT's and starting to use language which was totally unacceptable. They found themselves talking into dead air right quick (I didn't shut down the repeater, I just turned the PL on), and their parents got phone calls from the local OO that very evening.

In the situation you described above, I doubt that I would have shut down the machine, unless I knew for a fact that there were some members of the homosexual community listening who would have been offended by the discussion. However, even so, I still may not have shut it down, since the Constitution does not protect us from being offended, especially when listening to a device with an "OFF" switch or the ability to change frequencies. Such protections come about as the result of the establishment of local standards, as opposed to the imposition of specific, universally applied restrictions.

I strongly doubt that this case will ever see a court of law, unless those who wish to pursue a lawsuit are very sure that a 1st Amendment violation had actually occurred (which I doubt) and they have the financial resources to both acquire legal counsel and pay for the consequences of losing the case. The best they could do is get the repeater's Trustee a NOA from the FCC as a result; there would be no money anywhere for a big settlement or damage award, unless the repeater was owned by some large corporation which had it's own amateur radio club. In that case, I'm sure the corporation would have protected itself by making the club a separate, non-profit corporation, as many radio clubs do to protect their members from liability issues.

BTW, the only reason why I even suggest that this case could result in a lawsuit is because I don't know exactly what was said, only the information given. Based entirely on that, there is definitely no violation of Part 97 and no 1st Amendment issue whatsoever. I doubt that even the Amalgamated Crazy Lunatics Union would stay on the phone for more than two minutes with someone making this complaint.

That is obvious if you are relying on _Pruneyard_. The U S
Circuit Court of Appeals for the Ninth Circuit (which covers
California as well as 7 other Western states) held in _Howard
v City of Burlingame_ that there are NO First Amendment rights
granted by the amateur license. No, none, nada.

Much as I don't like the rest of that decision, it is clear.

>so if you want to bring such a case, don't ask me for help.

I am an attorney who handles amateur radio cases, and I wouldn't
take such a case because I do not want to appear a fool in the eyes
of my peers or future clients.

Now back to The Morse Wars.....

So what? I thought the idea of the Tech Plus license is to offer a
taste of HF but still leave a strong incentive to upgrade. Perhaps
the Tech Plus HF privileges should be expanded. Upgrades to Tech Plus
and an expansion of the Tech Plus privileges would be a much more
reasonable alternative to upgrades to General.

I'm not against free upgrades - I just think free upgrades should be
modest and reasonable. For example, upgrading Advanced licensees to
Amateur Extra is reasonable considering that most of the new Amateur
Extra exam questions were old Advanced exam questions.

As I said before, I think the ARRL proposal goes too far in upgrading
Technicians and not far enough in ending the Morse Code testing
requirement. Then again, the directors might have made the proposal
as a PR move and don't seriously expect the FCC to adopt much of it.

Why do the ARRL and FCC consider this a high priority? Anyone? Is it
that much work to maintain these closed-off classes?

As I see it, there are trade-offs. In my opinion, having a 3-class
system that includes a Novice license just isn't a good idea since
that means eliminating the Technician license, and that means
upgrading the Technicians to Generals in order to avoid downgrading
anyone's privileges. Either the Technician class should be kept (and
the Novice class eliminated and upgraded to Tech Plus), or there
should be a 4-class system.

No. Amateur Extras of the morse persuasion do. They are supermen,
able to leap tall pileups at a single knob twirl, are faster than an
electronic QSL, have X-ray vision to see the "real agendas" of the FCC
and conspiracies against morse code behind every burning bush.

They have superhearing, giving all cue-soes "599" signal reports.
They have supertaste, always picking the best in ham gear, trying
to make all envious of their superwallets..

They also need supervision. Parental supervision. Some are
emotionally seven years old! :-)

I don't remember that in southern California where I started buying from
local Sears stores beginning 1957...while working for Hughes Aircraft
El Segundo Division...or from 1963 when I got a Sears catalog plus
supplements to check out several ways to improve this house that I'd
just moved into.

Must be a different "Sears." :-)

Glad that Jimmie is all enthused. He travels back in time often and
I think he really lives back then. It's good that he has some "radio
stores" to hang out in... :-)

The Class C and D CB didn't get started until 1958 but Henry Radio
had a bunch of different CBs for sale in 1959. Was there, bought
an E.F. Johnson transceiver. Still have it on the shelf.

Why did you ask? :-)

Hmmm...1952...just beginning ham ops...that was when you left your hormone-infused prom date bereft of smooches on her front porch in order to rush home and operate with your new license?

That was even better than the Tales of the South Pacific when you were shooting bears for naval intelligence!

Love those old radio tales! :-)

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of February 15, 2004:

Novice - 32,541 (decrease of 16,788)
Technician - 260,212 (increase of 54,818)
Technician Plus - 61,993 (decrease of 66,867)
General - 141,124 (increase of 28,447)
Advanced - 81,565 (decrease of 18,217)
Extra - 104,978 (increase of 26,228)
Total - 682,413 (increase of 7,621)

Well, the same can be said for free upgrades of Advanceds, too.

But consider this:

Back in 1970 when I took the Extra, 30, 17 and 12 meters weren't ham bands.
Neither was 903 MHz. 160 was all chopped up with LORAN. Etc.

Yet when those new bands came along, I didn't have to take a new test to use
'em.

Jim.

Thought you said there were 34,000 Novices the other day?

Also, take a look at the upcoming expirations in the next
6 months...some pretty hefty numbers of hams with
expirations coming up. I expect at least a 10K overall
reduction of licensed hams by end of 2004 based on
SK, lack of interest, etc. based on past renewal rates.

Cheers,
Bill K2UNK

I don't think that the F.C.C. cares one way or the other, but I'm
pretty convinced that the ARRL wants more HF qualified Hams as a bolster
against spectrum threat (not a bad thing) and they want more members, as
there is a divide between members and non-members privilege wise.

They dismiss at least the second agenda on their website, but that is
the way things go these days. Pick all your reasons for doing something
and dismiss them right up front. Get it out of the way quickly, so to speak.

Agreed! I don't know if you saw my proposal in the group, but it really just allows things to stay very close to what they are right now, the changes are the deletion of the Morse code test, and tailoring the testing regimen to the license class. That is to say Technicians would receive some pretty comprehensive RF and HV safety testing, and General's would have an HF focus, while Amateur Extra would go more into the theory and electronic testing. The license classes that are orphans would retain their privileges such as they are now.

Simple, and we know it would work. It doesn't anger anyone that doesn't have anger issues already, and no one loses or gains.

BTW, even though my proposal does not include a Element 1 test, I am a PCTA. How do I reconcile this?

Even though I want, and will argue for the retention of the Morse code test for HF access, I believe that it is very likely to go away. I don't like it, but it is probably going to happen. So instead of pinning all my hopes on something that isn't likely, I believe there should be a position we can fall back on.

They were magnificent beasts, no question about that and they're probably the most memorable of the PRR power roster. Unfortuantely they "didn't get around" all that much because of the limited amount of PRR electrified mileage.

I was raised and still live in the heart of GG-1 country, I got GG-1 stories . . ! The best visual I ever had of one was when I was a young kid. We have a neighborhood electrified PRR commuter and freight branch line on which, back then, they normally ran those early 1900s junker MU car commuter rattletraps. But every time TWU 234 struck and the city transit company shut down the commuter mobs had to switch from the stranded suburban trolleys to the PRR to get to their downtown jobs. That's when the Pennsy rolled up it's sleeves and put real trains on the West Chester line. Watching an inbound GG-1 pulling a long string of 80 foot smoothside coaches glide into Clifton-Aldan station was like a religious experience . .

Much later in life I did a good bit of business with the electric car shops in Wilmington DE which is where the Pennsy based it's GG-1 fleet and where Amtrak still headquarters it's electrics. More GG-1 tales: I don't know where it is now but during that timeframe the shops completely tore down an reassembled a museum-quality GG-1. Ya could use the paint as a mirror . . I saw the GG-1 they cut in half and converted into a brush-burner, the GG-1/2. And the GG-1 they turned into a monster snow blower.

http://www.spikesys.com/GG1/

http://www.rrmuseumpa.org/about/roster/gg1.htm

One of 'em might run again somewhere some day. It's been my ongoing understanding that the overhead power system had been switched from 25 Hz 11Kv to 60Hz but that's apparently not the case, the changeover never happened so operating a GG-1 should still be possible. *IF* they can replace the original PCB-laced transformer oil to an oil which is not as toxic.

Also the sequel, "Olly Hopnoodle's Haven Of Bliss". James B. Sikking
(best know for Hill Street Blues) plays Dad and Shep makes a cameo
appearance.

As K2ASP sez, the GG-1 is the top of that pyramid.

For streamlined steam engines, the special J-3 Hudsons used on the New
York Central's Twentieth Century Limited are the most impressive.

> > Raymond Loewy, Dad and me . . .

The insides of the S-40 were only slightly changed to make the
S-85/SX-99 and finally the SX-122.

The Loewy cabinet, with variations, showed up in the S-40, SX-42,
SX-43 and S-76. There may be others, too.

> > most of a Centurion amp.

Yup. There was also an SX-88 at $7,151 that beat the previous one at
$6000.

And a recent auction sold an *unbuilt* Heath SB-303 for about $1300.
Adjusted for inflation, that's about what they cost new. But the '303
isn't much of a receiver - not even up to the level of the earlier
SB-301, and defintitely not in the same class as the Drake R4 family
or any Collins, A or S.
>
> I've noted Globe King 500-C's going for $3,000+.

I saw an ad for someone *making* new Globe Kings...

And information, most of all.

A few years back I sold a Kenyon T-656 plate transformer to a ham in
Ohio. But it turned out he was just helping out a friend in one of the
Scandinavian countries who was restoring a rare old prewar Harvey
Wells rig. My old transformer is now running the old Harvey Wells, and
I got a nice thankyou on the website. (search on "Kenyon T-656")..

> I doubt that any of the
> current stuff will be operational or repairable in fifty years. The

> the scrap heap.

50? Try 20! Some older transceiver models are falling prey to the fact
that certain custom components are failing and there are no
replacements except
from junkers. If you can find a junker that has the part still good,
that is.

Do you need a SAG website address?

Do they have a subliminal morse message in the recording?

Do they QSL?

Strange...most of us think this newsgroup is about amateur radio
policy matters, not SAG or AFTRA personalities, olde trolleys and
choo-choos, architects, family lineages, and autos hidden in barns.

Apparently it has expanded to cover anything the olde-tyme hammes
(and extra super special morsemen) want.

Chat room. Ho hum.

Wet noodle IN a tuna tin, Brian. Using on-off keyed [expletive deleted]
above all. The latter is important!

Real Hams use on-off keyed trolley cars, working DX with spark from
25 cycle overhead lines.

The E.F.Johnson Viking Messenger CB? 12 VDC and 115 VAC, take
your pick. :-)

It wouldn't work after one catapult shot and on front porches only with a long set of jumper cables. It did use a vibrator, though I don't think it would be suitable for [expletive deleted]. I guess it was moisture and fungus proof enough to use in the south Pacific. Have no idea if naval intelligence used them.

All of this is in line with the NON-policy discussions in here involving choo-choos and trolleys, 25 Hz AC, architects, family lineages, SAG and AFTRA personalities, and vette-eating muscle cars now languishing in barns. [one has to act like a native morseman in here nowadays...]

I'll have to look in on the ARRL website to see if they have some important amateur radio information regarding old choo-choos and trolleys, family lineages, architects, and muscle cars. Important policy stuff that they might use for justifying the morse test forever.

Wonder if "Electric Radio" fanzine will turn into "Eclectic Radio?" Any day now in this chat room. :-)

LHA / WMD

2793. Re: K8CPA-Chuck Adkins, False Christian, threatener of women, obscene retarded PIG, queerboy!

To Whom it may concern... The person posting this, Douglas Adair, of
Toledo, Ohio. has been doing this to me for over 2 years. All of this
is being forwarded to my lawyer, Levon King, who is also the Mayor of
Allen Park, Michigan. Levon is going to contact the local Mayor of
Toledo, ohio and see if a complaint can be filed against Mr. adair for
his actions. Mr. Adair, I would seriously advise you, if you don't
want to end up in a court of law for harrashment charges, and a
lawsuit for slander, I would advise you to cease and desist.
otherwise, I will get a court order against you.

I do have a lawyer. and I will use him, if need be.

-Chuck K8CPA

P.S. You're picking the wrong fight.

I AM CRISCO KATHY,TAX SEASON IS ALMOST UPON US. I CAN GET YOU THE BEST RETURN. IT MIGHT BE A LITTLE BIT ILLEGAL.BUT WHAT THE HECK,THE GOVERMENT TAKES TO MUCH OF OUR MONEY. BE SURE AND BRING A BIG CAN OF CRISCO WITH YOU. I WORK BEST ON MY KNEES WHILE SOMEONE SLATHERS MY FAT ASS WITH CRISCO. BRING A BIG CAN, I HAVE A VERY LARGE ASS.

Yeah, I clearly understand that... but a slightly different twist, what
about a club owned repeater? I still want to emphasize my original question
on this.... so, it is still okay then for all the stuff that is being aired
on the various broadcast sources?? Come on, if we are gonna be a prude, at
least be consistent.

>

That would be true if one was merely stating whatever it was to anyone in
general, i.e. one-way communications. If one is intelligent enough, they
can discuss a wide variety of topics and still keep it decent. Just because
some bleeding-heart type can't deal with certain types of subjects, that is

their problem not mine. Develop a thicker skin and some debating skills
would be my suggestion.

For some reason you and a few others here are as well I believe. Then there
are the few village idiots of course..... :) :)

Now that is something a quite a bit different. Now discussion of the
situation of what is going on in Massachusetts (sp.?) can be dealt with
without referring to the sexual function related to that group. There is a
clear difference.

>
>
> >

An example of what I am referring to as far as what bothers me and concerns me..... Gee, it seems perfectly okay to "promote" a religion for example (and it is usually only one in particular... ooohhhh it's so bad to discuss any others!!!) but any discussion/debate of religion is bad?? A little hypocritical to me and a prime example of "controlling" speech. Otherwise, if no religious discussion/debate is allowed, then promotion should out as well..... Even to the point of saying "god bless anything" etc.

Ryan

2796. New Morse code symbor for "@"

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-17 23:08:47 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <40329EFF.3070105@ix.netcom.com>
Source record: 87471

In today's paper (Star Ledger) it said that the ITU established
a new code symbol for "@". It is the letters A and C run together.
Larry take note.

I wonder how much of what was in the catalog was actually in stock, and how
much was drop-shipped.....

In any event, that catalog was quite a wishbook!

The control op doesn't know where this is heading, as it is live and not
a pre recorded
program that he could screen before transmitting. So I'd dump it to
cover my ass....

230 tons, 79-1/2 feet long, 4620 continuous horsepower, over 8000 hp short term. In revenue service for almost 50 years.

>Unfortuantely
>they "didn't get around" all that much because of the limited amount
>of PRR electrified mileage.
>
2677 track miles, give or take. Washington Union Station to New York Penn Station, also Philadelphia to Harrisburg, several freight lines and numerous commuter lines around Philly.

Oddly enough, it was the New Haven which pioneered AC electrification, and eventually the GG-1s went all the way to New Haven under NH wires.

>I was raised and still live in the heart of GG-1 country, I got GG-1

On 100 pound rail, no less...

I remember walking between 30th Street station in Philly and classes at Penn, and passing under the elevated freight line west of the station while GG-1 pulled trains went overhead. One could look up and see the underside of the train as it went overhead...

>Much later in life I did a good bit of business with the electric car

>use the paint as a mirror . .

That was 1977, GG-1 4935, repainted in the classic Brunswick Green livery. I think it is now in Strasburg. Raymond Loewy, (born in Paris in 1893), was on hand for the intial run of the restored 4935 (May 15, 1977).

4877 was repainted Tuscan red and wound up with NJT (New Jersey Transit). 4859 was also redone and last time I saw it was under the shed in Harrisburg station.

There are others in museums but those are the best known.

>I saw the GG-1 they cut in half and
>converted into a brush-burner, the GG-1/2.

Actually a G-1 - the term "GG" comes from the wheel arrangement, two G arrangements back to back. "G" meaning two leading/trailing axles and three powered axles.

>And the GG-1 they turned
>into a monster snow blower.

4846 was cut in half, you may be thinking of one and the same unit.
>
>http://www.spikesys.com/GG1/

>
>One of 'em might run again somewhere some day. It's been my ongoing
>understanding that the overhead power system had been switched from 25
>Hz 11Kv to 60Hz

In the 1970s there was a lot of talk about converting the original 11 kV 25 Hz catenary system to 25 kV 60 Hz. Conversion of the older units with their AC traction motors would have been impractical.

However, research showed that the NHRR folks who had chosen 11 kV 25 Hz back around the turn of the 19th century knew what they were doing. Changing to 25 kV 60 Hz would have meant increasing clearances at every overpass and tunnel, changing every single insulator in the catenary structure, replacement of every existing substation and installation of at least as many new ones. Plus complete replacement of the signal and electrification system components connected to the track. Simply cost too much and the ROI wasn't there.

By the time all this was figured out, the decision to phase out the older equipment had proceeded too far to economically stop. Although capable of 100+ MPH, newer equipment such as the AEM-7 family of rectifier locos could do over 125 MPH, and the new Acela trainsets over 150 MPH, so the die was cast.

Another headache was that the newer passenger cars were HEP (Head End Power) equipped, rather than powered by the steam line, and to pull the new cars the GG-1s had to have a specially built power car for the passenger consist. Hardly a flexible arrangement. The newer locos had HEP capability built in.

When electrification was extended from New Haven to Boston a few years ago, it was done at 25 kV 60 Hz, since it was all new work anyway. No tunnels and few overpasses. The trains now in use can handle either type of power.

>but that's apparently not the case, the changeover
>never happened so operating a GG-1 should still be possible. *IF* they
>can replace the original PCB-laced transformer oil to an oil which is
>not as toxic.

Actually all of the ones that went to museums had their main transformers removed for the obvious reason. The biggest problem would be getting a custom made replacement transformer. Let's see, 4620 x 746 equals about 3500 kVA at 25 Hz - that's a bit larger than the weenie little things used in radio, even "professional" radio.

It is quite possible that a GG-1 that has been kept indoors could get a new transformer and run again. The main problem is that it's doubtful that any of the electrified railroads left would want a one-of-a-kind unit.

ahh, to hear the "duck call" air horn go by at over 100 mph once again...

btw, the PRR was a pioneer in the use of radio for railroad communications, too.

Dieter:

I'm not sure that "actively managing some sort of political action" would
be a violation of Part 97, either. The only firm restriction is against using
amateur radio in direct support of commercial interests -- i.e. direct
"business" use of amateur radio communications to facilitate revenue-
generating activities by a business. So, it would seem to me, that
organizing "political action" for or against gay marriage on amateur radio
would be OK, as long as the trustee(s) of the repeater(s) so used were in
agreement. You just couldn't use the same repeater(s) to advertise the
sale of rings, tuxedos, and wedding dresses to the betrothed gays.

Ryan:

The licensing system we had prior to April 15, 2000 was just fine, and
did not need any changes whatsoever. The ARRL (always capitalized,
BTW) is trying to increase it's membership by supporting ever declining
licensing standards. It hasn't worked yet, and I doubt that it ever will.
Too bad, because I see the League as a force for good in Amateur Radio,
particularly in these times when we faces serious challenges to our
hobby/service such as BPL, restrictive antenna ordinances, spectrum
re-allocation, and declining activity on the bands due to the Internet.
The League's failure to support the status quo in strong licensing
requirements, including Morse code testing at speeds up to 20 WPM,
has only served to polarize their membership and cause them to lose
the support of longtime members in good standing who know the
value of licensing requirements based on a firm grounding in technical
knowledge and practical operational skills.

The ARRL is digging it's own grave, and they're using progressively larger
shovels every year. If we get No-code HF licensing, you're going to see
a backhoe being delivered to 225 Main St, Newington.

I saw that myself. The new character (the first since the WWII era) is
called the "commat." Weird name; I would assume a character so named
was a combination of the Morse characters for a "comma" and the letter
"t." However, the "commat" is a combination of the letters "a" and "c."
Why don't they call it the "atsign," which is what it is supposed to represent?

For anyone who missed it, here's the story:

>expirations coming up.

All that means is that the dates when today's hams got their licenses are not evenly distributed. Renewal dates are driven by things like rules changes and vanity gates.

Once upon a time, FCC would renew a license whenever you modified (upgrade, address change), if you asked them to.

Then all of a sudden the rules changed and you can only renew two ways: either wait until the license is within 90 days of expiring, or get a new vanity call.

>I expect at least a 10K overall
>reduction of licensed hams by end of 2004 based on
>SK, lack of interest, etc. based on past renewal rates.

Another WAG, Bill? Note that even if a license is due to expire in, say, June 2004, there is a 27 month window during which it can be renewed. How do we capture all of that?

Ahh, on the last part we differ! I'm a firm believer in there being a time and a place for things. How I talk when I'm playing hockey and how I talk when I'm on the air are two radically different things, and I'm happy to keep them separated I can have a perfectly good QSO without getting into controversial subjects. But under private circumstances, I'm happy to discuss.

And as for what is aired on broadcast stations, I'm a firm believer that the place for the more sensitive stuff is later at night.

True, but if the non-renewal rate is the same then I predict a total drop of
all hams by something on the order of 10K by year's end.

> >I expect at least a 10K overall

I just made a VERY VERY curious discovery on the URL
I posted in the original thread.

It seems that a company
in Hong Kong called Maxima Communication Ltd
is actually the OEM for several brands of Icom, AOR,
Kenwood and Alinco ham radio products !!!

(Among these are the Icom IC756-PRO and the Yaesu FT-1000MP !!)

I am sure all you hams reading this who paid BIG BUCKS for
a "Japanese made" Icom or Yaesu actually paid for a radio
that was made by Maxima in Hong Kong.....!

(as soon as it gets an Icom or a Yaseu Japanese
name on it, plus made-in-japan, the price is
inflated BIG TIME ???)

Check it out 4 yourself boys!

http://www.maximahk.com/fpage.html

PROOF HERE! http://www.maximahk.com/pframe.html

....and all this time I bey you thought U were
gettin a "genuine" Jap radio! You hams been paying
Toyota and Subaru prices for a Kia and a Hyundai
all this time !

#snip#

The Maxima Communications pages describe themselves as a "distributor"
for the lines you mention, and a bunch of others. I don't see any
specific information which indicates that they are actually the
manufacturer.

I grant you, it's quite possible that many of today's amateur radios
have some of their board assembly done in China, or in some cases even
the entire radio manufacture done there - this is common enough in
most fields of consumer electronics. However, I don't see reason to
believe that Maxima Communications is the factory or OEM, based on the
site whose URL you posted.

Perhaps. But where are your numbers, Bill? How many licenses were due to expire in, say, 2003, vs. how many were renewed? (IOW, what % were renewed?)

I did some quick figuring and found that for 2003, for every 11 license renewed, 1 was renewed in the grace period.

>

>
>SWAG!

How about some numbers to back it up?

>> Note that even if a license is due to expire in, say, June
>> 2004, there is a 27 month window during which it can be renewed. How do we
>> capture all of that?
>
>True, but...
>Look at Speroni's grace period renewals for the last few
>years. No big numbers there.

For every 11 renewals there was 1 in the grace period.

Note also that despite huge numbers of actual expirations there have not been big decreases in license totals.

Will any of the proposed rules changes make a difference in these trends?

Sure! Now, how can ARRL increase membership?

>With a good percentage
>of the members being in the 55+ range there seems to be a good need to come
>up with new people to add to the membership ranks.

Age alone is not really a major factor because people are living longer, and many newer hams are from the ranks of the retired and near-retired. One of the *big* reasons you don't see many 20-, 30-, and 40-somethings at hamfests is that they're too busy working and raising familes these days.

>How about this for a marketing idea?? If the arrl recieves 200,000 new
>subscriptions for 2004 then they rebate some of the cost of the subscription
>rate as it is now? (Thats 200,000 over the existing memberships)

It would have to be structred in such a way that existing members would get the benefit, too.

Maybe it could work like this: If membership grows by a certain number, every member gets a rebate coupon worth a certain amount, good towards any ARRL publication or membership.
>
>Again, the license class/testing situation as it stands now is just fine and
>does not need any more changes for a while.

I disagree slightly. I think the entry-level license should be more balanced between HF and VHF-UHF. But that's about it.

More important, what's all the rush?

True. Is there anyone out there that has any idea how many hams out of
the total number licensed ARE active? I suspect that its something that
would be hard to find, since the ARRL is likely more interested in the
larger total number licensed.

I know most of the hams I associate with and know are active are members.

>>If the arrl is "sooooo good" then they should be working towards
>>increasing the membership.
>
>
> They are! Note that the license proposal offers a free upgrade of license class

Imagine if 25 percent of the ~400K new HF access hams join the ARRL? Of
course some of us think that might be the wrong way to go about it....

>>Not only would this actually help to lower the cost of membership by
>>spreading the costs of doing business over a bigger spread, but also give
>>more strength and credibility to the organization.
>
>
> Sure! Now, how can ARRL increase membership?

Their new Elmering program is a good start. That it is on the internet
is a good idea too. New hams will be coming into the service as much by
the internet as by the more traditional methods.

Here are two things that are a little tricky that they need to work on.
IMO, they need to convey spectrum threat as a serious thing without
getting too shrill about it. I think they do a pretty good job now, but
there always seems to be a few people out there that get panicky. Not a

good way to get introduced to Ham radio when a prospective amateur gets
to think that maybe there is no reason to get a license when s/he won't
be able to operate because of (name the threat)

Second, and I have no idea if this is even possible, is how to propose
anything without alienating a lot of Hams. I'm not sure about this one,
because from what I've seen, a number of Hams will probably be
dissatisfied no matter what the ARRL does. Maybe they are just
dissatisfied in general?

>>With a good percentage
>>of the members being in the 55+ range there seems to be a good need to come

> that they're too busy working and raising familes these days.

Glad to hear that from someone else! New and young Hams are a good
thing, but I think some people get obsessed with the perceived need to
have all these Hams licensed in Jr. high school. More important is new
and active Hams.

As time goes on, I am becoming more and more convinced that the digital
modes are *very* important to attracting new hams to the hobby. The kids
are usually very interested in anything that has to do with a computer,
and many of the older prospects find it fascinating too.

>>How about this for a marketing idea?? If the arrl recieves 200,000 new

Why do so many think that league membership is so expensive anyway?
Between the QST subscription and the members access to the webpages, the
ARRL is one of the best bargains around. Oh, and they do other things to
help us too!

I would like to get some opinions about
Universal Radio, Inc., located in Reynoldsburg, Ohio.

My reason for asking is they seem to never ship on time
and always have to back order, sometimes taking 30 days
or more to back order.

Rusty in Louisville

I generally get stuff there, by mail order, even though it's just down the road from me. I'm not in a hurry very often so haven't noticed what the speed is.

They keep moving the road so I don't bother trying to figure out the day's new traffic patterns. Let UPS figure it out.

I have found them very reliable.

I've ordered a few things from them and had good luck.

My impression is phone orders get processed faster than on line ones.

All Electronics is another outfit that seems to process phone orders faster than internet ones.

I've had the same experience with them, they did say when I phoned them
to chase an online order that they always had a LARGE amount of on line
orders. I was also quoted 30 days but the kit has always arrived much
quicker than that, even taking into account customs at this end.

Amen. I followed the niece's coursework thru Pratt. The artsy-fartsy
side is the least of it. Either ya already have it or ya don't and if
ya don't ya don't go to Pratt period. What she did get is piles of

courses in materials science, math thru Calculus, a good dose of
applied mecahanics (basic stress & deflection analysis),
manufaucturing engineering, etc. As she put it "Now I can at least
speak your langauge Uncle Brian." And she can too. In the meanwhile
she's up to her ears in computer graphics I can't even start to get
into.

I keep wondering how she'd "restyle" N2EY's Southgate 7 contraption .
.

Seems like. A cousin made a bloody fortune with his advertsing agency,
"retired" into being the Art Director for the Franklin Mint, was
elected a Fellow in the American Water Color Society and at 86 he
still has one-man shows in NYC twice a month. He's also a train nut, a
Pennsy fan. I have one of his train watercolors, one of his few
whimsical blasts from the past. One of these days I'll cobble together
a website and post it.

> Brothers.

Different times, different places. I guess there were exceptions but in the '50s the Philly parts & radio distributors were clustered downtown along Arch Street. A whole bunch of surplus joints and the two big parts houses, Almo and Radio Electric Service Company, known as RESCO. Both were family business single-location store front parts, general electronics and ham gear distributors. Wanna a couple resistors, no problem. A Collins rcvr and a "hi-fi" amp or a PA system? Here ya go. Both still exist but in far different forms and none of 'em have had anything to do with ham radio for decades. You might enjoy this link.

http://www.almo.com/corporate/history.asp

Over the years there have been a few ham-only stores but they never did very well and disappered. The parts stores still exist here and there even today but they're few and far between so it's easier to dial up Mouser and let the brown trucks do the running around. The HRO store here has an armlock on hamdom in these parts today. I got stupid and dropped into the store on a Saturday, unbelievable, there were folks there from as far away as NYC and Baltimore, took two hours to get to the cash register. No more "HRO Saturdays" for me!

In the end what matters is today and my view is that when it comes to finding "good stuff" it's all out on the web in volumes the Almos and RESCOS of days of yore never had.

> I've noted Globe King 500-C's going for $3,000+. I was amazed to get

> the scrap heap.

Tell me, I have a zonked TS-940SAT with all the options except the voice card, it's been updated by the Kenwood factory shop to the final

production design and it's loaded with filters. I love the radio but
it's full of creaky old point-to-point wiring, weird switches,
unmarked ICs, etc. I found a local shop which specializes in 930/940s
and as soon as I get it fixed I'm gonna dump it and run with the money
while it's still worth a few bucks.

> > If/when I ever make it your place you'll have to let read some of 'em.

I always had good service from them over the years. No complaints. I bought a Sony SW 100 off their used equipment site once for about $180 and it was spotless.
So they are good company from my experiences.

My telephone introduction is, "I'd like to get a price on an item but only if you have it in stock and can ship it immediately". That filters the just-in-time philosophy out of the ordering process.

A physicist and an engineer standing in bulap bags line up side by
side at one end of a basketball court.

There ia blonde to kill for at the other end of the basketball court.

Whoever gets to the blonde first gets his way with her.

The rule: Each successive hop has to be one half the distance of the
previous hop.

The engineer takes off like a bat outta hell. The Physicist doesn't
move and hollers at the engineer "You silly fool, you'll never get
there!"

The engineer hollers back "Watch me get close enough!"

I ordered some filters for an Icom 706 from them last summer.
Prompt, courteous service, only one filter backordered, and it shipped
exactly when they said it would (earlier, come to think of it).

I'd say deal with them with confidence. I've never had a problem,
anyway.

I bought a new radio from Universal Radio
and got a radio that didn't work and was a
return from a prior sale.

THe people at Universal Radio restock used
radios and sell them as new.

FUCK UNIVERSAL RADIO, I will never do business
with these crooks again.

Nobody really knows!

In fact, the first step is to define what is meant by "active". I know hams with little or no equipment whose only activity is showing up at Field Day each year - at which time they do a year's worth of work!

I also know hams with quite elaborate stations who only turn them on a few times a year. And others with modest stations (yes, even "shack on a belt" stations) who are on the air every day. Etc.

And there's various forms of inactivity. Some have truly lost interest (you could say that dying is the ultimate loss of interest) while others would love to be active but are genuinely tied up with other things like jobs and schools and family responsibilities. Or CC&Rs.
>
> I know most of the hams I associate with and know are active are

> Their new Elmering program is a good start. That it is on the internet
> is a good idea too. New hams will be coming into the service as much by
> the internet as by the more traditional methods.

Maybe.

There was a really good article some years back about why people
become hams. I wish I could find it again.

Basically the author identified three types of ham: the operator, the
communicator, and the tinkerer/builder.

The operator becomes a ham to operate radios - just for the heck of
it. DXers and contest ops are probably the best examples of this type.

The communicator becomes a ham to have conversations and exchange
messages. The ragchewer, honeydewer and public service type are
probably the best example.

The tinkerer/builder becomes a ham to do radio technology for fun. The
ham who always has a project going but is rarely on the air is this
type.

Of course most real hams are a combination, with a varying mix.

In the past, there wasn't much competition for these folks, because
for most ordinary people the only electronic communication options
were the telephone and ham radio. A sizable number of people got
licenses primarily to keep in touch with family members, make phone
patches, etc. In a similar fashion, the tinkerer/builders were
attracted by all the homebrewing.

But with the communications developments of the past few decades, ham
radio is no longer the only or even the primary option. Families who
used to all get ham licenses for honeydew purposes now just get cell
phones and/or FRS-GMRS setups. The techno folks have computers. Almost
everyone has email and cheap long distance.

Not so long ago, a phone patch home or a MARS message from a soldier
or sailor was a big deal. Now a lot of that is done by email, direct
from the war zone to home. (Friend of mine has daily emails with SO in

Iraq, for example).

So what's left are those who want to be hams because it offers
something those other services and technologies do not. Talking to
someone half a world away is no big deal anymore - but doing it on
your own personal radio setup with no intermediary network *is* a big
deal for some of us.

> Here are two things that are a little tricky that they need to work on.

> dissatisfied no matter what the ARRL does. Maybe they are just
> dissatisfied in general?

It's like politics:

There are some people who will vote Democrat no matter what.
There are some people who will vote Republican no matter what.
There are some people who will not vote no matter what.
There are some people who will vote for third parties no matter what.

And there are some people who are open to being convinced. They are
the ones to go after.

> > that they're too busy working and raising familes these days.
>
> Glad to hear that from someone else!

I have known many, many new hams in the past 20 years who got into ham
radio after age 50, and even 60, because they'd never had the time or
resources before. Great folks, but they do skew the demographics!

> New and young Hams are a good
> thing, but I think some people get obsessed with the perceived need to
> have all these Hams licensed in Jr. high school.

Part of that is the simple fact that we need diversity. Note how most
of the really young hams are girls....

> More important is new and active Hams.

AGREED! What good are big numbers if they're inactive?
>
> As time goes on, I am becoming more and more convinced that the digital

> and many of the older prospects find it fascinating too.

Yup - but also note that they are also fascinated by Morse Code, in
part because to them it is new and unique. They've grown up with
computers but radiotelegraphy is something new, exciting and unique to
them.

> help us too!

All depends on the perception. $39 all at once seems a lot more than
11 cents a day. If someone views it as just a magazine, it's
expensive. But it's not just a magazine.

You're likely thinking of the old WCKY at 1530 on the dial. It is now
WSAI which was at 1360. Confusing enough for you? WCKY was owned by
L.B. Wilson, a Kentuckian and the call stood for W Covington KentuckY.
Transmitters are on a hilltop overlooking Covington and the studios are
in downtown Cincinnati.

My HRO is the mechanical marvel but for performance, I'd have to say
that the RME-69 has it beat. If we talk about the modern era, I'm
partial to the 75A-3 (modified to A-4 with the Universal Radio product
detector) for the ham bands and the 51S-1 for general coverage.

> NICE radio!

It fell into my "if you don't turn it on and use it" category. I found
other uses for the money. I need to reduce the size of my collection of
heavy iron and increase the number of dollars. I can use the dollars
for modern marvels.

> Tell me, I have a zonked TS-940SAT with all the options except the

Not a bad idea. I think I may have told you that OH7XM was trying to
repair a TS-850 for a fellow in Helsinki. He found that the frequency
display unit is no longer available. That's one of the things which has
kept me away from K'wood.

Like I sed they didn't get around all that much . . .

> Oddly enough, it was the New Haven which pioneered AC electrification, and
> eventually the GG-1s went all the way to New Haven under NH wires.

Yeah, yeah, all the way to New Haven, whoopee. In the meanwhile
steamers had been running close headers from NYC all the way to Boston
in the 1800s on the same roadbed. What was it . . only five years ago
that an electric *finally* made it from NYC to Boston for the first
time? On the taxpayer's dime of course. Bleh!!

> >real trains on the West Chester line. Watching an inbound GG-1 pulling
> >a long string of 80 foot smoothside coaches glide into Clifton-Aldan
> >station was like a religious experience . .
>
> On 100 pound rail, no less...

The GG-1 rail loads were nothin' compared with the daily freights
which hauled ballast outta the quarries in western Delaware County in
those days 100 lb rail be damned. And they're still at it too.

Just a few years ago at some ungodly wee hour I got hungry and went to
the Wawa at Primos Station to dredge up a hoagie. There was an

outbound freight parked at the station, three big Geeps and a line of hoppers that wound out of sight around the Merion Ave. curve. I did a triple take, it was all orange AMTRAK equipment. A trainman had manually opened the Oak Ave. crossing gates and was waving traffic over the crossing while his buddies were tanking up on coffee and eats in the Wawa.

I went up the guy and asked him if they'd lost their map of the AMTRAK lines or what, Primos is *not* hardly AMTRAK country, right?. Wrong. Daily wee-hours AMTRAK Ballast train.

> I remember walking between 30th Street station in Philly and classes at Penn,

>
> 4846 was cut in half, you may be thinking of one and the same unit.

Tust me, it wasn't particulary difficult to discern the difference between a half of a GG-1 reworked into a brush burner parked on a

track just west of the main shop and the complete GG-1 snow plow
parked in the field on the west side of the transfer slide. Sheesh . .
!

WLW ran 500,000 kVA *OUT*. Plus it had 250,000 kVA worth of modulation
xfmrs.

> It is quite possible that a GG-1 that has been kept indoors could get a new
> transformer and run again. The main problem is that it's doubtful that any of
> the electrified railroads left would want a one-of-a-kind unit.

It ain't the railroads which run the museum pieces, it's the museums
which run 'em. Steamtown, etc.

> ahh, to hear the "duck call" air horn go by at over 100 mph once again...

The call of the Ruptured Duck . . Ugliest sound to ever come off the rails until the diesels trumped the GG-1.

When was the last time YOU heard a steam whistle played in PRR revenue service like I did?

Thought so . .

The GG-1 is a great niche piece but that's all it ever was compared with the steamers.

Snippts by recognized authorities on the subject:

In 1914 the Pennsylvania Railroad built, what many people believe to be, one of the most famous Locomotives to have ever roamed the rails, the K4 Class 4-6-2 Pacific. It was so successful that the Pennsy had 424 more built.

K4s #3678 - This is one of 4 K4s's that was Streamlined in 1940 with the help of Industrial Artist Raymond Loewy.

The reduction in total licenses has been about 3K since
the high point some months back. As for going into any
real number crunching, I ask what for? You must have
more spare time than I do. My prediction is just that...
a prediction based on what I think has been the renewal
situation and the greater number of expirations that

Speroni shows will happen this year.

> >> Note that even if a license is due to expire in, say, June

No it didn't.

WLW ran 500 kW - 500,000 WATTS, not kilowatts.

The motors on just one axle of a GG-1 do more than that. And there are six
powered axles.
>

The rumble/whine of a pair of SD-45s (each rated 3600 Hp with turbocharged 20 cylinder diesel) pulling an intermodal at 79 mph along the Water Level Route....
>
>When was the last time YOU heard a steam whistle played in PRR revenue
>service like I did?

Couple years back when the Strasburg ran an excursion down the Main Line to 30th Street and back. Their two steamers are ex-Pennsy, they were in Pennsy colors and on Pennsy track. Plus they were hauling revenue passengers.

>Thought so . .

When's the last time you were *inside* a GG-1 - not in a museum?

Thought so...

Oddly enough, above the truck level inside a GG-1 there's not much other than the main transformer and the center cab. The slopin ends are mostly empty space - coupla traction motor blowers, and the steam generator, but not much else. Low envter of gravity.
>
>The GG-1 is a great niche piece but that's all it ever was compared

Still not as cool looking as the J-3 Hudsons on the Water Level Route, scooping water from the Tivoli pans at 100+ MPH. (Of course water scoops were perfected

by the PRR and copied by Vanderbilt's little collection of branch lines).

Or as ungodly powerful as a UP Big Boy or even a Niagara.

Another thing PRR pioneered was radio on the RRs, starting with the inductive trainphone system *before* VHF FM radio was used on the rails...

Steve,

Regardless of where anyone stands on the code/no code issue, it appears there are two groups of folks. One group will step up to the plate and do what is necessary to obtain the license if they really want it. The other group simply waits until the requirements are reduced or dropped altogether. Yep, if I had wanted to wait until the code was dropped to 5 words per minute, I'd have waited 40 years. By that time, I'd have forgotten the code and since there was talk about eliminating the code, I'd still be waiting ;)

73 from Rochester, NY

No it didn't.

WLW ran 500 kW - 500,000 WATTS, not kilowatts.

The motors on just one axle of a GG-1 do more than that. And there are six
powered axles.
>

The rumble/whine of a pair of SD-45s (each rated 3600 Hp with turbocharged 20 cylinder diesel) pulling an intermodal at 79 mph along the Water Level Route....
>
>When was the last time YOU heard a steam whistle played in PRR revenue
>service like I did?

Couple years back when the Strasburg ran an excursion down the Main Line to 30th Street and back. Their two steamers are ex-Pennsy, they were in Pennsy colors and on Pennsy track. Plus they were hauling revenue passengers.

>Thought so . .

When's the last time you were *inside* a GG-1 - not in a museum?

Thought so...

Oddly enough, above the truck level inside a GG-1 there's not much other than the main transformer and the center cab. The slopin ends are mostly empty space - coupla traction motor blowers, and the steam generator, but not much else. Low envter of gravity.
>
>The GG-1 is a great niche piece but that's all it ever was compared

Still not as cool looking as the J-3 Hudsons on the Water Level Route, scooping water from the Tivoli pans at 100+ MPH. (Of course water scoops were perfected

by the PRR and copied by Vanderbilt's little collection of branch lines).

Or as ungodly powerful as a UP Big Boy or even a Niagara.

Another thing PRR pioneered was radio on the RRs, starting with the inductive trainphone system *before* VHF FM radio was used on the rails...

You miss the point. I'm interested in showing how this BPL is a two-way street.

Beacons are legal on 10 meters. 6 meters would also likely be effective. I'd prefer not using 20 meters for a 40 miles circuit which would require a considerable signal and also cause that signal to be stronger thousands of miles away. I'm interested in a band that isn't open and working someone far enough away to require 50 watts or more. That is how you demonstrate the two-way possibilities of BPL. Ya keep it all legal.

Daytime 160 or 75 meters would also require a fair amount of power for a 60 mile or so circuit, but you wouldn't generate the e-fields which would bother the BPL as much (but, on second thought, those power lines are long and would tend to pick up quite a signal). You have given me another thought here ... :))

You see, if an unlicensed transmitter is going to put some electric field into my receiver, I simply want to return the favor - with interest.

>When was the last time YOU heard a steam whistle played in PRR revenue
>service like I did?

Couple years back when the Strasburg ran an excursion down the Main Line to 30th Street and back. Their two steamers are ex-Pennsy, they were in Pennsy colors and on Pennsy track. Plus they were hauling revenue passengers.

>Thought so . .

When's the last time you were *inside* a GG-1 - not in a museum?

Thought so...

Oddly enough, above the truck level inside a GG-1 there's not much other than the main transformer and the center cab. The slopin ends are mostly empty space - coupla traction motor blowers, and the steam generator, but not much else. Low envter of gravity.
>
>The GG-1 is a great niche piece but that's all it ever was compared

Still not as cool looking as the J-3 Hudsons on the Water Level Route, scooping water from the Tivoli pans at 100+ MPH. (Of course water scoops were perfected

by the PRR and copied by Vanderbilt's little collection of branch lines).

Or as ungodly powerful as a UP Big Boy or even a Niagara.

Another thing PRR pioneered was radio on the RRs, starting with the inductive trainphone system *before* VHF FM radio was used on the rails...

I've had similar experiences. You are told the product is in stock
until the order is completed, then they tell you the item is
backordered.

I did want to test a Ten-Tec RX-340 there, and when the lady who
answered the phone asked someone else if I could test the radio, she
was told, "hell no, that's a $4000 radio."

So I drove to Ten-Tec and was given free-reign to play with the radio.
I bought one, from Ten-Tec, two months later.

All that said, Universal is kinda the lesser of two evils in the
shortwave supply biz. I look elsewhere when I can, such as Ham Radio
Outlet or one of the myriad national mail-order scanner shops.

Rusty In Lousiville,

I had a negative experience and would *not* recommend Universal Radio.
Alternatively, I *would* recommend C Crane Radio and/or Grove Radio:
I have made satisfactory purchases from both.

Good Luck
From sdl in Maryland.

Lennie...

YOU have NO BUSINESS chastising ANYONE for not answering any
questions...You have so many unanswered questions addressed to YOU out
there that even if you did start answering them (honestly or
otherwise...), the sun would nova before we got through them all.

> Except in here where "lesser" individuals are considered bottom-
> feeding slime, unworthy of saying anything... :-)

The only "lesser" people "in here" are those who lie, decieve and
antagonize...Such as yourself, for example.

No it didn't.

WLW ran 500 kW - 500,000 WATTS, not kilowatts.

The motors on just one axle of a GG-1 do more than that. And there are six
powered axles.
>

The rumble/whine of a pair of SD-45s (each rated 3600 Hp with turbocharged 20 cylinder diesel) pulling an intermodal at 79 mph along the Water Level Route....
>
>When was the last time YOU heard a steam whistle played in PRR revenue
>service like I did?

Couple years back when the Strasburg ran an excursion down the Main Line to 30th Street and back. Their two steamers are ex-Pennsy, they were in Pennsy colors and on Pennsy track. Plus they were hauling revenue passengers.

>Thought so . .

When's the last time you were *inside* a GG-1 - not in a museum?

Thought so...

Oddly enough, above the truck level inside a GG-1 there's not much other than the main transformer and the center cab. The slopin ends are mostly empty space - coupla traction motor blowers, and the steam generator, but not much else. Low envter of gravity.
>
>The GG-1 is a great niche piece but that's all it ever was compared

I've had mixed results with Universal Radio - one order went well and another didn't. I've had slightly better results with Burghardt (www.burghardt-amateur.com) and their prices are often better. However, since you added a shortwave newsgroup to your message, I should point out that their primary focus is on Amateur Radio, with very little shortwave equipment.

That ain't real railroading, that's just more boring-as-hell unit
material handling a la the conveyor lines in the UPS depots.

> >When was the last time YOU heard a steam whistle played in PRR revenue

A Strasburg fan trip ain't Pennsy steam revenue service, not even
close. I dunno how many operable steamers the Starsburg has today but
OK, if it's only two one of 'em ain't from the Pennsy, it's a
fat-boiler job from some other road. The Pennsy only ever had one of
those in modern times, the K29 Pacific which was scrapped decades ago.

REAL Pennsy revenue steam was K4s double-heading a long string thru
Norwood toward Darby at night when ya could see the fireboxes glowing
in the dark from Grandma McHale's front porch . . Had the B&O too with
all it's grade crosssings and ya could hear their steam whistles in
Aldan. Loudly when the wind was blowing in the right direction.

> >Thought so . .
>
> When's the last time you were *inside* a GG-1 - not in a museum?

Wilmington shops. Twice. Once in a good-to-go unit and once in the
restored unit while the work was in progress.

> Thought so...

That's part of yer problem . .

And how! I only became interested in the ARS at the time that Morse was
already at 5wpm, but there were those that suggested I might want to
wait. Not a good idea. I'd still be waiting, and if my predictions pan
out, I'd still be waiting a few more years...

I've ordered from them before and never had
any delivery problems.

Backorders are usually a function of the leadtime
from the manufacturer (all of them are in Asia)
and not the dealer. This issue cannot be helped.
It's the nature of supply vs demand.

Of late however, I've been ordering from
Texas Towers http://www.texastowers.com/
for ham related items and also Grove Enterprises
http://www.grove-ent.com/ for SWL items.

Both of these Dealers above were able to get me
a better price on a given item in several cases of
purchase over the quoted price from U.R.

2869. proposed telegraphy alphabet for LOTR tengwar

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-19 19:45:23 UTC
From: The Eternal Squire <eternalsquire@comcast.net>
Message-ID: <v56dnVOC06_flqjdRVn-jA@comcast.com>
Source record: 87545

Hi,

So far as I know, FCC regs allow the use of any code which is not intended to obscure the meaning of the message, and that this regulation can be satisfied by the mere publication of the code. This email is intended to publish a telegraphy (Morse) code so that it might be permissible to use.

This might be a fun way for LOTR fans who are also hams to communicate.

I've taken a look at the tengwar structure, and from it determined that the longs should be placed where the bows are, the shorts should be placed where the the strokes are, that shorter characters should have shorter codes, and that mirror image characters would be mirror images of each other. Special sequences are used to resolved conflicts.

Telegraphy per se would not have evolved in Middle-Earth since the technology went toward scientific application of magic by Feanor, but the tengwar could very likely have been adapted for the use of a heliography (mirror-flash) code for communication between Quenya and Sindar mariners. Vowels would never have been transmitted, similar to the style of stone carving.

With this is mind, here is Tengwanor ("sunwriting"): You could probably use machine translation from English to English-Mode Tengwar to Tengwanor for the purpose of computer assisted CW, or if you actually can line up 2 people literate in Quenya or Sindarin try it with a key!

Well, first, was it 64 in waltham?

Second, the repeater owner stop anyone for any reason from using the repeater, and he doesn't need to shut it off, he just has to tell them not to. That's the law.

Third, if you think thats bad, just attend a 6th grade health class anwhere in this nation.

Last year we had numerous events where middle school students were expelled for having oral sex in the stairwells, teenage pregancy which was "epedemic" at 1% and was going to be "cured" by sex education (I old enough to remember the bullshit) is now at 50%.

Kids these days are openly being challenged in high school "health" classes "how you know you are not gay if you haven't tried it"? The problem is built into our great educational system that ranks us near the bottom of every western society, even though we pay more than anyone else, but our kids are near the top of the list in perversion.

Frankly, I find this kind of thing disgusting on amateur radio, but if thats what it takes to raise the awareness of people, so they start objecting to the NEA's agenda in our schools, so be it. Frankly, I don't think any of us could have a discussion on anything sexual that would offend any person over 12. I'd bet most of these kids could qualify for sex counselors if there was a test. In fact there probably is - by the 10th grade.

Just hook up your MFJ SSB audio enhancer to your FM radio and catch the lyrics on some of the songs they listen to. The conversation on 2M was tame! Failing that, just catch an evening or two of TV during prime time.

73,
Len

I've had less than pleasant experiences with Universal. The staff seems
almost surly and almost equally unfamiliar with the equipment they sell.
Prices are higher, by quite a margin, over other dealers. My personal
preference is R&L Electronics in Hamilton, Ohio, just north of
Cincinnati.

> You might want to run it by the ARRL and/or Riley. ;^)

You might want to consider that word "unlicensed".
Part 97 = licensed
Part 15 = unlicensed

Had significant trouble with an R8B order. They did not ship as they promised and the worst part was they lied to me. The office manager was exceptionally surly when I called and asked what had happened. I doubt they know the first thing about good customer service.

From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <1QaZb.2312$2z1.2282@news01.roc.ny>
Source record: 87602

Dave,

You are correct, of course. Also, using 20 meters for a 40 mile away contact would not sit favourably with many folks and might be looked upon unfavourably by the FCC. Certainly neither I nor many folks would intentionally interfere with anyone. The unlicensed devices are not protected and must put up with any interference. Although there exist some filters to protect amateurs (and likely other users of rf spectrum), they are not overly efficient. They would tend (I would think) to distort the BPL somewhat - and the higher the speed, the less distortion the modems can put up with.

I probably shouldn't even have posted. These were indeed my thoughts, but the reality is that much of the posting (certainly much of mine) is not really related to policy. BPL would be related, but most of the posts are intended to inflame rather than discuss.

Your point, Dave, is well made and is, in fact, current policy with the FCC. I'd like to think this stuff could coexist with various HF/VHF communications, but have *severe* reservations about it; especially after W1RFI and others went through areas with BPL and put the video on the net.

Actually, the BPL question should cause many folks to try and reach some kind of agreement rather than the constant flames. BPL will affect amateurs who have passed code exams, amateurs who have not taken a code exam, CBers, SWL enthusiasts and others.

Certainly there will be 'attacks' (if you will) on some of the UHF/SHF amateur bands. Some accomodations will have to be made, hopefully with some spectrum replacement. Pagers and cellphones require bandwidth and now we have cellphones that take (and transmit) pictures. Wireless cameras will pass information over the air. The cameras will, most likely, be very low power and not a concern. Cellphones and similar devices, along with many other users (hey, digital tv has arrived) will make some demands. Hopefully, the FCC will try and accomodate everyone as much as possible (however, don't hold your breath on any government agency - both Republicans and Democrats are beholden to various, albeit often different, special interest groups).

What amazes me is that this *one* interest (the power companies with BPL) may well be allowed to wreck havoc with many (far more than just amateur, which is what some folks think) users. I'm not even sure how inexpensively BPL could be rolled out in a rural area. They would either need some kind of boosters or run a *lot* of rf power at the source. Maybe I'm wrong, but my thinking is that BPL would likely be targeted at suburbs where many might live too far away for DSL, but the distribution costs for BPL might not be

too much.

In any case, thanks for your input, Dave.

73 from Rochester, NY

Interfering with a Part 15 device doesn't happen to be illegal.

Part 15 devices are not allowed to interfere with any licensed radio service
and must accept (i.e. tolerate) interference from any licensed radio
service.

Basically that's what I tell my students. Regardless of their opinions on code testing, they should take control of their amateur radio participation by passing the current requirements and get on the air. At best they've avoided waiting and been able to enjoy HF for that period of time. At worst, they've spent a few hours to learn a useful skill that they may or may not decide to actually use on the air.

The marketing hype is cheap broadband for the rural areas. Economic reality is that it will probably never be extended into the rural areas even if some suburban areas do go for it. Every single transformer between the injection point of the signal and the end user must be bypassed with the BPL signal for that signal to work. If you only have one user every few miles, it will never pay off. And of course you've mentioned the power and/or signal boosters required. Periodic boosters all along the line will be needed.

In many ways a G is actually closer to a steamer than to a modern diesel electric. Particularly in the cab.

>> For streamlined steam engines, the special J-3 Hudsons used on the New
>> York Central's Twentieth Century Limited are the most impressive.

961 miles from Grand Central Terminal to Chicago Union Station in 960 minutes. With steam engines most of the way, on jointed rail. With stops at most major cities, speed restrictions on some curves and bridges, and engine changes at Harmon and for the stop at Cleveland. (The steamer would cut off outside Cleveland and an electric pulled the train into and out of the station. While the station stop was being made, the steamer would run around the station, get coal and water, and meet the electric on the other side). Oversized tender and scooping water meant the only coal stops were at Wayneport (NY) and Cleveland.

I agree about Grove Enterprizes. They have an especially good return
policy and rarely charge a restocking fee if all the literature and
packing materials are included in the return.

And I'll agree about CCrane. I had a problem with an used radio I bought from them (and the problem was not very great) and they went so far out of their way to make sure I was satisfied that it embarassed me!

I tried to talk them into taking some money ($25?) and they just wouldn't let me give it to them.

If CCrane has something I want, I'll buy it from them without comparison shopping - I could care less if they charge more; I don't mind paying for quality.

And just wait 'til I tell y'all about their battery charger!

Best I can determine, it is similar to a WMD. According to the
"LHA/WMD" sig I've noted, the two may be used interchangeably.

Glad you found an ally in your scheme to interfere. But you should
take it off-line to work out the details. Public postings of
stupidity of such magnitude really won't endear y/our cause to the
FCC. Best of luck.

TAFKA Rev. Jim says a Morse Code exam is a disincentive to the use of CW on HF. If they won't learn Morse Code, why do you think they'll learn this?

You might want to contact the FCC for specific requirements before proceeding. I sincerely doubt this newsgroup is "publication" to the extent expected by the FCC. Wider publication will likely be needed, such as in a major radio-related magazine or book.

Read them and the answers will become clear.

> The rules will change.

Have you seen anything in the notices indicating that BPL is about to
become part of a licensed service?

The question put to you was: How can a licensed user intentionally
interfere with an unlicensed user?

I'll add: 1) Is a Part 15 user required to stop interfering with
a licensed operation in any service?

2) Is a Part 15 user required to accept interference from
a licensed operation?

Have fun with these and see if you can get your rant back on track.

You have a rare ability to see the facts spread out before you and to
come to an incorrect conclusion. There was nothing I wrote which would
make me an ally of anyone in a "scheme to interfere".

I pointed out some reality. I asked a question.

Probably, I do remember seeing BC towers on a hill near Covington.
Maybe that is where my confusion started. Usta run up and down 75 to
Lexington and Danville. Made Danville to the airport in two hours flat
on one occasion by golly.

> Dad tried a couple of Buicks but has owned a number of Merc Grand
> Marquis Limiteds over the last couple of decades.

Barge pilot huh? Pop has a USCG Master's ticket?

Went to the local Enterpise vehicle rental store a bit back, told 'em
I wanted the cheapest set of wheels they had for a week. Like the
$10/day Metro three-banger they'd been hyping. One thing led to
another, I wound up with some monster Pontiac for the price of the
three-banger. Talk about "road shock" . . I'll spare ya my thoughts
when I first squeezed the beast into a parking slot at my favorite
food emporium. Tried to. When I turned it back in a week later I still
hadn't found out what a third of the stupid bottons in the thing were
supposed to do. Maybe Ralph Nader was right after all.

> I'm a small car guy.
> I'm now on my third Dodge Neon, this one is bright yellow and has a
> spoiler.

Yoicks . . . ! Didja install the mandatory resonator on the tailpipe
yet?

I'm big on small cars too, gots me a silly little 4 dr. '96
Chebby/Suzuki/Metro Geo w/150k miles on it. I keep telling myself I
really oughta get one for the other foot. Managed to blow a piston
last fall, $1,600 engine rebuild by my pet Benz wrench, runs like a
Swiss watch now. 'Cept my nickle-Extra N3 buddy backed his friggin'
monster Freightliner Classic into the rear end of my nice little Geo
and "reconfigured" a bit of sheet metal . . Back to the Benz shop . .
red body, green trunk deck and the rest is still in primer.

Dunno if I can trust it to make Wheeling & vicinity and back or not but I'm seriously mulling that prospect come the warmer winds of the days ahead. I figger if I gotta thumb it back home on the PA tpk. I might as well do it when it's warmer.

> > I keep wondering how she'd "restyle" N2EY's Southgate 7 contraption .
> > .
>
> I see it in a National 60's blue wrinkle cabinet with satin stainless
> panel. There'd be no miniaturization with plenty of room for mods.

Yeah, great start . . I like your National Blue and the brushed SS panel concept a bunch for openers. Needs to be expanded though.

Jim's obvious genius being that he's managed to come up with a 100W 80/40/20 CW xcvr which is spread across two whole shelves. Breakthrough systems design concept; "widely distributed CW transceivers".

About as counter-miniturization as it gets right? So he's already ingeniously solved that one. As a matter of policy I submit that we should concentrate on just the packaging problem and let him handle the "engineering". He is, after all, the group MSEE.

I'm thinking maybe your National Blue for the front surround and the SS panel then maybe something like a flip-top transparent blue tinted plastic cabinet along the lines of an iMac so that everybody could actually see how it works. Could also include a built-in soldering station for doing the never-ending mods? And a drawer in which to store spare eight-pin tube sockets of course.

OK, so it would be about the size of a steamer trunk and it would need castors to be able move it about . . details, details . . don't bore me with stupid details, "I'm a concept guy . . "

> > > Sure do. It sits next to the S-40A. The engraved German silver dial is

Nice old boat anchors, great dial mechanisms. I used an HRO 50 when I took the graveyard shift on 40M in my first-ever contest, a neighborhood club Field Day exercise. Smooooth tuning.

> I'd have to say
> that the RME-69 has it beat.

You got a 69 too??!

http://oak.cats.ohiou.edu/~postr/bapix/RME69.html

> If we talk about the modern era, I'm
> partial to the 75A-3 (modified to A-4 with the Universal Radio product
> detector) for the ham bands

I'm partial to the 75A4 myself, I had one for years which had the
W2VCZ front end mods. Best 160/80/40 RX out there until rigs like that
later 940s finally came along.

> and the 51S-1 for general coverage.

THAT's the one Collins rcvr I'd love to have. I have a meatball S3-B
but I'm gonna dump it. Needs a power cord. Which is a minor pain in
the butt job, need to dredge up a chassis plug.

> > > I've noted Globe King 500-C's going for $3,000+. I was amazed to get

> kept me away from K'wood.

Sure I remember that one. Sad. So far it seems like the 940s are still
being supported at least to some extent. Plus there are still ten
jillion of 'em out there and for absolute fact the repair shops are
hoarding junkers for parts in this country. But it ain't last forever
like the tube rigs have.

Kenwood made itself a legend in the '80s and a lotta folk still yearn
for a new competition-grade xcvr but lookit the junk they're peddling
these days. TS-2000 . . gimmee a break! There are persistent rumors
all over about Kenwood cooking some killer new xcvr in the back room
but I'm not holding my breath.

Cincinnati, like Rome, is built on seven hills. There are a number of
other hills on the Kentucky shore. Most of 'em have radio towers. I
operated from four spots during my days in the area: As WB4KTR/8, I was
a block off the U.C. campus on top of the hill in an area called
Clifton. I had no tower but was able to put a mast on top of the three
storey commercial building. I moved across the river to Fort Thomas in
'74 and operated from atop the hill in that town with a tribander on a
40' push-up mast. Site three was in Mt. Airy, across the road from a
nice, quiet 1600 acre city forest. I used a 60 foot tower there.
Finally, I moved to the west side of the city to Cheviot. That same 60
footer was used there and was then hauled around the world. There are
still tower bases for that one in the ground in Botswana and Tanzania.
The tower stayed in Dar es Salaam. The embassy now uses it for a
repeater antenna.

You know the drill: Mom feels "safer" in the big car.

In a tale similar to yours, we came back to the U.S. from Helsinki in
the late 90's and ended up with a Pontiac Grand Am. I was underwhelmed
with the underpowered, poor-handling beast.

> > I'm a small car guy.
> > I'm now on my third Dodge Neon, this one is bright yellow and has a

Naw, all stock. I stop using the performance tires when the factory
rubber gives up the ghost. It doesn't matter which tires I buy, the
twisty, hilly roads hereabouts make certain that I get only about 25,000
miles on them as the outside corners get worn down.

> I'm big on small cars too, gots me a silly little 4 dr. '96

It'll fit right in here! Just be careful you don't end up with a deer
pasted to the front of it.

I have a half side of beef in the freezer, your choice of beverage, a
comfy guest room and plenty of radio gear. If you talk 'EY into coming,
you guys can fight to see who gets the futon in the shack overflow room.

I understand, now that you've 'splained it to me. We could use a
four-foot rack, turned on its side. That's going to be one expensive
stainless panel.

Placed one order with Universal Radio, and it was promptly processed.
Have been waiting on a back order (Sony AN-LP1 Active Loop SW antenna)
since early January. I'm sure they're waitning on Sony to deliver to
them, but it's frustrating.

Dave, whenever I come across something posted here that lacks "good
amateur practice," your name pops up.

They've got a thing for cats. I often wonder if I should send them an
anonymous fax of a "Far Side" cat cartoon, the one where the cat is
being hauled away by two cops. ;^)

It would appear that my name pops up because you attempt to make an
association where none exists. I'm not involved in a scheme. I did,
however, ask you how a licensed service can intentionally interfere with
a non-licensed producer of RF. You've not yet come up with a response.

Dwight, I take off for a few days and this place gets even sillier than before! :-)

Too many get off on their own "realities" and leave this dimension for some emotionally-overloading FICTIONAL universe.

Tolkien's "Middle Earth" isn't on the ITU's Region list and New Zealand (where the film triology was made) still speaks English as a primary language. Tolkien himself was an Englishman.

With all the "magic" in the enjoyable film triology, they don't really need any simple on-off carrier keying to communicate...just speak into their rings...or a birdbath...or container of magic potion.

I was wondering why old Star Trek fan sub-set Vulcan lovers were until I realized the Vulcans communicated solely by "CW" (Curse Words) and sub-space radio. FCC has no regs on sub-space radio. Mama Dee would say (I'm sure) that it's okay to legally interfere with a sub-space radio if you have a federally authorized amateur radio license.

Gotta love the weirdness in here! :-)

>Why an NOI and now an NPRM for such a Part 15 device?
>
>The rules will change.

State Department Dave lives in a different reality and isn't quite up to speed on FCC abbreviations. An "NPRM" is a Notice of Proposed Rule Making but big Dave thinks the rules are already in place.

Mama Dee lives in another reality where she thinks it is perfectly legal for any licensed amateur to deliberately interfere with unlicensed electronics.

The gunnery nurse is on a peak of his manic-depressive cycle again and busy trying to peddle it to a single destination in his twilight zone.

tRoll keeps slipping in his macro butter. The Katapult King is off on an old-radio bender (better than shooting bears for the navy). Now Hampton wants to get agressive against an enemy of radio that hasn't been installed everywhere.

To them there are Monsters Under The Bed everywhere (not realizing they are looking into mirrors when saying that).

I think that all the regulars ought to go on back to tawking about all them amateur radio policy subjects like trolleys, muscle cars for orion-sitters, old radio broadcast stations, making fun of the U.S. military, making fun of others not liking them, architects, show biz folk, and the legality of federally licensed amateurs to do anything because they are Federally Authorized..

What with all those multiple copies of TAFKA Rev Jim's (which "is not his fault" even though I don't get such repeats on other news-groups or other problems with AOL), it's not worth staying in here. Except to see the creativity in rationalizing they are always correct and all others are mistaken.

You have the "studies" to prove this as a fact?

>Every single transformer between the injection
>point of the signal and the end user must be bypassed with the BPL signal
>for that signal to work.

Of course you KNOW the EXACT CHARACTERISTICS of "a BPL
signal," don't you?

I don't and won't presume to guess. But, you are AUTHORIZED by the
FCC to "legally interfere with any unlicensed service (of any kind)" and
are therefore blameless.

>If you only have one user every few miles, it will
>never pay off. And of course you've mentioned the power and/or signal
>boosters required. Periodic boosters all along the line will be needed.

Ah so, the federal authorization magically makes all amateurs into
technical experts who KNOW things all through answering a few
questions and passing a morse code test.

Must be that new "interest" thing in hum radio.

Of course. "Interest."

Feel free to "return favors" to cardiac patients using pacemakers and
other medical devices using RF coupling. Mama Dee says that sort
of thing is LEGAL because YOU HAVE A LICENSE and the federal
AUTHORIZATION to do such.

Feel free to generate TVI with your authorized amateur radio license
even though broadcast TV is also authorized. "Return with interest."
I'll bet Mama Dee will say that is perfectly legal, too.

Feel free to spritz your neighbors with RF 24/7. You are authorized to
transmit and it is so difficult to measure EM radiation levels by
amateurs. "Return with interest" all the irritation they caused you.

"Interest" in amateur radio.

Universal Radio is horrible. Period.

After giving them many chances after knowing better, they continually disappoint.

They NEVER have anything in stock, DO NOT communicate, and will not ship to addresses other then the billing address.

Thanks to their horrible service, I've gone elsewhere and always saved money. Thanks Universal!

The regs state that someone who wishes to use those particular hunks of
RF real estate will pass those exams. If someone hasn't passed the
exam, he or she has not met the qualifications for occupying particular
band segments.

That isn't the point at all. If such is your belief, there is nothing
to prevent doing away entirely with all but one license class and making
the exams much easier. You claimed that you didn't support watering
down the tests. Here you're making a case for dumbing down the whole
shebang.

> Clear enough for you?

I've never had any trouble understanding your view. You seem to not be
able to see where such a position can lead. If the material isn't
deemed necessary for an upgrade on a one-time basis, it is difficult to
justify it as being necessary any time.

> > > > >>And since it affects over 400,000 hams, it's not a small matter.

You must. You must. You support permitting those who have not passed
certain elements being granted a freebie upgrade. Such an upgrade is at
odds with incentive licensing.

> > If your agenda extends not just to the elimination of morse testing but

It's worse than that Dee.

Power lines used for BPL will have very significant losses per block
or however you might measure it and there is a distinct limit to the
number of amplifiers which can be used per injection point. Bottom
line is that BPL won't work unless it's periodically and frequently
fed by a fiber optic or cable TV type "primary source", a backbone.
The BPL system currently being installed in Manassas VA will make use
of a municipally-funded fiber optic backbone.

The simple fact of the matter is that BPL will not happen in the
boonies unless it's fed into the boonies on some sort of backbone. So
if Farmer Jones doesn't already have cable TV, DSL/ISDN or fiber optic
service available the probability of Jones getting a BPL feed is nil.
The FCC commissioners who are hyping BPL are either stupid beyond
belief or are lying thru their teeth.

It surely looks as if "Nancy" caught The Big Fish right here in the
present.

> There hasn't been a new BC-610 made for a half century or so, yet all
> IMAGINE they are still being made in Chicago and anyone can write a

I don't think that "all IMAGINE" any more than all believe "Ham Radio"
to be other than a defunct magazine.

> Countless radio yachts are
> moored by such boat anchors and many olde-tymers love to scrape off

I knew you'd understand. You've often regaled us with those tales of the
40 KW bandblasters at ADA when you were in your youth.

> "Expertise" as equated by the mental and emotional stability of seven-
> year-old Extras that all must emulate to "be as good as them." :-)

You can start by passing an "Extra right out of the box" and attempting
to match the experience of the seven-year-old Extra. I doubt you'll
have time to catch up with the rest of us, General, Advanced or Extra.

> Must be that all that radiotelegraphy rots the brain...

Naw, the first sign of brain rot is the inability to spot a
Hallicrafters troll.

No experience here with Universal Radio but I would whole heartedly
recommend R&L. I won't go into details here but they were very good to me.

Why is it not OK to freeband on unused parts
of 11 and 10 meters?

Organized, long term freebanders are very aware
where they operate and take great measure to
ensure against talking on an amateur frequency
or one that isn't heavily used on the freeband.
If the non-U.S. stations can operate ssb there,
why shouldn't I, especially if I want to have a nice
DX contact with one of them?

Many of us LIKE the law as it is, it keeps "yes men"
off the freqs. Same analogy as the gun issue...
when guns are outlawed only outlaws will have
guns...no, you won't find many freebanders lobbying
for change to open the freqs because the law as
it reads, doesn't bug us.

No rationalization is even needed except to reply to
folks that repeatedly ask over and over, "Why?" It is
these folks that feel they need a reason why we do
what we do, not us.

If the FCC goes with the ARRL proposal, then there will be a "one-time"
waiver of certain tests to accomodate the upgrades...which then means
that those new upgraded Extras or Generals do, indeed,
```

constitute fully qualified hams for those license
classes.

Believe what you wish. I support the "one-time" upgrades.
If that makes you think I support permanent "dumbing down"

then you have a lapse of logic somewhere.

Yawn. That's for the FCC to decide and, I suspect the FCC
can live with a one-time upgrade without believeing it
jeopardizes all future requirements. Governments often waive
criminal and monetary fines by waiving them and offering
special "tax amnesty" periods. After the "amnesty period" is over,
if you are found guilty of eevading the taxes, you think the
courts accept an argument that if the fines were waived once
they should be permanently waived?

> > > > > >>And since it affects over 400,000 hams, it's not a small matter.

And I don't. There's plenty of "waivered" situations in government
as already noted.

No waffle at all. THAT is my specific position and I do wish that licensing privileges did have a relationship to the additional knowledge being tested for.

> > > There can be no other explanation.

Depends on the decision. If it is a nice day and I have a decision
to make regarding Mow the Lawn or Take a drive in my antique car
with the top down...well I've taken the "feel good" decision on
that choice many times. Haven't you made similar decisions?
Wake up, decide it is a nice day and call your boss to tell him or
her you're taking a vaction day?

I copied one feature from RME: they didn't label much on the panel. They said
if you didn't know what the knobs did you shouldn't be using the set.

I probably have a plug that will work. And a line cord. Etc.

Got rid of all my Johnson gear, though (sniff). Adventurer, Viking 2 with 122,
Valiant.

If not "stupid beyond belief", then they just aren't bothering to read up on
the realities of implementation.

To be honest, I hardly glanced at anything beyond the first paragraph.
I'll have to turn off "hide read messages" and take another look to see what
you're talking about. Sounds silly enough to be worth the effort though.
Thanks for the heads up.

Yep. No one seems to have had a problem with that in the past.
Beginners aren't likely to run 1500 watts on 2m or 6m and "old hands"
are more likely to know what they're doing.

Burp. I suspect that not many FCC staffers care one way or the other.
The FCC has long abdicated its responsibilities in enforcement, planning
and testing.

> Governments often waive
> criminal and monetary fines by waiving them and offering

A freebie amateur radio licensing waiver is not a criminal matter nor is
it a fine. What is under discussion is amateur radio licensing and
whether the testing for certain classes of license are truly necessary
if they can be waived for thousands and thousands of people.

> > > > > > >>And since it affects over 400,000 hams, it's not a small matter.

Burp. I shall.

> Clearly the ARRL BOD doesn't
> accept your argument.

The League's board isn't required to accept it, nor have I noted any
opposition. I can make my views to clear to my Director and to those
other Directors and Vice-Directors I know. I've already made my view
known to Dave Sumner.

Seems to me I'm in good company then.

Not necessarily.

Izzat what we've had under discussion, taking a drive in an antique car
'cuz it's a nice day? How about calling your boss and telling him
you're taking a couple of days to mull over the ARRL's proposal for
revamping amateur radio testing?
>

It only seems to be playing at your place. A freebie upgrade is a
reduction in requirements *punto*.

They've also got a thing for that young lady with the short dress and high heels sitting in front of the radios in their showroom. Her photograph has been in every single catalog I've received (for years). Universal says they've been in business since 1942 and I have to wonder at this point if that same photograph has been in the catalog throughout all that time. Indeed, that "young woman" could be 70-80 years old today. However, the dress, hair style, and style of high heels, suggests the picture was taken in the 70's, which means she may only be 40-50 years old. :-)

2932. Yet another petition submitted

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-21 01:44:59 UTC
From: "Dee D. Flint" <deehays@qix.net>
Message-ID: <vKyZb.4147$t16.3101198@newssvr28.news.prodigy.com>
Source record: 87658

Well I read on qrz and eham where another petition has been submitted. If people want to delay whatever ruling the FCC finally issues that's probably the most effective way to do it. If I haven't lost count, that's 16 petitions.

>fed by a fiber optic or cable TV type "primary source", a backbone.
>The BPL system currently being installed in Manassas VA will make use
>of a municipally-funded fiber optic backbone.

Of course - BPL is just a way of getting that "last mile". Avoids having to go into people's houses and businesses and run wire, which is a serious cost and liability issue, to say nothing of consumer resistance. Putting bypass couplers on the pole pig is easy compared to running wire in a customer's house.

The big sell points are "no installatio! Just plug it in!" and the extreme portability. "Every power socket in your house is now a broadband internet connection" - "easier than dialup!" etc.

Of course the same is true of the various 802.11 alphabet soup systems coming out too - and those are faster!
>
>The simple fact of the matter is that BPL will not happen in the
>boonies unless it's fed into the boonies on some sort of backbone. So
>if Farmer Jones doesn't already have cable TV, DSL/ISDN or fiber optic
>service available the probability of Jones getting a BPL feed is nil.

Exactly. And for the same reasons: the customer density is too low.

Y'know, all those deregulators need some history lessons. A lot of infrastructure was built as govt' projects or as govt. edicts because the ROI was too low. Remember the REA - Rural Electrification Authority?

>The FCC commissioners who are hyping BPL are either stupid beyond
>belief or are lying thru their teeth.

None of them are engineers - they're "regulators". And they're tasked by your buddy Shrub to come up with whizbang technocures like hydrogen fuel and BPL. Right!

And Ralph Nader is going to run again. GEts worse every day.

>the most effective way to do it.

bwaahaahaa

>If I haven't lost count, that's 16 petitions.

That agrees with my count.

Neither the ARRL nor the FAR petition has an RM number yet. And K0HB hasn't even submitted his proposal. So we're not even close to an NPRM yet...

Just like the '60s all over again. A pile of proposals - watch FCC pick a bit of this and a bit of that and make nobody happy.

Maybe I should do a proposal....

garigue,

Any intelligent civilization would have either evolved heliography or
telegraphy
for specific needs. A magic-based civilization would have evolved
heliography,
a technology-based civilization would have evolved telegraphy.

You could either:
1) Think of it as a SETI exercise. CW would carry far better over
interstellar distance
on microwave frequencies than voice, RTTY, or image.

2) Just let the rest of us have some clean, healthy fun. Play is
healthy for the soul.

The FAR is an organisation that raises money for college scholarships to be paid to licenced hams. Their major annual fundraiser is a very large hamfest. Not on the scale of, say, Dayton, but pretty big. I used to go to it, but they moved the location further away. I used to be a member and get their newsletter, which is another way they raise money, and quite a few ham clubs are affiliated to them also.

That said, do you know what's in their petition. I am curious.

They've gotten The Word from much higher than the Commission or
NTIA or even DoD.

It will be interesting to see who the movers and shakers (read:
investors and controllers) of the BPL business are when the
inevitable Congressional inquiry is forced to take place.

So just how would Dave's 10 meter beacon generate TVI, interfere with pacemakers or other medical devices? There are many 10 meter beacons in operation, are they doing all this interference you blabber about? How about all the hams using 10 meters and all the other ham frequencies on a daily basis? Are they knocking out cardiac patients who have pacemakers.

Too bad you were never able to pass the ham exam, then you would know better than to make the absurd statements you do, just chalk it up to someone too old for his time I guess.

If BPL gets rolling in my neck of the woods, I will probably put up a 10 meter beacon as well, all legal. You wanna make something of it?

Something that is obviously beyond you capabilities. You sure have a hard on for those who have had the smarts enough to pass the amateur exam and get a license. Poor lennyboy, just can't hack it.

Go for it then. But if you fail in your effort, those that will
be "free" upgraded are qualified because they will have been
upgradedaccording to FCC rules at the time.

You still ignore the reality of non-relationship of
privileges vs license class. The ONLY logic behind
the current system is Incentive Licensing.

So how come many states have raised driver's license
ages for teenagers and not had any problems. If a
16 year old was qualified to drive a few years ago, why
can't they now? The point is that requirements can and
do change for various things.

> What is under discussion is amateur radio licensing and
> whether the testing for certain classes of license are truly necessary
> if they can be waived for thousands and thousands of people.

Testing for US hams has changed many times. When
Generals LOST privileges in 1968, no one raised a legal
argument that if a General was qualified in 1965 to
operate on all allowed Amateur spectrum, that the
same General should be legally qualified to do so after
Incentive licensing.

> the topic of discussion.

There are many analogies: Raised the drinking age, raised
the smoking age, driver's license age, waiving tax penalties,
waiving of illegal alien penalties. Not one situation has been
rolled back to the "waived" condition after reinstatement
of the waived requirements, laws or regulations. Legally,
it isn't an issue.

Absolutely correct. It is, in the end, the FCC's decision.
Nothing I have said, nothing I wish, makes it any different.
I can and will add my voice to those that comment to the
FCC as to my preferences.

Universal is a couple miles from my home. I've bought small items
from them, but have never ordered by mail any radio, so did not
comment on topic. But as far as the slender blond with the high heels
goes, I've seen her there and she's one of the hottest ladies in
amateur radio, but I don't think she has a license. She's probably in
her 40's.

Have you seen the gal in the Burghart advertisements? Wow!

You should. You're special. You should do anything you like because
you are better than everyone else. Because you are better than
everyone else, you should enjoy priveleges that no one else has.
Speed on the highway and cut-in at the exits. Help yourself to free
cable television. Commit insurance fraud. Do some insider trading,
and kidnap someone. Run for office.

This isn't them. It has six members. Look on eham.net under the discussion
about the ARRL being representative.

>That said, do you know what's in their petition. I am curious.

It's 59 pages but it boils down to this, in no particular order:

- Three license classes: Tech, General, Extra. Basically the same test
requirements as today (including 5 wpm code for General and Extra)

- No change to General or Extra privs

- Novices get upgraded to Tech, Advanceds get upgraded to Extra, both for free
(no test).

- Techs and Tech Pluses merge, get all same privileges as listed below

- Techs retain all VHF/UHF

- Techs get 100W PEP on HF on parts of 160, 80, 40, 15 and 10. CW/data on all
those bands, 'phone on 160, 10 and 15.

Basically, they dropped the code test for Tech Plus privileges, added data on
the CW parts, and added a bit of 160 and 15 meter 'phone. Much less HF than the
ARRL proposal, and you need a Tech to get it.

I think the proposal is on AG4RQ's website.

Lennie, is there some reason you can take time to antagonize and
muck-rake through other threads, but you cannot answer a question put
directly to you?

You were asked a specific and direct question in another thread,
ironically about BPL, however you choose to ignore it.

Bravo for me. Proves a point, but I see you still continue to
hound and antagonize others about BPL issues without offering one bit
of technical enlightenment about it yourself.

Not surprising since the answer will unravell you yet again.

Care to stop being a fool long enough to go to that thread and
answer the question?

I have some West Virginny time under my belt, I understand the "hills"
and the driving condx. A month in the coal mines in the Bluefield area
working an accident expert witness job was one of my "tours". Very
different part of the world when it comes to driving. And everything
else for that matter vs. here. Not a place for timid or anal drivers.

Eventually. Bigger priorities are looming for now.

I'm gonna spend a few hours running with the big dawgs this weekend as a reality check, third op at the N3RS baby multi in the ARRL CW DX blast. Haven't done one of these for a quarter century, this is gonna be UGLY.

The cord is a no-brainer, it's the female 8 or 11 pin plug or whatever
it is which is problem.

Yep. Maxim, Mrs. Maxim (she spoke fluent French, the language used in the
conferences back then) Ken Warner and several other ARRL folks went to the
Paris conferences of 1924, 1925 and 1927 to push for the very existence of
amateur radio. Amateur radio did not actually exist by international treaty
until 1927 - hams were simply a subset of various countries' nongovernment
radio services.

>The ARRL was a founding member of IARU - not the only founding

Once you get outside of Europe, North America, the British Commonwealth and
Japan, there aren't many of us. China has more than a billion people - and how
many hams? A few thousand, maybe.
>
>Quite a few, anyway! DX wouldn't be the same without 'em..... ;)

Right. And there are 682,000 US hams, which is more than twice as many as in
all of densely populated Europe.
>>
>>You might want to check out what the rest of the world wanted to do to

LOL. I have a similar experience to Tom's. Why go with an
apparent "90% approval rating" when you can go with a 100%
approval rating, i.e. try Grove Enterprises or AES.

> Of course the same is true of the various 802.11 alphabet soup systems coming
> out too - and those are faster!

I'm not up to speed on the methods which will be used to transport the
802.11 type signals into buildings but I assume it'll be carried over
existing cable TV wiring to a Part 15 tranciever/modem somewhere in
the building. Or something along those lines. Makes a helluva lot
more sense economically and in all other respects vs. BPL. In
particular they won't trash the HF spectrum like BPL does. I undertand
that they would use a band of frequencies which would "endanger" our
2.4 Mhz allocations. But like I posted somewhere else earlier, I'll
trade 2.4 Mhz for 14 Mhz any day.

The current show-stopper for the 802.11 crowd seems to be a lack of
standards and coordination. Which is very typical of fledgling
technologies, everybody wants their pet system to become the alpha
technology. And eventually evolutionary forces will do what they've
always done and some 802.11 type system or another will be ready to
market on a global scale. When that finally happens I expect that what
little bits and pieces of BPL might actually still be around will be
buried and forgotten. Quicky.

As as far as serving pore stranded Farmer Jones' needs if he's really
hot for broadband access all he has to do is sign up for dish service.
Which has been out there for *years*.

> None of them are engineers - they're "regulators".

They're bush-league (pun intended)politicians as usual and don't have
to be engineers, their job is listen to the FCC technical staff,
that's why the FCC has technical experts on the payroll. As if they
care about any "technical details" like obliterating HF radio with
BPL, 1600 Pennsylvania Ave. sed "Just DO it" and that's that. I've
been wondering if Commerce is being leaned on about watering down the
upcoming NTIA BPL study. I'll just bet it is.

>Oh, you simply misunderstood once again. I wasn't poking fun at the
>Army. I was poking fun at you personally, Leonard.

You consistently poke fun at anyone who opposes your opinions...
save on NON-radio discussions in here which have nothing to do
with any policy subjects.

You MAKE FUN of the United States Army because a veteran of
that service branch was assigned to ADA for three years and did
not kiss your [expletive deleted] godhood in reverence.

You MAKE FUN of the United States Army because they and the
other branches dropped morse code for fixed-point to fixed-point
communications back in 1948.

You MAKE FUN of the United States Army because they had HF
radio facilities a half century ago that makes the entirety of the
United States Department of State look puny in re communications.

You MAKE FUN of professionals in the firield of electronics because
you consider your amateur status as "better" than professionals.

All you can do, besides gabble about NON-radio subjects in here, is
to MAKE FUN of anyone you disagree with.

Your "fun" is really a pathetic attempt at humiliation which does not
have the effect you desire. It did not six years ago and does not do

so now.

You don't, or can't discuss any policy subject at length, only call those who disagree with you names and try to insult them.

You are an amateur extra, a shining role model for the amateur community.

Shrug. Not good for the amateur image to make others be like you.

Many pirates use ON calls from France
on HF bands. F1 calls are CEPT class
2 and are not allowed on HF bands in
France for now. So they have found a
trick, they buy an ON license in
Belgium and use the F/ON call in France.
It is not allowed since an alien call
cannot be used in France with F/ for
more than 3 months (CEPT rules).
Belgium has edited false CEPT class 1
licenses to CEPT class 2 operators
after WRC 2003.

ON4EHM is F1EHM

I am definitely note a "big dawg" but having fun. Picked up a couple of new DX countries while I was at it. However I've heard several that I'd like to get with pileups just to big for me to break (Oman, Ivory Coast and some others). Oh well maybe I'll get lucky sometime this weekend.

So is it up to 17 petitions?

The first 14 petitions came in very quickly. The League's was late, but
will at least get read because of who they are. I think we can effectively
discount any further petitions, the FCC will just give them a quick glance.
So an NPRM may not be long in coming.

I guess my date in the pool will probably turn out to be too early, as it
doesn't allow enough time for comments on the NPRM. I will make one more
predicition, though, Element 1 will not survive the process.

2982. Opinions on eham.com? QRZ.com? QTH.com?

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-21 20:35:23 UTC
From: Mike Rophone <Kilo@Watt.org>
Message-ID: <2004221-213523-638329@foorum.com>
Source record: 87715

QRZ.com was one of the first. QTH.com is one of the neebies. They
are opening up a bees nest of BS with their forums. Eham will publish
everything from racial slurs to hams demanding ham businesses be JAILED
if their parts are a week or two late. If you have something positive to offer,
you're generally censored. (I guess the theory is that flames bring "visitors"
to the site.)

I gave up on QRZ.com YEARS ago when they started the forum crap. The mud
slinging got so bad, it became worse than Usenet! (Hard to believe, huh?!)

The latest entry is QTH.com. Scott seems to be keeping it under control. But
how long before someone posts the wrong thing and QTH.com gets involved in a
libel case???

I know some of you are going to choke, but I think one of the best, most well
maintained, most positive, and most responses from classifieds is ARRL.org. Now
if they'd just get a DX Cluster server at the site, I'd be their all day!

2983. BPL NPRM

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-21 21:11:35 UTC
From: lenover21@aol.com
Message-ID: <20040221161135.05957.00000583@mb-m26.aol.com>
Source record: 87708

The docket number for the FCC's NPRM on BPL is 04-37. That is in the FCC's Notices as of 21 Feb 04 even though the Notice is dated 12 Feb 04.

As of a quarter to 1 PM, PST, on 21 Feb 04, the first - and only - document on 04-37 is from the NAC, National Antenna Consortium.

For those who wish to view the Comments on 04-37 directly, the web address for the ECFS is:

http://gullfoss2.fcc.gov/prod/ecfs/comsrch_v2.cgi

Type in 04-37 in the upper left form block and press the Enter key to retrieve the Comments...if any more are forthcoming. Note: The FCC has NOT YET posted the NPRM text on the ECFS, a procedure followed in the past with other dockets. It is not on the Office of Engineering and Technology page although the OET usually takes care of changes in Part 15..

Strangely absent is any Comments from the ARRL which some say is the lone ranger in "fighting BPL." [apparently not enough sliver bullets in Newington's holster although they've had a week or more opportunity to reply] The general goals of "Broadband" as stated by the FCC is dated 3/13/03 or very nearly a year past.

I believe it also proposes NO public question pools and
a 10 day waiting period before retesting a failed element.

Neither of these are likly at all. With the internet today, questions
will become public regardless of any effort to not publish them and
as for a waiting period on retesting, I can see no "same day"
retesting, but anything beyond that becomes an administrative
pain in the butt for VECs and FCC.

Cheers,
Bill K2UNK

> Maybe I should do a proposal....
>
> 73 de Jim, N2EY

You absolutely should. I'd enjoy seeing a PCTA propose the theory
that a Morse Code Exam is a disincentive to the use of CW on HF.

It's a QSL from Radio Djibouti.

I was fortunate (or was it unfortunate) enough to visit Djibouti in 1979. Quite the
experience.
No, I didn't hear them on SW then, but I did hear them on MW.

they are very good on returns, my friend bought a used antenna from
them, sent it back and they did not charge him a restocking fee.

there is one dealer www.radios4you.com /(electronic-specialties on eBay)
that does not give refunds under most situations.

from their website:

5. All Sales Final. Sorry we do not offer a satisfaction warranty and do
not accept returns. Reasonable attempts will be made to provide an
upgrade solution if requested and the original product is returned in
new condition. A 25% restocking fee will be deducted for returns without
explicit e-mail approval.

The FISTS proposal has more of a chance, I think.

It will be interesting to see when/if all these proposals get RM numbers and
how long it is before FCC does the NPRM thing. Perhaps we need another pool!

You are correct, sir! Thanks for the reminder.
>
>Neither of these are likly at all.

The 10 day wait is possible but not likely. How could it be enforced?

>With the internet today, questions
>will become public regardless of any effort to not publish them

Agreed. All it would take is one VE who wanted to make them public.

Also, someone would have to rewrite the entire existing Q&A pools. Who is going to bell that cat?

>and
>as for a waiting period on retesting, I can see no "same day"
>retesting, but anything beyond that becomes an administrative
>pain in the butt for VECs and FCC.

FCC won't do it.

The only way I could see it happening would be for there to be some sort of "clearinghouse" where all the VEs would send their records for comparison. The clearinghouse would keep the last 10-11 days' worth of records and look for the same person taking the same test less than 10 days apart, and pass it on to FCC.

Sun will rise in the west on the day that happens!

What *could* be implemented is "no retest at the same VE session" but that's about it.

>> coming out too - and those are faster!
>
>I'm not up to speed on the methods which will be used to transport the
>802.11 type signals into buildings

It's called "radio". aka "wireless". The modems/routers/hubs have these funny things called "antennas" on them and so do the boxes out on the utility pole.

>but I assume it'll be carried over
>existing cable TV wiring to a Part 15 tranciever/modem somewhere in
>the building. Or something along those lines.

No wires at all. You been to Microcenter lately?

>Makes a helluva lot
>more sense economically and in all other respects vs. BPL. In
>particular they won't trash the HF spectrum like BPL does.

It's also faster, more robust, and even more portable. Put a PCIMCIA cardmodem in your lapper and surf anywhere.

>I undertand
>that they would use a band of frequencies which would "endanger" our
>2.4 Mhz allocations. But like I posted somewhere else earlier, I'll
>trade 2.4 Mhz for 14 Mhz any day.

Some of them do and that's not good. Others are in the 5 GHz region. What is most important is that we can have a protected slice of GHz *and* those technologies can exist.
>
>The current show-stopper for the 802.11 crowd seems to be a lack of
>standards and coordination. Which is very typical of fledgling
>technologies, everybody wants their pet system to become the alpha

>technology. And eventually evolutionary forces will do what they've

BINGO! I knew you'd get it. Just like VHS smacked Beta's rear years ago.

>hen that finally happens I expect that what
>little bits and pieces of BPL might actually still be around will be
>buried and forgotten. Quicky.
>
Hopefully they'll not get off the ground. But it still has to be fought because
once they get established they can set a precedent for other bad technologies.

>As as far as serving pore stranded Farmer Jones' needs if he's really
>hot for broadband access all he has to do is sign up for dish service.
>Which has been out there for *years*.

The reason Farmer Jones doesn't have DSL or a cable modem is the same reason he
won't have BPL: not enough customers per mile.

Len,

I know you love to .... um .... shake things up .... but ... I had my 1st class radiotelephone license in 1966. I also worked in Electromagnetic Compatibilty testing in 1995. Believe me, even an improperly grounded power pole can cause problems. No, I am not suggesting "interfering" with an unlicensed service. I am suggesting asserting the rights of a licensed service. Unlicensed services may not cause interference and must put up with interference. You, and some others, think this is an "amateur vs. the world" thing. It is not. There will be problems with other services, I can assure you.

I had that 10 years ago - it was called Ricochet/Microtel, ran at dial-up speed using the 900 MHz non-licensed spectrum/technology, and worked just great. 24/7 connection with no extra phone line, DSL and Cable Modem service not quite on the market yet, and standards still being debated by several technical groups that I was a member of.

Just about five years ago they went broke and stopped offering the service. I still have the device in the original carton (had to look at it to remember the name). I had heard that they tried to revive it at higher speed in the 2.4 GHz Part 15 band, but they aren't offering that service in this area and probably never will, what with everyone using 802.11b LAN access.

>>I undertand
>>that they would use a band of frequencies which would "endanger" our
>>2.4 Mhz allocations. But like I posted somewhere else earlier, I'll
>>trade 2.4 Mhz for 14 Mhz any day.

The 802.11b "Wi-Fi" LAN technology operates at 2.4 GHz, not MHz.

The nice part about that is that Wi-Fi Channel 1 (IIRC) falls totally within the portion of the band that is shared between Amateur and Non-Licensed Part 15 users, and (theoretically, at least) a licensed ham can hang a super-high-gain antenna and a power amp on a commnercial Wi-Fi unit (CompUSA "special") operating on that channel, modifications that non-licensed Part 15 users cannot do.

Just think what 1500 W TPO would do to the neighborhood Wi-Fi users.

DX records. "King of the Hill".

>Some of them do and that's not good. Others are in the 5 GHz region.

802.11g - "Wide-Area" LAN or WAN. The Bay Area Wireless Communications Alliance members were discussing this about 5 years ago when I was active with that group. A higher-powered version requiring a point-to-multipoint microwave system license was starting to be pitched to a different crowd from the 802.11b (2.4 GHz) users.

>What is most important is that we can have a protected slice of GHz *and*
>those >technologies can exist.

>>The current show-stopper for the 802.11 crowd seems to be a lack of
>>standards and coordination. Which is very typical of fledgling
>>technologies,

These ARE standards. Just different applications. Carl Stevenson
is a national and international expert on them.

>>And eventually evolutionary forces will do what they've
>>always done and some 802.11 type system or another will be ready to
>>market on a global scale.

Both the 802.11b (short-range) and 802.11g (long-range) systems have
been marketed on a global scale for several years. Don't confuse
them with the differing standards for cellphoes and color TV - USA
vs the rest of the world.

>BINGO! I knew you'd get it. Just like VHS smacked Beta's rear years ago.

What makes you think that Beta died when VHS became the consumer
standard? The TV and broadcast industry standardized on Beta for
field recording, but alas Sony is no longer supporting it, having
had it replaced by digital technology. Look for the same thing to
happen with VHS - "everyone" is going to DVDs.

Count the pins and let me know, I have both. Plus the hoods and the clamps and more line cords than I can remember. 2 wire, 3 wire, whatever.

Just as long as they're not the oddball 9 pin ones that EFJ used. Those things are so rare that some owners have actually hacked into and modified their Johnsons to mate with less unusual devices.

>> Got rid of all my Johnson gear, though (sniff). Adventurer, Viking 2 with

>Good riddance, they're probably doing splendidly on 27 Mhz by now.

Not at all. The Adventurer doesn't work 'phone, the Vikings (I had 2) went to a ham pal, and the Valiant went to an AMer.

The one Viking 2 was used to make my one-and-only 160 QSO. But that's another story....

JJ,

I am reminded of Bagdad Bob's denials about the Iraq war...."I triple promise
you, there are no Americans anywhere near Bagdad" while on a split screen there
ran scenes of the Bagdad airport being occupied by allied troops...

Hey - maybe that's a technique - put together a split screen presentation....

All anyone has to do is take a portable SW receiver to the BPL test sites and
listen. Of course you first have to find the sites, and visit them when the BPL
is active. And you need a way to demonstrate that the noise is, indeed, BPL.

The reason for the flatout denial is simple: If interference of *any* kind is
admitted to, it opens Pandora's box for the BPL folks.

>upset by this?

I know I would be - that's one.

>(except Dave, of course - he appears, from his recent
>correspondence, to be annoyed that Kim is still breathing... :))

I don't see any indication that Dave, K8MN wants Kim to die. I do see an indication that Dave would like Kim to choose a more appropriate callsign.

So if we assume K8MN agrees with me, that's two.

Perhaps others would feel disrespected too.

So you're saying that Kim's feelings are more important than Jim's (N2EY) and Dave's (K8MN) feelings. And maybe more.
>
>In fact, if it had been my post, I would have revised it to names only
>immediately after Kim's original complaint.

But it wasn't your post. It was my post.

By your logic, I should change my screen name and email address and how I sign posts, because they are derived from my callsign, too.

>And seen what comments
>came back next. If I had several legitimate complaints (without the
>agendas that we have seen in several recent posts {not yours, Jim!)
>which obviously relate to Kim personally rather than just her

>calls back - but I would have written and offered Kim the option of
>going by name only or dropping out before I went ahead.

So I should potentially disrespect a bunch of other hams with appropriate callsigns to please Kim? And if some of them complain, I get to put their callsigns back but not Kim's?

Why not just do what I did and avoid the potential of disrespecting hams with appropriate callsigns?

>At least I'd
>be able to tell Kim that I tried to fix it for her, but it didn't work
>out with the rest of the group.

That would be passing the buck.

>Maybe it's just me, but I would try first to resolve her complaint if
>possible, out of respect for her as a fellow amateur.

I respect her as a fellow amateur. But I also respect other amateurs
with appropriate callsigns.

>I prefer
>compromise whenever possible - not compromising my standards, but
>finding a way to achieve a balance.
>
What about when your standards cannot be compromised?

>>Note also, Kim said that if I wouldn't use her callsign, she didn't want to
>>be on the list..
>

It was that it was not *my* (N2EY's) place to decide.
>
>Each of us is however completely in charge of determining what is
>appropriate for us as an individual, however. No question there.

And I say it's appropriate for me to post the calls and words of hams with
appropriate callsigns and to edit out the calls and words of those who
use inappropriate ones.

>Jim, my intent was not to criticize your standards

Well, you did. I could even say you disrespected me in the way you did it.

>- simply to point
>out that perhaps a more amicable solution to this issue was possible
>without compromising anyone's standards - finding a common ground for
>all.

I do not agree that your proposed solution wasn't a compromise to my standards.
>
>That's it - that's my point.
>

And here's one more issue to think about:

Every community, including the ARS, has its standards. Consider residential neighborhoods as an analogy.

Some community standards are concretely and legally stated, like zoning ordinances and building codes. Others are part of the general community culture, such as keeping one's property in reasonable repair and not mowing your lawn at 3 AM. A lot of the latter come under the heading of "being a good neighbor".

If someone wants to be accepted and respected in a community, it is necessary to act (more or less) in accordance with reasonable community standards. That doesn't mean everyone must be exactly alike and never do anything different than the neighbors, but it *does* mean that community standards need to be considered.

The fact that not all community standards are codified into law doesn't mean they aren't important. For example, painting one's house in odd colors and patterns may be legal in some communities, but it's not the mark of being a "good neighbor".

What Kim wants to do is to reject the ARS' "community standards" in her choice of callsign, yet still receive the same respect and acceptance from other hams as those who choose appropriate callsigns. Just like the person who paints their house purple and orange in a dazzle pattern, then wonders why the neighbors put up fences and shrubs to conceal the view.

Bleeping Bill,

There is no East Germany.

Let's take the time machine back to 1972....

Teacher: "Brian Burke, what key factors led to the drafting of the 1964 Civil Rights bill?"

William-Brian: "I understand that a number of Frenchmen commonly disregard their own laws."

Teacher: "Is it possible for you to answer a direct question?"

William-Brian: "This is America, not East Germany. We have the right not to answer without some thug putting is jack boot on our throat."

This particular individual has no amateur callsign. He is Leonard H.
Anderson but he shouldn't be confused with Leonard H. Anderson WA6HKH of
Montana, whose views are quoted in this month's issue of "CQ".

There's certainly no cause for concern or alarm.

He needs a standard 11 pin female socket (no mounting flanges) with
hood.

You keep trying to make this about a group of people. It isn't. It is
about you.

> You MAKE FUN of the United States Army because a veteran of
> that service branch was assigned to ADA for three years and did
> not kiss your [expletive deleted] godhood in reverence.

No, I haven't made fun of the Army. You keep trying to involve others.
It is about you.

> You MAKE FUN of the United States Army because they and the
> other branches dropped morse code for fixed-point to fixed-point
> communications back in 1948.

No, the Army isn't involved. There's only you.

> You MAKE FUN of the United States Army because they had HF
> radio facilities a half century ago that makes the entirety of the
> United States Department of State look puny in re communications.

Neither the Army nor the Department of State has anything to do with
this.
There's only you.

> You MAKE FUN of professionals in the firield of electronics because
> you consider your amateur status as "better" than professionals.

Not at all. I spent a career as a profession in the "firield" of
electronics. My professional career and my decades as a radio amateur
are not linked. As a radio amateur, I never thought I was better than
myself as a professional. But enough of this, the issue is you. While
you worked as a professional in radio, you've never been a part of
amateur radio.

> All you can do, besides gabble about NON-radio subjects in here, is
> to MAKE FUN of anyone you disagree with.

Wrong again, Mr. One Track. This isn't about "anyone I disagree with".
It is about you, Leonard H. Anderson, self-proclaimed advocate for
something-or-other in amateur radio.

> Your "fun" is really a pathetic attempt at humiliation which does not
> have the effect you desire. It did not six years ago and does not do
> so now.

Check your wayback machine, Len. It has been well in excess of six
years.
You come off as pompous and condescending. You'd like to convince us
that no one here can possibly know as much as you about radio. You'd
have us believe that we should accept your view of how amateur radio
should be regulated, yet you aren't a part of amateur radio at all.
That and you're easy to humiliate.

> You don't, or can't discuss any policy subject at length, only call
> those who disagree with you names and try to insult them.

We can always count on you for a laugh, kindly old pirhana. Tell us how
you conduct yourself and why you so frequently draw fire.

> You are an amateur extra, a shining role model for the amateur
> community.

And you are not. You're not a Novice. Your'e not a Tech. You're not a
General. You're not an Advanced. You aren't a participant.

> Shrug. Not good for the amateur image to make others be like you.

How would you know? You aren't involved.

Who would one talk to over those vast distances? We use Morse code, while most off-world residents used Zugth code. Besides, code use elsewhere is still declining after being dropped as a testing requirement about 6,406k years ago.

It's hard to tell if the picture in the catalog and the pictures on the web site are of the same woman. None of the pictures are close-ups of the face. Regardless, the woman on the web site certainly does fill out that top very nicely.

I think Michael was talking about the picture in the catalog (as 20-30 years ago), not the pictures on the web site. The woman in the catalog is much younger looking - perhaps the same woman, but an older picture of her.

That's what matters! unless of course you go in to build score which
is a whole different ballgame altogether.

> Picked up a couple of new
> DX countries while I was at it.

There ya go. If it wasn't for the battalions of "casual ops" like you
there wouldn't be an ARRL DX contest.

> However I've heard several that I'd like to
> get with pileups just to big for me to break (Oman, Ivory Coast and some
> others). Oh well maybe I'll get lucky sometime this weekend.

Unless you have a pile-buster station avoid the pileups like they're
the Plauge in the major DX contests. I cannot tell you how many times
I've seen examples of some exotic or another generating a ruckus for
maybe a half hour or so then suddenly nothing on the freq. As often as
not he's off hopping up or down the band quietly sniping random q's
here and there in order to avoid any more 30 over 9 pileup Excedrin
headaches. Expeditions excepted.

Just keep surfing the band at a decent rate in some orderly manner and
listen, listen, listen. But jeez don't just park! He'll likely show up
outta nowhere usually working somebody else. So get good at polite and
fast tailending. Polite beats pounding on him for obvious reasons plus
you might also attract another pileup. I shot myself in the foot a
couple times with that one and I'm still in a hurt for Bouvet.

So the mobs are pounding the Oman station into the ground and in the
meanwhile the Big Dawgs have either worked the station in the Ivory
Coast or have lost interest in him or have just plain lost him and
bingo he's now "available" 30 Khz up the band and ya got him.

If ya just *gotta* do a pileup however NEVER jump right in if yer a
Little Dawg: Get a quick grip on his modus operandi. Use both of yer

VFOs. Find the guy who just worked him and call him up 500Hz. Or whatever game he's playing that seems to work. Smarts, stealth and treachery beats kilowatts every time.

Sometimes.

Worse than rrap? Come to think of it, from what I've heard, rrap is a
quite civil
tea party compared to some of the soc.culture.* groups. s.c.india
particularly
bad. And years back in s.c.china it seemed that "running dog" was a really
bad insult. Back when Tienamen Square happened I looked at s.c.c to see if
there was any "insider" insight to be had. Not much it turned out. it
was mostly
bored grad students arguing with each other.

That would be surfficient enough of a rule change. Some VEs arrange
things where
the guy who registers the testees and takes the fees leaves before the
tests come out.
So it isn't possible to reregister and pay another fee at the same
session.

(SNIP)

I just read the proposal. Much of the code retention argument
is the same as was raised and dismissed by the FCC in
the R&O for 98-143...howvever, there is a section
21 that I have no clue what they are talking about. It reads:

"21. Finally, it should be noted that by removing the Morse
radiotelegraphy requirements from the General Class and
Amateur Extra Class licenses, the Commission would be
creating the groundwork for a socially divisive caste system
within the Amateur Service - the 'no-codes' versus the
'know-codes'. To some degree, this is already a fact in
some circles. Amateur radio, by its very nature, is a very
social pursuit. However, by removing telegraphy from the
requirements of the General Class and Amateur Extra
Class licenses as petitioned by some in the community,
the Commission is potentially embarking upon a mission
that is virtually guaranteed to become a very expensive
enforcement nightmare." End of Quoted material

What does dropping code testing for General or
Extra do that is then "guaranteed to become a very expensive
enforcement nightmare."

Do the petitioners believe that if a General or Advanced
doesn't pass a code test that he/she wouldn't be

allowed by the FCC to operate morse?

What am I missing here?

Cheers,
Bill K2UNK

Doesn't surprise me. The 9th circuit is usually in "left-field" as compared to the rest of the appellate circuits, so I understand from their ruling history - even when they do get something technically correct (e.g. "under God" in the PoA being unconstitutional by violating "freedom of religion"). Most of the cases that I have seen to come to that conclusion are in the tax area.

I disagree: 47 CFR 97.113(a) [snipped]: "... to facilitate the business or commercial affairs of any party." Generally, a party seeking election of a candidate to public office or an organization backing a ballot measure MEETS this condition, regardless of whom or over what is being voted on. Of course, this only restricts those actively engaged in the campaign; not two citizens uninvolved (except for their casting of votes on election day) who are merely discussing the issue.

However, such is allowed to another (inferior) "radio service" in 95.413(a)(10)!
;-)

Actually the VEs always have the option to not run a retest. When we've had limited time access to the facility or have limited time due to other commitments, we've simply stated no retests at that particular session.

Why not? Is the Tech written too difficult for him to pass?

>He is Leonard H. Anderson

How do you know? Have you actually met him or otherwise verified his identity?

I could claim to be a lady with red hair on this newsgroup - how would you know
I am not?

Reminds me of a PHC joke:

Two penguins are in Antartica.
One penguin says to the other: "You look like you're wearing a tuxedo"
The other penguin replies "How do you know I'm not?"

>but he shouldn't be confused with Leonard H. Anderson WA6HKH of
>Montana, whose views are quoted in this month's issue of "CQ".

I did see that but WA6HKH's address was given as Sun City or Sun Valley or some such in California.

>There's certainly no cause for concern or alarm.
>
I did not think there was.

I agree.

> When we've had limited time access to the facility
> or have limited time due to other commitments, we've
> simply stated no retests at that particular session.

I believe you don't need any reason to not allow
retests. There is no "right" to an immediate retest
for anyone regardless of how long the test session
may actually be.

Cheers,
Bill K2UNK

Bleeping David, I stand corrected. I should have stated "TFUSSRSCFKA
East Germany." It never occured to me that the image of human
opression in that former country would have been so fleeting. How
quickly you forget. But thank you for your vigilance as netgroup cop.
It is important work for you. You are free to go back to working out
of band Frenchmen again.

See how you play it? I tell you that there is no East Germany; you tell
me that I've quickly forgotten. I didn't forget anything, Brian. I
told you that there is no East Germany.

> But thank you for your vigilance as netgroup cop.

You did not receive a citation. You are not required to pay a fine.

> It is important work for you. You are free to go back to working out
> of band Frenchmen again.

And you are free to continue your fetish over things French. Give my regards to Doctor Evil.

It might be that or it might be that his decades-long interest in
amateur radio is a sham.

> >He is Leonard H. Anderson
>
> How do you know? Have you actually met him or otherwise verified his identity?

My feeling is that an imposter wouldn't have revealed so many easily
verifiable claims such as previous workplaces, address and the like.

> I could claim to be a lady with red hair on this newsgroup - how would you know
> I am not?

Good point, though if Len has the red hair, I feel confident that he has
the red rubber nose and shoes to go with it.

It was good training for the Foreign Service days ahead. Unpack
everything, put up the antennas, operate for two or three years, take
down the antennas, pack everything, move to a new location, unpack
everything, put up the antennas...

> > That same 60

Most of the U.S. machines are now much better than those made a couple
of decades back. You'll find a few Q-ships though. The Pontiac Vibe,
for example, is a Toyota.

We have some of both but they are usually self-removed from the gene
pool.
Unfortunately, they often take others with them.

Yes. They are very courteous and helpful. I too have had slow response
insofar as when my item leaves their facility. Takes a week or more
from when the order is placed. I also have experienced the back order
phenomenon on numerous occasions.

I'm not one of those "big dawgs" either, Dee...What I like to do
with the contests is set some personal goal within the contest...

In the 2000 ARRL Sweepstakes, I wanted to work (1) W.A.S. within
24 hours, and (2) A Clean Sweep...I didn't get to put in the time to
do the "under 24" part, although I did get my Sweep's Mug for both the
CW >>AND<< SSB weekends!

I'd like to go portable and work this years Sweeps from VO1 if I
get the chance...

Well, Your Scumminess, you started out on a good foot, posting the
information about the NPRM, but then you HAD to take a snide swipe at
"someone" with the "Lone Ranger" crap.

Who is the "who" that you refer to as allegedly saying the ARRL
is the ONLY entity "fighting BPL"...?!?!

Just another LennieLie as far as I can see since even the ARRL's
own website site has cited other organizations who have come out
AGAINST the BPL proposition.

Just wondering, Your Putziness...WHO is the WHO to whom you
refer...?!?!

<aa2qa@frontiernet.net> writes:

>I know you love to .... um .... shake things up .... but ... I had my 1st
>class radiotelephone license in 1966.

Irrelevant in this newsgroup. Some of the amateurs in here seem to
think an Amateur Extra class license is a "PhD in radio." No other
radio licenses are allowed to figure in...

>I also worked in Electromagnetic Compatibilty testing in 1995.

Another guy in here has you beat...worked as a purchasing agent
for a set-top box maker. High-level knowledge.

EMI testing, Tempest, the whole works is fairly normal work on any
DoD contract. So? You think BPL is equivalent to an EMP?!?

>Believe me, even an improperly grounded power
>pole can cause problems.

Yes, all those wooden utility poles are real tough radiators...?

>No, I am not suggesting "interfering" with an
>unlicensed service. I am suggesting asserting the rights of a licensed
>service.

OK, plant the flag and claim HF is the sovereign terrortory of hams.

Mama Dee has interpreted the law and sent down an encyclical that
any ham can do anything as long as they have a LICENSE and "are
authoritized to radiate."

Not quite right, that, but it pleases the machismo of some.

You rather clearly stated an INTENT to interfere. Intent is not
evidenciary per se, but it doesn't win you any friends in court..

>Unlicensed services may not cause interference and must put up
>with interference.

Nooo, not quite and the OET won't buy that by itself, nor would any
courts in most countries, USA included.

If all could be summed up that easily, it would be "perfectly legal"
for you to hold a 5 W HT up to the abdomen of a pacemaker wearer
and thumb the PTT switch. Are you licensed by the FCC to
deliberately interfere with anything? I don't think so. We can toss a
coin to see if the pacemaker wearer has an infarc.

>You, and some others, think this is an "amateur vs. the
>world" thing. It is not.

I didn't write that. You imagined that in another burst of macho testosterone, ASSERTING yourself.

Does your geographic territory NEED another beacon? The pioneering and exploration of HF was pretty much over with when the USA got into WW2. If you NEED QSLs so much, advertise for some on the Internet.

>There will be problems with other services, I can assure you.

Duhhhhhh...no kiddin, huh?

Jim, I'm more than well aware of potential interference problems in radio, all the way from VLF on up into the microwaves. That's where I've been working for a half century and still keep my hand in.

I've also had four tours of duty as a juror and understand quite well what INTENT is. No LLD needed for that.

All the aging olde-tyme hammes in here seem to be ASSERTING themselves in some adolescent machismo in tuff tawk...and none of them has demonstrated knowledge-one about the BPL signal levels or the data protocol or anything else about any BPL system proposed. None of the tuff tawkers seem to know anything yet they all talk like they are a cross between expert PhDs in EMI and The Terminator gutturally announcing "Ahl be backkk." [just before driving through the door of a police station and killing lots of cops] :-)

All that anyone seems to want to do is wait until Newington spoon-feeds them "what they need to know" and cause a lot of wing-flapping and squawking. Nobody seems to check the FCC website. Nobody has gone out to try to find a representative technical document from one of the proposed BPL systems. All seem to be whistling in the dark while tiptoeing through the graveyard.

The NPRM is announced as docket number 04-37 and there is one document (as of Saturdy, 21 Feb 04) on that NPRM. The text of the NPRM isn't available on the 'web. Perhaps the executives in Newington have a copy...the general public doesn't have it available.

None of you KNOW what the characteristics of any proposed BPL system IS, yet you are all "expert" on it becoming the downfall of HF for Hams. Will it interfere in general? Probably. Will it have terrible interference and cancel all the events in the ham playground? Unknown.

Meanwhile, think about how you wing-flappers appear to the guvmint and the industry, all the while demonstrating near-absolute-zero on thinking and radiation expertise. Tawkin tuff in here doesn't cut it on getting rid of it. Tawking tuff doan police your playground. EM spectrum ain't da 'hood and you guys ain't da onley Boyz in da HF 'hood.

>years ago.

:-)

Careful, Dwight, now you will start the morse-zugth code wars all over again (done in this newsgroup 8,192 years ago...according to Google).

At the Interstellar Telecommunications Union (ITU) of Stardate 1928 on the 3rd planet of Arianna Huffington IV, Mrs. Hiram Percy Maxim spoke French to the assembled delegates thereby starting an interstellar dispute over which on-off coding was superior. [French is not an inter-stellar language] She had used naughty French words after being refused to use the specially-constructed Terran rest room.

The Interstellar Telecommunications Union standardized all amateur licensing at 5 WPM (Words Per Month) of the de facto standard, Interstellar Zugth Code. The ARRL, totally without kidney function [they were pissed off], has refused any comment on this serious (or should I say Sirius?) rift in interstellar radio requirements. Even today there is absolutely NO mention of Zugth Code on the ARRL website.

The militaries of the galactic region adoptes SubSpace Radio with high-speed video-audio-mental data rates and gave up any thought of going back to prehistoric Zugth (or Morse) codings. Clearly, according to the Interstellar Amateur Radio Union, the militaries were not fulfilling keeping up the heroic, glorious tradition of on-off codings.

After all, Interstellar Zugth Code is the "universe language" argued the remainder of the Interstellar Telecommunications Union delegates and morse codings are based on a minority written language of a minority of the Interstellar Community. They were of the United

Opinion that those learning quaint morse codings were not showing any dedication and resolve, and especially, Interest in raddio, to the Interstellar Community.

> Well, Your Scumminess, you started out on a good foot, posting the
>information about the NPRM, but then you HAD to take a snide swipe at
>"someone" with the "Lone Ranger" crap.

The Public Notice of the FCC on the new NPRM, docket 04-37, was dated 12 February 2004. That was ten days ago.

The ONLY entry on the ECFS for 04-37 is dated 19 February 2004 and it is NOT from the ARRL.

FCC 03-104 is an NOI, a Notice Of Inquiry, not a Notice of Proposed Rulemaking. 03-104 had 5,199 documents on public record as of 21 February 2004.

> Who is the "who" that you refer to as allegedly saying the ARRL
>is the ONLY entity "fighting BPL"...?!?!

You have 5,199 documents to check on the "who" and you will find several organizations and many individuals NOT allied with ARRL on 03-104.

> Just another LennieLie as far as I can see since even the ARRL's
>own website site has cited other organizations who have come out
>AGAINST the BPL proposition.

Newsflash, stasi gunnery nurse: The ARRL does NOT regulate or do much of anything else on wired data services in the USA. The FCC gets involved only insofar as radiation of RF.

There was NO, repeat NO "proposition" on BPL. 03-104 was an NOI, not an NPRM.

Docket 04-37 will concern itself with Part 15, Title 47 C.F.R. and will not take away any precious spectral playground allocations to amateurs on HF.

The ARRL has NOT yet published any text of NPRM 04-37. Neither
has the FCC as of 22 February 2004.

The ARRL has NOT yet published any sort of technical description
of any proposed BPL systems.

The FCC has put on public record several documents from the UK
and Europe on "PLC," the similar data transmission systems being
tried out there. You are free to search the FCC website or the entire
Internet to get information, including journals and trade publications
of the electronics industry for any detailed technical specifications
on PLC or BPL. [you will not find much even if you know how to
search...doubtful since you are content with being spoon-fed
information from your the beloved ARRL]

Without any technical information on proposed power levels or
exact spectral energy content thereof, everyone has been running off
at the keyboard in a surprising show of ignorant technical bigotry,
assuming the USA BPL will be like some high-powered narrowband
RF signal parked directly on amateur HF bands. You've put your
entire "electronics expertise" into a Belief System that the ARRL will
do all the work in "analyzing BPL" for you. That allows you the free
time to run around flapping your chicken wings and calling all the
non-believers (in the ARRL) for [expletive deleted] [expletive deleted].

If you look in Google you WILL find the other "whos" that I mentioned
in here, in public postings. [in addition to both short- and long-term
memory loss and inability to focus, you show symptoms of
intellectual presbyopia, a hardening of the mental eyeball]

> Just wondering, Your Putziness...WHO is the WHO to whom you
>refer...?!?!

Right now the "WHO" would be the World Health Organization,
specifically the mental health part. You are seriously lacking any
social skills in interacting with other humans, demonstrated by the
constant use of [expletive deleted] and [expletive deleted] in public
postings not to your liking.

Now take your medications and continue to study "Electricity for
Dummies" to start you on the road to a continuing interest in amateur
radio theory. With hard work and study, you can become a leader in
the amateur community from your dedication and perserverance to the
service.

At ease. Dismissed.

>And you are not. You're not a Novice. Your'e not a Tech. You're not a
>General. You're not an Advanced. You aren't a participant.

I am an electronics engineer, working for pecuniary interest, but no
longer at regular hours. I am also a hobbyist without pecuniary
compensation.

I've been involved with radio and electronics, both with and without
pecuniary interest since 1947.

I am not a ham. I have a beef with certain U.S. government laws.

You keep fishing for trolls and aren't taking your meds.

>How would you know? You aren't involved.

Right. U.S. amateur radio is a SECRET, classified service which NO
outsider can possibly know about, therefore no one can comment
unless they have an amateur license.

Right. NOBODY can become involved unless they are already involved.

Right. In order to "show interest in radio," everyone has to learn morse
code and get a ham license. It is impossible to have any "interest" in
radio through a working career in radio or electronics. The ham license
is absolutely mandatory "to show interest in radio." Right.

Right. The First Amendment of the United States Constitution states
that no citizen can comment about any amateur radio regulations unless
they already possess an amateur radio license. Right.

I am so glad you "explained" all of those things. [it's like LOTR code]

Has the ARRL approached you for more hints in generating interest in
getting "interested in radio" as you've outlined in here?

No? That's so interesting.

The Interstellar Telecommunications Union standardized all amateur licensing at 5 WPM (Words Per Month) of the de facto standard, Interstellar Zugth Code. The ARRL, totally without kidney function [they were pissed off], has refused any comment on this serious (or should I say Sirius?) rift in interstellar radio requirements. Even today there is absolutely NO mention of Zugth Code on the ARRL website.

The militaries of the galactic region adoptes SubSpace Radio with high-speed video-audio-mental data rates and gave up any thought of going back to prehistoric Zugth (or Morse) codings. Clearly, according to the Interstellar Amateur Radio Union, the militaries were not fulfilling keeping up the heroic, glorious tradition of on-off codings.

After all, Interstellar Zugth Code is the "universe language" argued the remainder of the Interstellar Telecommunications Union delegates and morse codings are based on a minority written language of a minority of the Interstellar Community. They were of the United

Opinion that those learning quaint morse codings were not showing any dedication and resolve, and especially, Interest in raddio, to the Interstellar Community.

>
> Well, Your Scumminess, you started out on a good foot, posting the
>information about the NPRM, but then you HAD to take a snide swipe at
>"someone" with the "Lone Ranger" crap.

The Public Notice of the FCC on the new NPRM, docket 04-37, was dated 12 February 2004. That was ten days ago.

The ONLY entry on the ECFS for 04-37 is dated 19 February 2004 and it is NOT from the ARRL.

FCC 03-104 is an NOI, a Notice Of Inquiry, not a Notice of Proposed Rulemaking. 03-104 had 5,199 documents on public record as of 21 February 2004.

> Who is the "who" that you refer to as allegedly saying the ARRL
>is the ONLY entity "fighting BPL"...?!?!

You have 5,199 documents to check on the "who" and you will find several organizations and many individuals NOT allied with ARRL on 03-104.

> Just another LennieLie as far as I can see since even the ARRL's
>own website site has cited other organizations who have come out
>AGAINST the BPL proposition.

Newsflash, stasi gunnery nurse: The ARRL does NOT regulate or do much of anything else on wired data services in the USA. The FCC gets involved only insofar as radiation of RF.

There was NO, repeat NO "proposition" on BPL. 03-104 was an NOI, not an NPRM.

Docket 04-37 will concern itself with Part 15, Title 47 C.F.R. and will not take away any precious spectral playground allocations to amateurs on HF.

The ARRL has NOT yet published any text of NPRM 04-37. Neither
has the FCC as of 22 February 2004.

The ARRL has NOT yet published any sort of technical description
of any proposed BPL systems.

The FCC has put on public record several documents from the UK
and Europe on "PLC," the similar data transmission systems being
tried out there. You are free to search the FCC website or the entire
Internet to get information, including journals and trade publications
of the electronics industry for any detailed technical specifications
on PLC or BPL. [you will not find much even if you know how to
search...doubtful since you are content with being spoon-fed
information from your the beloved ARRL]

Without any technical information on proposed power levels or
exact spectral energy content thereof, everyone has been running off
at the keyboard in a surprising show of ignorant technical bigotry,
assuming the USA BPL will be like some high-powered narrowband
RF signal parked directly on amateur HF bands. You've put your
entire "electronics expertise" into a Belief System that the ARRL will
do all the work in "analyzing BPL" for you. That allows you the free
time to run around flapping your chicken wings and calling all the
non-believers (in the ARRL) for [expletive deleted] [expletive deleted].

If you look in Google you WILL find the other "whos" that I mentioned
in here, in public postings. [in addition to both short- and long-term
memory loss and inability to focus, you show symptoms of
intellectual presbyopia, a hardening of the mental eyeball]

> Just wondering, Your Putziness...WHO is the WHO to whom you
>refer...?!?!

Right now the "WHO" would be the World Health Organization,
specifically the mental health part. You are seriously lacking any
social skills in interacting with other humans, demonstrated by the
constant use of [expletive deleted] and [expletive deleted] in public
postings not to your liking.

Now take your medications and continue to study "Electricity for
Dummies" to start you on the road to a continuing interest in amateur
radio theory. With hard work and study, you can become a leader in
the amateur community from your dedication and perserverance to the
service.

At ease. Dismissed.

>General. You're not an Advanced. You aren't a participant.

I am an electronics engineer, working for pecuniary interest, but no
longer at regular hours. I am also a hobbyist without pecuniary
compensation.

I've been involved with radio and electronics, both with and without
pecuniary interest since 1947.

I am not a ham. I have a beef with certain U.S. government laws.

You keep fishing for trolls and aren't taking your meds.

>How would you know? You aren't involved.

Right. U.S. amateur radio is a SECRET, classified service which NO
outsider can possibly know about, therefore no one can comment
unless they have an amateur license.

Right. NOBODY can become involved unless they are already involved.

Right. In order to "show interest in radio," everyone has to learn morse
code and get a ham license. It is impossible to have any "interest" in
radio through a working career in radio or electronics. The ham license
is absolutely mandatory "to show interest in radio." Right.

Right. The First Amendment of the United States Constitution states
that no citizen can comment about any amateur radio regulations unless
they already possess an amateur radio license. Right.

I am so glad you "explained" all of those things. [it's like LOTR code]

Has the ARRL approached you for more hints in generating interest in
getting "interested in radio" as you've outlined in here?

No? That's so interesting.

Right. There you go back into your professional background. That isn't
amateur radio. Lots of us are hobbyists in any number of fields.
You're some kind of hobbyist. You aren't a radio amateur.

> I've been involved with radio and electronics, both with and without
> pecuniary interest since 1947.

Bully for you. You haven't been involved in amateur radio at all.

> I am not a ham. I have a beef with certain U.S. government laws.

...and I'm certain that the FCC and all of hamdom are just sick over
that.
I guess you really showed us, huh?

> You keep fishing for trolls and aren't taking your meds.

I keep fishing and I keep getting bites. You, after all, seem to be the
"Big Fish".

> > > Shrug. Not good for the amateur image to make others be like you.

> >How would you know? You aren't involved.

I returned your snipped line to its rightful place. We wouldn't want
you to mislead others now, would we?

> Right. U.S. amateur radio is a SECRET, classified service which NO
> outsider can possibly know about, therefore no one can comment
> unless they have an amateur license.

You can read up on it in "Now You're Talking".

> Right. NOBODY can become involved unless they are already involved.

Wrong. NOBODY can become unvolved until they take steps to do so.
You can read up on astronomy. That alone does not make you an
astronomer.
You can peruse magazines and books on auto repair. Those things alone
do not make you a car mechanic.

> Right. In order to "show interest in radio," everyone has to learn morse
> code and get a ham license.

Wrong. You've been corrected on this same mis-statement of yours on a
number of occasions. It is "interest in AMATEUR radio", Leonard.
Neither your decades-long "interest" nor your "Extra right out of the
box" boast of several years ago have resulted in your having taken a
single step toward obtaining even the most basic level of amateur radio
license.

> It is impossible to have any "interest" in
> radio through a working career in radio or electronics. The ham license
> is absolutely mandatory "to show interest in radio." Right.

Wrong. See my comments above.

> Right. The First Amendment of the United States Constitution states

You've commented. End of involvement.

> I am so glad you "explained" all of those things. [it's like LOTR code]
>
> Has the ARRL approached you for more hints in generating interest in
> getting "interested in radio" as you've outlined in here?

A number of them did merit explanation after you attempted to twist them
into something else. It is "interested in AMATEUR radio". Why do you
persist in deleting that very important word?

> No? That's so interesting.

You've misdefined your interest. You have interest in internet
newsgroup posting. You have interest in outlining your past
professional glories.
You aren't involved in amateur radio.

Sure Hallicrafters is as defunct as "Ham Radio" magazine. Many of us enjoy indulging in nostalgia over our radio equipment and our past in amateur radio. You'll have to actually pass some exams and obtain a license before you can have a past in amateur radio.

Remind me Jim, what do FISTS propose? Given that they are an organisation for the promotion of CW, I have trouble beleiving that they would suggest anything that is actually responsive to the removal of the international CW test requirement, but I could be wrong(?).

OTOH, I don't beleive in imposing additional requirements beyond what the
FCC says. We always allow instant retests in our group, subject only to

having enough exam papers. It doesn't help people much on the theory, but it's possible to get entirely different results in consecutive code tests. Every time I've seen someone do an instant re-test on theory they've failed again, often by a greater margin, but on code anything can happpen.

>
> Newsflash, stasi gunnery nurse: The ARRL does NOT regulate or
> do much of anything else on wired data services in the USA. The
> FCC gets involved only insofar as radiation of RF.

No one said they are, Lennie.

You were asked WHO said the ARRL is allegedly the "lone ranger"
arguing against BPL.

You have FAILED to directly answer the question...again.

> You've put your
> entire "electronics expertise" into a Belief System that the ARRL will
> do all the work in "analyzing BPL" for you. That allows you the free
> time to run around flapping your chicken wings and calling all the
> non-believers (in the ARRL) for [expletive deleted] [expletive deleted].

Not so, Your Dog Fellatingness...

I ASKED YOU TO SPECICIFY WHO SAID THE ARRL IS THE "LONE RANGER"
IN ANTI-BPL DISCOURSE.

You, once again, launched into yet another verbose rambling
soleley designed to cover your NON-answer.

> If you look in Google you WILL find the other "whos" that I mentioned
> in here, in public postings. [in addition to both short- and long-term
> memory loss and inability to focus, you show symptoms of
> intellectual presbyopia, a hardening of the mental eyeball]

You HAVE NOT mentionsed ANY "whos".

You have alleged that the ARRL is positioning itself as the only entity that is against this, and the FACTS are that there are numerous other entities against it, and the ARRL itself has acknowledged the position of those other entities.

> > Just wondering, Your Putziness...WHO is the WHO to whom you
> >refer...?!?!
>
> Right now the "WHO" would be the World Health Organization,
> specifically the mental health part. You are seriously lacking any
> social skills in interacting with other humans, demonstrated by the

> postings not to your liking.

Lying and misrepresentation of the facts are not to my liking, Your Lyingness, hence my insatiable desire to continue to poke holes in your rants.

You DO make it easy to do.

> Now take your medications and continue to study "Electricity for
> Dummies" to start you on the road to a continuing interest in amateur
> radio theory. With hard work and study, you can become a leader in
> the amateur community from your dedication and perserverance to the
> service.

Sorry Lennie..I'm already licensed...But I have a copy of "Tune in the World" and "Now You're Talking" from classes I've taught that I'd be glad to loan you so YOU can get a license...(Please say no...I'd hate to have a scumbag like you in Amateur Radio...)

> At ease.

Always.

>Dismissed.

Not by you, I'm not.

Steve, K4YZ

> 73 de Jim, N2EY

Here's AG4RQ's response to my questions:

K2UNK Question: What does dropping code testing for General
or Extra do that is then "guaranteed to become a
very expensive enforcement nightmare."?

AQ5RQ Reply: Bill, the enforcememt nightmare would come
from instantly granting a quarter of a million or more
Techs HF privileges. We have intentional QRM on
the bands already. Add a quarter of a million Techs
to the bands, along with the resentment over this
whole code/no-code issue. What do you think will
happen?

K2UNK Question: Does RAF believe that if a General
or Advanced (K2UNK, mental goof, meant to say Extra)
doesn't pass a code test that he/she wouldn't be
allowed by the FCC to operate morse?

AG4RQ Reply: Under the RAF proposal, the only Generals
and Extras (You said Advanced. I think you meant
Extra) would be those who passed a code test. We
want to keep licensing requirements for General and
Extra as is, with a 5 wpm code test.

Clearly section 21 is anything BUT clear as to what RAF
believes...IMHO.

Cheers,
Bill K2UNK

You MIGHT have been an electronics technician at some point in
time. At present, no contribution of any import can be attributed to
Leonard H. Anderson at ANY level. Several articles in "Ham Radio"
magazine carry your by-line but cannot be verified as "original"
work..At best you were able to successfully plagerize anothers work by
careful re-editing. The one personal reference I could contact at a
place you alleged to "work" was of passive participation, at best.

> I've been involved with radio and electronics, both with and without
> pecuniary interest since 1947.

But not AMATEUR RADIO, the central subject of this forum. In
THIS matter you have zero-point-squat experience.

The physics of radio are irrelevent here...It's the application.

> I am not a ham. I have a beef with certain U.S. government laws.

You ARE a liar and an antagonist. These are documented.

> You keep fishing for trolls and aren't taking your meds.

Seems he caught one. Want him to throw you back when you're all
grown up?

> >How would you know? You aren't involved.
>

I'm reminded of TAFKA Rev Jim's declaration that a Morse Code Exam is
a disincentive to the use of CW on HF, after a decade of denial that
the exam is any impediment at all.

Bill, your question reminds me of a scenario painted by Steve, to
which TAFKA Rev Jim responded below. It is very enlightening to see
that after a decade of saying that the Morse Code Exam was no barrier
at all to the Amateur Service, he pipes in with a new theory - that a
Morse Exam is a disincentive to the use of CW on HF.

Thought you might enjoy the flip-flop.

Now, THERE is what I call a persuasive argument -- NOT!!! Of course, as no-coder arguments usually go, it is one of the more logical. Kind of reminds me of the "Democratic" Party, who have, as their principle motive for winning the 2004 Presidential Election, the visceral hatred of President Bush just because he is conducting himself as a true patriot in his efforts to secure our country from the threat of terrorism. Not a single one of the '04 Democratic Presidential candidates (with the possible exception of Sen. Joe Lieberman, who is now out of the race) has or had any vision for his administration more original than raising Federal taxes, expanding Federal government social programs, and subordinating our national sovreignty to the United Nations in matters of International security policy. All of which confirms my long-held opinion that no-coders are mainly liberal, socialist, Communist sympathizers who hate America and want to weaken us by reducing all standards in our society, thus making us just another Third World nation. How charming.

Lennyboy is in denial, the Office of Homeland Security and FEMA are just
two of many other entities that are in the fight against BPL.
Lennyboy can't stand it because all us hams have a license that
authorizes us to transmit on certain frequencies and he can't pass the test.

>
>Right. There you go back into your professional background.

I've been working on that professional background for 51 years. :-)

>That isn't amateur radio.

That isn't HAM radio, sweetums. "Amateur" is defined as "without
pecuniary interest." Even the FCC defines amateur radio that way.

>Lots of us are hobbyists in any number of fields.

You are out standing in your field now.

>You're some kind of hobbyist. You aren't a radio amateur.

Poor baby. Still so confused, scrunching up his fat little fingers,
bound and determined to Have His Way! :-)

Hobbyists in radio are defineable as amateurs in radio if they do not
make any income from it.

LICENSES in amateur radio are required to transmit RF on allocated
amateur radio bands in order to be legal with the federal government.

Poor baby, doesn't understand that amateur radio licenses are NO
GOOD outside of allocated amateur bands. That's true. Anyone can
verify that with Title 47 Code of Federal Regulations, especially in
Parts 1 and 2..

Did you know that the federal government can operate all kinds of RF emitters without having ANY operators licensed? True. A ham license there isn't worth the price of a ham sandwich. No criminal liability!

Don't you just HATE it when your rant gets destroyed?

>> I've been involved with radio and electronics, both with and without
>> pecuniary interest since 1947.
>
>Bully for you. You haven't been involved in amateur radio at all.

:-) I haven't been involved in LICENSED amateur radio.

Too bad I can't bring up Jim Fisk as a reference (he is SK). I don't know about Alf Wilson, W6NIF, or Rich Rosen. They were rather involved with HAM RADIO. :-)

>I guess you really showed us, huh?

That's not difficult. :-)

>I returned your snipped line to its rightful place. We wouldn't want
>you to mislead others now, would we?

Anyone can read these public postings without your selective editing. :-)

You don't seem to comprehend half of it, but that's quite another problem and all yours.

>> Right. U.S. amateur radio is a SECRET, classified service which NO
>> outsider can possibly know about, therefore no one can comment
>> unless they have an amateur license.
>
>You can read up on it in "Now You're Talking".

Morsemanship isn't "talking." It's beeping.

>> Right. NOBODY can become involved unless they are already involved.
>
>Wrong. NOBODY can become unvolved until they take steps to do so.
>You can read up on astronomy. That alone does not make you an
>astronomer.

Oh? Astronomers need to be "licensed" and take a morse test?

I don't think so. But, if your false statement makes you happy, why should I upset your nirvana?

[you might research "astronomy" and who spots what, but that would make you see stars...]

>You can peruse magazines and books on auto repair. Those things alone
>do not make you a car mechanic.

BWAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!!!

Riiiiight. I guess Kragen and all those auto parts stores are doomed
for lack of sales, right? :-)

>> Right. In order to "show interest in radio," everyone has to learn morse
>> code and get a ham license.
>
>Wrong. You've been corrected on this same mis-statement of yours on a
>number of occasions. It is "interest in AMATEUR radio", Leonard.

Noooo, noooo. You are desperately trying to hang on but are
inexorably drawn over the edge. It's a very long drop below you...

LICENSED amateur radio is what you are trying (vainly) to say and then
only to be legal with the federal government on transmitting RF energy
WITHIN allocated amateur radio bands. As the FCC explains, an
amateur radio license is NOT required for transmitting RF energy outside
of amateur radio bands. That sort of thing is quite illegal. :-).

That's only for CIVILIAN radio services and the FCC has NO jurisdiction
over government users of radio.

But, did you know that UNLICENSED civilians can use certain allocated
radio bands and transmit RF energy without taking a single test? True!
Been several of those since 1958! Ask the FCC about non-amateur
radio services if you are too "involved" in amateur radio activity to go
look it up. :-)

>Neither your decades-long "interest" nor your "Extra right out of the
>box" boast of several years ago have resulted in your having taken a
>single step toward obtaining even the most basic level of amateur radio
>license.

Poor baby. Still angry over the past?

You STILL can't understand why I am here. I've explained it enough
times, but your have this set-in-concrete mind that can't get flexible
enough to understand. Tsk, tsk, tsk.

If you are still munching cashews from your glorious middle Africa
"Foreign Service" days, I'd throw them out...either than or too much
beeping has affected your mind. [Guinea-Bisseau is the African
center for cashew exporting...about their best export...]

>> Right. The First Amendment of the United States Constitution states
>> that no citizen can comment about any amateur radio regulations unless
>> they already possess an amateur radio license. Right.
>
>You've commented. End of involvement.

Not even close to the "end."

"Comments" are NOT "involvement" even in your distorted little Middle
Earth view, Frodo. [you aren't Golem, but the resemblance is there]

>A number of them did merit explanation after you attempted to twist them
>into something else. It is "interested in AMATEUR radio". Why do you
>persist in deleting that very important word?

Sigh..."amateur" refers to an activity without pecuniary interest. The
FCC uses those same words. [the FCC granted your amateur radio
license]

The word "amateur" (with or without all-capitals) does not explicitly
say TRANSMISSION OF RF ENERGY IN ALLOCATED AMATEUR
RADIO BANDS. Your prized amateur radio license is NO GOOD for
legal transmission of RF energy OUTSIDE of allocated amateur bands.

In fact, in some U.S. civilian radio services it is perfectly legal to
transmit RF energy WITHOUT a license of any kind!!! Sunovagun!

Poor baby. Another Heilian rant shot down in flames.

>You've misdefined your interest.

Not me. YOU. All wrong, Golem...er, I mean Frodo.

I HAVE defined my "interest" quite correctly.

That you totally refuse to believe it is not my problem. Yours.

Your intellectual presbyopia is glaringly obvious.

>You have interest in internet newsgroup posting.

No more so than regular physical exercise. :-)

I have lots of interest in my bank. I have monetary interest elsewhere.

>You have interest in outlining your past professional glories.

Tsk, tsk, tsk, very subjective use of adjectives on your part.

I've spent 51 years in professional radio-electronics activity and none
of it can qualify as "glorious." Intellectually INTERESTING, yes, and
some of it quite enjoyable. If some of it was more involved than what
you did, TS, that's the breaks of life.

Maybe your distemper is flaring up again because I got assigned to
a very large HF transmitting facility while in the U.S. Army...and got
rank and responsibility operating many high-powered HF transmitters.
51 years ago. Before your first hamme raddio license. TS for you.

>You aren't involved in amateur radio.

Not involved in TRANSMITTING RF ENERGY ON ALLOCATED HAM
BANDS, true. :-)

TRANSMIT, Baggins, TRANSMIT. Like in legal RF energy within
those tight, confining HF band bounds.

I'm just advocating the elimination of morse code testing for any radio license but you desperately want to make that some kind of grande production of drama and pathos, a giant mountain built out of a mole hill of your old morse message blanks. Tsk, tsk, tsk, you try such theatrics! Do you have an interest in the theater? :-)

I'll just put you down in the same emotional category as other emotionally-seven-year-old Extras.

Those are very "involved" as long as their attention spans last... :-)

HAR! YOU are the one diagnosed with it... :-)

Presbyopia: A common condition in humans around 40 and older
where the eyeball becomes less flexible, thus requiring bifocal or
trifocal lens correction for wide-range optical focussing.

Intellectual presbyopia: A common condition among olde-tyme
hammes of the morse persuasion whose mind has become
inflexible and incapable of understanding communications they
are not familiar with or not explained by the League in some
publication such as "Talking for Dummies."

>I'm awfully sorry.

True enough. [surprising self-depreciatory admission!]

>I should have realized that there was something behind these
>seemingly senseless outbursts of yours.

Yes, those "outbursts" are down in the noise level of independent
thought. You don't have much of that.

>I did you a favor and re-inserted the part you snipped.

Why? Did your letter-tracing-finger run down to the bottom of the monitor again?

>If you look at the whole thing,
>perhaps it'll become clear to you how you made your error.

My only "error" is considering that olde-tyme hammes of the morse persuasion MIGHT try to be civil or at least accept the fate of morse testing defeat with some grace. In that regard I was absolutely wrong and admit it freely. :-)

Was there anything else, then?

> violating "freedom of religion"). (snip)

I disagree. Freedom of religion (or, more specificially, "the free exercise thereof" - the actual words of the Constitution) would not make the words "under God" unconstitutional. Instead, such a ruling would place limits on the free exercise of religion and on freedom of speech. The First Amendment says:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof..."

Notice there are not just words about the "establishment of religion," but also words about the free exercise of religion. Those opposed to religion love to point to the "establishment" clause while carefully ignoring the "free exercise" clause. However, they do so at the detriment of our Rights.

The words "under God" do not establish a religion. Since many religions believe in a God, no religion is established. Specific government recognition of religions which don't believe in a God, while placing "speech" limits on religions which do, would violate the "establishment" clause in the first case and the "free exercise" clause in the second. Government enforced removal of all mention of religion would also violate the "free exercise" clause (and the "free speech" clause).

The Constitution should never be used to ban any mention of religion in this country or this government - not if the "free exercise" clause is truly respected.

I'm glad to see I'm not the only one who thinks Arianna Huffington just flew in from some other planet. Suze Orman is another of my "favorites" - I suspect she still is on another planet.

> The Interstellar Telecommunications Union
> standardized all amateur licensing at 5 WPM

> Interstellar Zugth Code. (snip)

To be fair, we should point out that the words in some of those off-world languages are fairly long. As such, it does take time to send them using any operating mode. That's one reason they dropped the ID requirements - some couldn't finish a word before they had to ID again. I'm still listening to a guy that started talking about four years ago. I don't know which planet he is from - he hasn't got that far yet. Whatever the case, I'm darn sure glad it's not a CW contact.

Thanks for that fine recount of those events. We all benefit from repeated looks at the past.

[or, on a more serious note, to write all of that, you have too much time on your hands] ;-)

>from instantly granting a quarter of a million or more
>Techs HF privileges.

Quarter million? More like 322,000, since the ARRL-proposed free upgrade would
go to all Techs and Tech Pluses.

OTOH there's no indication of how many would actually use the new privileges.

>We have intentional QRM on
>the bands already.

Haven't heard any on CW, myself...

>Add a quarter of a million Techs
>to the bands, along with the resentment over this
>whole code/no-code issue. What do you think will
>happen?

How will anyone know who is who just from a callsign? There's sure to be some
resentment no matter what.

Some fun facts:

If either the ARRL or FAR proposals are enacted, about 322,000 Techs and Pluses
will have more HF/MF. Not just 'phone but CW and data. The ARRL proposal
spreads them out over most of nine bands while the FAR proposal concentrates
all 322,000 into half of 160, small slivers of 80 and 40, and a bit more of 10
and 15. And no 'phone on the bands between 2 and 25 MHz.

Which proposal do you think will maximize crowding and resentment?

Comparisons to the old Novice are not valid because there were far fewer than
322,000. It's clear that one reason ARRL proposed the upgrade to General was to
avoid crowding.

>K2UNK Question: Does RAF believe that if a General
>or Advanced (K2UNK, mental goof, meant to say Extra)

>and Extras (You said Advanced. I think you meant
>Extra) would be those who passed a code test. We
>want to keep licensing requirements for General and
>Extra as is, with a 5 wpm code test.
>----------------

He didn't understand the question?

It's clear from the proposal that all license classes would be allowed to use Morse. Not an issue.

>Clearly section 21 is anything BUT clear as to what RAF
>believes...IMHO.
>
I think it's pretty clear. The FAR/RAF? proposal was written as a reaction to the ARRL proposal, and is similar in some ways but offers drastically less HF/MF (space and bands) to hams who haven't passed a code test.

The big question, then, comes down to this:

If it is accepted that Element 1 will be removed for at least some classes of licenses with HF privs, (note that "if", folks!) is it preferable to:

A) limit them to small parts of a few bands that are relatively unpopular, particularly during sunspot minima years

or

B) allow them significant access to all HF/MF bands?

Personally, I don't think the 5 wpm code test is a real "barrier" to anyone, given the wide range of accomodations now in place and the training methods now available. But if it's going to be dropped for some license classes, it seems to me that B makes more sense than A.

IOW, ARRL would spread the free upgradees out and give them a smorgasboard of options, FAR would concentrate them and give them a restricted diet.

Which do you think makes more sense?

Depends, Bill. If they've offered instant retests before it will be
hard to jerk them back. I'm going to guess that most of the VE's have
offered instant restests.

"I am only here to civilly debate the Morse Code test
issue"...From yet another LennieLie perpetrated in this forum by
Leonard H. Anderson.

> Hobbyists in radio are defineable as amateurs in radio if they do not
> make any income from it.

Yet the FCC defines RADIO AMATEURS as being licensed in the
Amateur Radio Service.

Scumbag spinmasters such as yourself can spin it any way you
want...You're STILL not a Radio Amateur BY THE FCC'S DEFINITION.

> Poor baby, doesn't understand that amateur radio licenses are NO
> GOOD outside of allocated amateur bands. That's true. Anyone can
> verify that with Title 47 Code of Federal Regulations, especially in
> Parts 1 and 2..

Not germane to the FACT that YOU do not have ANY OPERATOR or
STATION license combintation that will allow you to operate a radio
station in the AMATUER RADIO SERVICE...Nor in any other service, save
for Part 15 and Part 95.

> Did you know that the federal government can operate all kinds of RF
> emitters without having ANY operators licensed? True. A ham license
> there isn't worth the price of a ham sandwich. No criminal liability!

Not germane to the FACT that YOU do not have ANY OPERATOR or
STATION license combintation that will allow you to operate a radio
station in the AMATUER RADIO SERVICE...Nor in any other service, save
for Part 15 and Part 95.

> Don't you just HATE it when your rant gets destroyed?

I am sure he would if he were ranting or if anything he'd said
were untrue.

YOU are free to believe otherwise, but YOU are the one ranting,
and YOU are the one who DOES NOT MEET THE CRITERIA as a LICENSED
OPERATOR in ANY radio service, Lennie.

Your GROL allows you NO priviledges WITHOUT a station license.

Your GROL >>ONLY<< allows you to "operate" under the auspices of
someone else's station license, and ONLY to the DISCREET channel(s)
and THE mode specified by THAT licnese.

> >> I've been involved with radio and electronics, both with and without
> >> pecuniary interest since 1947.
> >
> >Bully for you. You haven't been involved in amateur radio at all.
>
> I haven't been involved in LICENSED amateur radio.

As of today you've NOT been involved in AMATEUR RADIO. You are
not a licensee. You've had some articles published in an long-defunct
magazine, but you have yet to prove to anyone that your "work" was
original

> Too bad I can't bring up Jim Fisk as a reference (he is SK). I don't
> know about Alf Wilson, W6NIF, or Rich Rosen. They were rather
> involved with HAM RADIO.

Judging by thier callsigns, they are licensed AMATEUR RADIO
OPERATORS, as defined by the FEDERAL COMMUNICATIONS COMMISSION...

You >>DO<< remember them, don't you, Sir Scumbag? THEY are the
UNLICENSED politicians that YOU constantly remind us that are IN
CHARGE...

THEY are the one's who define what AMATEUR RADIO is...NOT an
unlicensed, ex-radio technician retiree in Southern Kalifornia.

> >I guess you really showed us, huh?
>
> That's not difficult.

So far for YOU, it is...You've not showed us anything but
your...well...your butt...

Guess you need to get those "Depends" taped up a bit higher,
Lennie.

> >I returned your snipped line to its rightful place. We wouldn't want
> >you to mislead others now, would we?
>
> Anyone can read these public postings without your selective
> editing.

A Pearl of Wisdom from the master of the "selectiv(ly) edit(ed)"
rant.

> You don't seem to comprehend half of it, but that's quite another
> problem and all yours.

Comprehend THIS, Scumbag:

Not germane to the FACT that YOU do not have ANY OPERATOR or
STATION license combintation that will allow you to operate a radio

station in the AMATUER RADIO SERVICE...Nor in any other service, save
for Part 15 and Part 95.

> >> Right. U.S. amateur radio is a SECRET, classified service which NO

"I am only here to civilly debate the Morse Code test issue"...

Yes, Lennie...we know why you are "here"...We've added THAT lie
in with the REST of the ones you've promulgated in this forum.

> If you are still munching cashews from your glorious middle Africa
> "Foreign Service" days, I'd throw them out...either than or too much
> beeping has affected your mind. [Guinea-Bisseau is the African
> center for cashew exporting...about their best export...]

"I am only here to civilly debate the Morse Code test issue"...

As I said...

> >A number of them did merit explanation after you attempted to twist them
> >into something else. It is "interested in AMATEUR radio". Why do you
> >persist in deleting that very important word?
>
> Sigh..."amateur" refers to an activity without pecuniary interest. The
> FCC uses those same words. [the FCC granted your amateur radio
> license]

BIGGER SIGH....The very same FCC Commissioners that YOU
constantly refer to are the ones who have made the definition,
Scumbag.

In the context of FCC rules and regulations, "Amateur" is a
person LICENSED in the AMATUER RADIO SERVICE...

A status YOU do not presently hold...Thank God.

> In fact, in some U.S. civilian radio services it is perfectly legal to
> transmit RF energy WITHOUT a license of any kind!!! Sunovagun!

Ohhhhhhhhh, baby!

Part 15 and Part 95....

I am soooooooooooo impressed! About enough "RF energy" to be
heard across town if the conditions are right with the technical
limitations imposed by PArt 15, and door-to-door trash that makes it
almost impossible to be heard across town even if the conditions ARE
right on Part 95.

> Poor baby. Another Heilian rant shot down in flames.

Not hardly.

Since you try to change the >>FCC'S<< definition of what Amateurs
are, and since YOU are NOT an FCC Commissioner and not entitled to

that priviledge, I'd say the "rant" was yours and the one going down
in flames is you...Again...

> >You've misdefined your interest.
>
> Not me. YOU. All wrong, Golem...er, I mean Frodo.

"I am only here to civilly debate the Morse Code test
issue"...Leonard H. Anderson

> I HAVE defined my "interest" quite correctly.

Not by FCC definitions, Lennie...Only by your own. In the eyes
of the FCC, you are just a private citizen.., a "hobbyist",
perhaps...An "amateur" in many different ways, but in THIER
deifintion, you are NOT an "Amateur".

> That you totally refuse to believe it is not my problem. Yours.

The YOU "totally refuse" to accept that your attempts to rewrite
federal definitions to YOUR satisfaction is laughable....That you do
it in public and in such a way as to totally humiliate yourself and
family name is incredulous.

> Your intellectual presbyopia is glaringly obvious.

YOUR lack of ANY intellectual contributions to Amateur Radio are
even more glaring.

> >You have interest in internet newsgroup posting.
>
> No more so than regular physical exercise.

I still offer to take you around the block a few times, Your
Putziness...To make it more interesting, I'll carry my field pack with
me (around 40 pounds).

> I have lots of interest in my bank. I have monetary interest elsewhere.
>
> >You have interest in outlining your past professional glories.
>
> Tsk, tsk, tsk, very subjective use of adjectives on your part.

WHOOHOO! Such an allegation coming from the master of the
Newsgroup Obfuscation!

> I've spent 51 years in professional radio-electronics activity and none
> of it can qualify as "glorious."

No doubt...how "glorius" can it be to follow in someone elses
footsteps step-by-step...?!?!

> Intellectually INTERESTING, yes, and
> some of it quite enjoyable. If some of it was more involved than what
> you did, TS, that's the breaks of life.

How "involved" can a copycat be, Lennie...?!?!

> Maybe your distemper is flaring up again because I got assigned to
> a very large HF transmitting facility while in the U.S. Army...and got
> rank and responsibility operating many high-powered HF transmitters.
> 51 years ago. Before your first hamme raddio license. TS for you.

Again with the relapsing to profanity (or at least the
insinuation of profanity) in order to "make a point"...

Your "assignment" as a radio clerk in 1950's Japan is about as
"glorious" as your life ever got, I am sure, hence your blatherings
and antagonism in THIS forum...

Poor Lennie...Still unable to bring himself off his marble
pillar long enough to join mere mortals and take an Amateur Radio exam
and join in with the rest of us...enjoying Amatuer Radio and all that
it entails...

> >You aren't involved in amateur radio.
>
> Not involved in TRANSMITTING RF ENERGY ON ALLOCATED HAM
> BANDS, true.

Thee are no "HAM BANDS" in the United States, Lennie...However
the Federal Communications Commission >>DOES<< specify the allocation
of numerous bands from the MF spectrum through microwaves to the
AMATEUR RADIO SERVICE.

47CFR refers, if you need help...

> TRANSMIT, Baggins, TRANSMIT. Like in legal RF energy within
> those tight, confining HF band bounds.

Ignorance, Lennie....97% of all Amateur Radio allocations are
ABOVE 30Mhz...Spectrum YOU could be using by the end of the week if
wanted to...

> I'm just advocating the elimination of morse code testing for any radio
> license but you desperately want to make that some kind of grande
> production of drama and pathos, a giant mountain built out of a mole

Some good points Dwight. The "under God" part, which was added in the
early 1950's bears inspection though. What was the intent of those who
added this part? Is there a reason that they chose the word "God"

instead of "Vishnu" or (take your pick)?

And there is the crux of the matter. I would hazard a guess that the same people that find the removal of the words "Under God" a bad thing, would bne equally as distressed if they had to say "Under Vishnu" in their place.

Spare me the lectures willya??! I'm about ten feet from one, they're
everywhere and I don't need a tour of Microcenter to "find out what
they are". And yes it does need a wire, in this case a cable TV
connection to the modems/routers/hub. Is this the "Wi-Fi 802 dot
something" which is being hyped? I don't think so.

> in your lapper and surf anywhere.

Wrong. Surf around as long as you're in Starbucks, in an airport
terminal, in a Hilton and maybe you'll find a connection. Now drive a
few miles to the Wharton Tract or even to Ridley Creek State Park and
try to get a connect yer lapper-with-an-antenna.

And if "they" can't find a "solution" then kiss the 2.4 Ghz (got it
right that time) ham band 'bye-'bye. Get comfortable with the concept

> >> And Ralph Nader is going to run again. GEts worse every day.

At this point I'm not in the least bit convinced that Gore would have
been one bit worse that the Shrub. Democrats are the free-spenders and
the Rebublicans are the fiscally conservative right? Have you checked
the size of the national debt recently?

Alun <elektros@yahoo.com> wrote in message
news:<Xns9497BCEF5AA3Aelektrosmdonet@130.133.1.4>...

> Remind me Jim, what do FISTS propose?

You can read the entire FISTS proposal at:

http://www.fists.org/FIST_FCC_Petition_8-30-303.pdf

It can be summed up in six major points:

1) Techs get Tech Plus HF privileges without a code test (which
effectively merges the two license classes)

2) Techs allowed all digital modes on HF.

3) Extra code test made 12 wpm

4) No retesting at the same VE session

5) Improved written exams (see petition for details)

6) All the rest of the existing rules stay as-is (no free upgrades,
Tech remains entry-level exam, etc.)

The FAR/RAF proposal was obviously written in response to the ARRL
one, and the two of them are much more alike than they are to the
FISTS proposal.

> Given that they are an organisation
> for the promotion of CW, I have trouble beleiving that they would suggest
> anything that is actually responsive to the removal of the international CW
> test requirement, but I could be wrong(?).

Note that under the FISTS proposal Techs would not have to take a code
test to get Novice/Tech Plus HF.

Note also that the vast majority of individuals commenting supported
this
proposal, and that agreement among FISTS members was in excess of 98%.

Will FCC enact all of it? Maybe not, but if you don't ask you never
get.

They would have had to successfully flown solo several times before
getting a license.

Pisser-offer to end all.

But would it be any worse than the days when the first consumer TV
receivers hit the shelves and hams "invented" TVI? How long ago?? It's
all circles.

> These ARE standards. Just different applications.

Depends on what/how/who defines a "standard". Touch-tone pads are
standard. The rest are questionable on that scale, and in the case of
the instant topic very questionable. I spend a good bit of time
cruising the financial news, London Financial Times, Reuters, Business
Week, anywhere where I don't have to cough up coin to get into like
the WSJ. The technologies which will matter down the road are those
Wall Street buys into. The rest will be orphaned. Good collection of
articles by the investments pundits on the likes of Wi-Fi and the
related standards problems they see in this field.

http://www.businessweek.com/technology/tc_special/tc_04wifi.htm

Speaking of orphans . . I have yet to run into a single peep about BPL
anywhere in the tech investments rags so far. I think this silently
speaks volumes about the future of BPL.

>
> Agree again.

Not just rewritten but recertified by FCC. Don't hold yer breath!

I'm all for secret tests and a 30 day wait. But such things are simply
not in the cards for the foreseeable future. The stuff FISTS wants has

a better chance!

Heck, the reason we have 10 year licenses is to save FCC admin work.
> > > >and

Why are you surprised? Those issues were debated here years ago and
the
same conclusions reached.

It would be neat to see if the FAR folks would volunteer to run a VE
session cross-check clearinghouse at their own expense to enforce the
10 day rule. Or to take on rewriting all of the question pools.

> > Cheers and see my post on "section 21". I'm interested
> > in your opinion of what the petitioners are suggesting.

I think I answered that one. Remind me if I didn't.

It sure looks to me like the FARRAF thing was written in response to
the ARRL proposal.

That's enough reason NOT to mess with 10 Meters. LOL!

They got another company up in Maine AND wrote a letter to FedEx as well.

I know it's a troll, but it is still a good answer. <<snicker>>

J

Mr. Carl Leonard Ross
CLR Transport
1310 Ozone Drive
Saluda, NC 28773

SUBJECT: Warning Notice--Unlicensed Radio Operation

Dear Mr. Ross:

Information before the Commission indicates that your vehicle, US DOT #
11131374, bearing NC license LP-2598, on Interstate 85 between Gastonia and
Kings Mountain, NC, was the source of unlicensed radio transmissions on the
Ten Meter Amateur Radio band on July 14, 2003.

Please be advised that operation of radio transmitting equipment without a
license is a violation of Section 301 of the Communications Act of 1934, as
amended, 47 U.S.C. Section 301, and will subject the operator to fine or
imprisonment, as well as an in rem seizure of any non-certified radio
transmitting equipment, in cooperation with the United States Attorney for
your jurisdiction. Monetary forfeitures normally range from $7,500 to
$10,000.

You are requested to contact me at 717-338-2502 to discuss this matter.

That's OK...I didn't really expect Lennie to stand up and answer.
He lacks the male applicances and testosterone levels to operate it
anyway.

Like I said...His silence was his answer, and his reference (once
again_ to the (defunct) East German secret police is typical.

Seems Lennie has an afinity for "defunct" things...Now we (yes,
the "royal" we...) know what ELSE is defunct!

> don't
> try to beat the other guy at his game, you get him to play your game.

Pretty lame excuse for an excuse Micollis.

>
> How many you put in the log for 'RS?

None on my own. Turned out that more ops showed up than expected, five plus me which rendered me surplus labor. They all know the logger inside out which I don't know so I got attached to the primary run station as it's second set of ears. On 20 & 40 with the legendary W8FJ, incredible op that he is. 200/Hr rates no sweat. Name of my game was to dredge callsigns up out of the muck when he didn't. Worked but he didn't miss many. OhYeah, I got the dust knocked off my skills BIG time! Which is the bottom-line reason I tripped to Glenmoore to burrow in with this bunch. Mission accomplished. In spades.

Two-station HP category, 6,000+ q's, 11.3 meg, missed a one-weekend 5BDXCC by one lousy mult on 80. Howzatt for a shot at a "Clean Sweep" eh? The big Q bands were 40 and 15. Well over 100 mults on 10M sunspot counts be damned.

Went on after the 'test, Sig fired up on 3.830 immediately after the closing bell to find out who beat who while we gnawed on steak sammiches Mrs. Sig supplied. The Big Guns from all the clubs were on freq, looney operation, guys jumped in with CW instead of SSB . . . helluva lot of fun, all of it.

Until ya add the "transverters" for 160, 60, 30, 17, 15, 12 and 10M which the thing cannot get on now. Then comes the "modulator" and the serial port which it doesn't have either . . Yeah, Dave. We'll need plenty of cubic feet for this abomination.

And by the way Dave the dial in the thing is the rim of a plastic soup bowl. Absolute truth, so help me.

Yeah, yeah. I sold my Valiant to a ham and he went home and
immediately ran it into his 4 el. 11M quad.

Filth:

Get a life? Thanks anyway, but I've already got one. A very good life,
indeed. And one of the little things that makes it better is the ability to
fully enjoy my hobby as a radio amateur, complete with the ability to
use the Morse/CW mode. Sorry about your bad luck, OM.

>The Patriot
>
>America, Love it or leave it!
>If you're not with us, You're against us.

Sooo, my desire not to have our society plummet down the slippery slope
of non-existant standards, be they educational, moral, social, or even those
related to amateur radio licensing. Apparently, all that is perfectly OK with
you, and you call yourself a "patriot?" Remove the "pat" and you're a lot
closer to the truth!

Now, THERE is what I call a persuasive argument -- NOT!!! Of course, as no-coder arguments usually go, it is one of the more logical. Kind of reminds me of the "Democratic" Party, who have, as their principle motive for winning the 2004 Presidential Election, the visceral hatred of President Bush just because he is conducting himself as a true patriot in his efforts to secure our country from the threat of terrorism. Not a single one of the '04 Democratic Presidential candidates (with the possible exception of Sen. Joe Lieberman, who is now out of the race) has or had any vision for his administration more original than raising Federal taxes, expanding Federal government social programs, and subordinating our national sovreignty to the United Nations in matters of International security policy. All of which confirms my long-held opinion that no-coders are mainly liberal, socialist, Communist sympathizers who hate America and want to weaken us by reducing all standards in our society, thus making us just another Third World nation. How charming.

Make that "anywhere in your house or yard".

Point is that the last-mile problem isn't a real problem at all. Run the fiber down the street on the poles, put a little box every so many poles, use a little encoding, no problem.

That's what the thousand-points-of-light-family-values-read-my-lips-cloth-coat Republicans keep telling us....

>Have you checked the size of the national debt recently?

Yep. But that's not the big problem - the real 800 pound gorilla is how fast the deficit is making it grow. A few years back we had a surplus....

And now we're supposed to go back to the Moon, and send people to Mars. Yet the odds on a Shuttle failure are worse than 100 to 1...

Tell ya what, let's fund Shrub's moon-mars-madness the same way things like education, mass transit and health care get funded. We could have walkathons and bake sales. Corporate sponsorship in return for advertising space, just like they do in NASCAR and at Indy. Let groups and individuals send in money to buy parts and supplies - a gallon of rocket fuel, coupla resistors for the computer, etc.

NASA can have anything in the Southgate Radio stockroom for a very nominal price.

A lot of the wild critters which have been running away from human
civilation for years are adapting and moving back in with us. About
five years ago a mountain lion showed up around here. 'Possums and
racoons are driving the city folk nuts, etc. WRT to deer what we need
is more mountain lions, *lots* more.

Well, there were all those general lites and extra lites (I'm one) that got HF phone privs in 2000. And no nightmare happened. Oh there was the usual learning curve all newbies go thru (and a burst of newbies happened) but most everyone learned.

So I would predict that after a short learning curve period that there will be
no problem. Oh there might be a few people fumbling around with CW, but the experienced CW ops might just as soon be happy that new people are interested in the mode. Prehaps some bandwidth in the old novice subbands could be dedicated to training new operators via gentlemen's agreements. Or older ops who haven't touched a key in 20 years.

Again, note that 14.313 was rampant before restructuring.

Lots of extras kept their original callsigns. Though I don't think that
there are any
WN#*** calls that are not vanity calls around anymore. But I kept my
call that
I was assigned as a Tech (5wpm and general written) back in 1976. And I had
to take a sending test back then at the FCC field office. So I would
look like
a no code HFer if this thing goes thru. Not worried about it.

Hi, Larry,

please insert [US-American] in the space indicated above.

Your post reads like a Clown - sketch at Barnum & Baylies Circus, or one of the numbers they show on the Faschingsitzung /Carneval show in European TV.

Can you please explain, what is your understanding of a Liberal?

Can you please explain, what is your understanding of a Socialist?

What is bad of fraternizing with the Communists, when even the tops of your current administration do so?

Whom would you call a Communist? Namely!

For me it is kind of rediculous expressing this sort of opinion throughout the world, and then signing with a HAM-call.

If your callsign is true and no FAKE, as a HAM you never should discriminate any minority. You are not ANONYMOUS.

Thinking after all you have written above, Larry, your callsign must be faked. A real HAM never could do this kind of beating down on other humans around the world.

God bless, take care,
we all reading this newsgroup throughout the world would not love to loose you. Its a lough-number every time.

Gotta love this logic. You get to fly an airplane solo several times
before you can get a pilots license, but can't get on HF without first
taking a morse code test and getting a license.

I purchased a hand held antenna from Burghardt and was charged $15.00 for
UPS Ground. They don't notify of shipping charges until you receive it, at
least the time I ordered.

Honestly that was my problem since I didn't ask. The truth of it is, that is
far to expensive to charge. Keep product costs down, make up the difference
in shipping I guess.

Around here we had lots of "honeydew hams" in the '80s and '90s
(people who got ham licenses to keep in touch with family members, not
because they were interested in radio itself). Nice folks but many
disappeared when cell phones became cheap and good coverage. FRS/GMRS
took some othere. And some discovered they were interested in radio
for its own sake, too. I think that phenomenon is the main reason for
the somewhat-lower renewal percentage of Techs.

>
> > >We have intentional QRM on
> > >the bands already.
> >
> > Haven't heard any on CW, myself...

For some it will never go away, just like the animosity over incentive
licensing or vanity calls or the ARRL or VEs or whathaveyou. For

others it
will simply be "done deal, move on".
>
> > >Add a quarter of a million Techs

> > How will anyone know who is who just from a callsign? There's sure to be
> > some resentment no matter what.

There's also the possibility that there will be far fewer who will
actually
get on HF no matter what freebies are handed out. Look how much fuss
and
bother it is for some allegedly experienced people to put up a simple
wire
antenna, or to pass any amateur exams at all.

In any event the "very expensive enforcement nightmare" scenario may
or may not become a reality.

> > Some fun facts:

> >
> > Which proposal do you think will maximize crowding and resentment?
>
> Good point.

I think the ARRL BoD thought of it first. Or maybe I did, way back in
my
three-class proposal idea.

In fact, if we're gonna have a new entry class with HF, I say they
should have a piece of 160, and all of the WARC bands.

Yeah, me too, 20 per on a straight key, no biggie.

> So I would look like
> a no code HFer if this thing goes thru.

How?

> Not worried about it.

Heck, I might get on HF 'phone just for the heck of it. Lessee,
Southgate Type 9....FT-241A xtal filter, unit VFO, single conversion
for 75 meters, pair of 6DQ6s in AB2....could be a nice long-weekend
project...

Or maybe dig out that old basket-case HW-101 and slap a new homebrew
VFO in it.

FISTS, a mighty force (with a woman at the helm) is bound and
determined to have EVERYONE enjoying what they enjoy...
despite the high noise floor of independent thought.

They make [expletive deleted] sure that will be ENFORCED by
keeping the morse code test in amateurism forever and ever.

FISTS represents the "amateur community."

Ergo, all amateurs must demonstrate their dedication and resolve
by satisfying FISTS.

The amateur LAW can never be changed to remove a morse test.
Unthinkable in 1930s thinking. Heretical.

[expletive deleted] :-)

ONLY in the "amateur service," Brian.

Way back in 1958 any U.S. civilian could get on HF without any
code test or ANY other test. :-) Been that way ever since.

SGC's SG-2020 HF transceiver is sold to private boat owners who
don't have to take any morse test to operate it legally on HF. Not
even if they buy power amplifiers to boost 20 W output to 400 W.

Many, many, many government and military personnel operate on
HF quite legally every day without having to take any morse test
to "prove their technical ability" to be a "skilled radio operator."

Nope...in the US of A radio amateurs aren't "real" hams until they
pass that archaic morse test...sez the "amateur community."

That's the LAW, and, by [expletive deleted], those olde-tyme
hamme raddio kopps are going to enforce it no matter what!

Ever hear the terms "shaft encoder" or "PTO"?

> >Hell no, but you still have a 1920s style "VFO" and the rest of us do
> >not.
>
> Simple yet effective. Did someone say "phase noise"?

Glad you brought that up. One of my objectives over the weekend was to
sniff out a whole list of ponderments I had on these sorts of topics.
Phase noise: Close to the end of the 'test on 40M the amp T/R relay
hung a couple times and I got to listen to the MP sans antenna. If the
weak hiss was in fact phase noise it was probably 20 dB. down from the
base QRN noise level in the band. Lesson: Given a decent radio phase
noise is never going to be the limiting factor in weak signal
reception anywhere around where thee or me live so fugeddit, yer VFO
is not a "solution" for some "phase noise problem".

Other pins they stuck in sacred balloons:

They don't use QSK, PTT works just fine.
The AGC is always ON.

Overheard on a 2m repeater in this area of the Ohio Valley yesterday:

"KC8--- this is KC8***, come back".

"KC8*** this is KC8--- . I have a copy on you. What's yer twenty?"

"I'm up here on the hill but you're scratchy. You must be overmodulatin
or somthing".

"Well I'm copyin' you pretty good considering the distance between us".

"Yeah, 4-Roger. It's pretty amazin' that these little hand held radios
will talk this far from each other".

It is a brave new world of amateur radio.

AFAIK, every comunist country was a dictatorship, no exceptions. I
don't know why, but it seemed to always work out that way. But there
were also anti-communist dictatorships as well. Not that those were
any better.

So, there are a lot of things you must do first before you can solo in an aircraft, like learning how to land, takeoff, read sectional maps, navigate using landmarks, use the VOR for navigation, how to operate the radio and communicate with traffic control using proper procedures ect., ect., and prove to the instructor you can do all this and be safe in the aircraft by yourself. It is a lot more than learning simple Morse code. And by the way, you must be familier enough with Morse code to be able to look at the sectional map and interperate dots and dashes so you can identify VOR's, as the id is sent in code. Them are the rules...don't like it? then don't get a pilots license or ham license. Until the rules change, those are the requirements to meet, like it or not.
>
>
> ONLY in the "amateur service," Brian.

But not on the ham bands, different service, different set of requirements.
>
> Nope...in the US of A radio amateurs aren't "real" hams until they
> pass that archaic morse test...sez the "amateur community."

Yep, until the rules change, to get a license for HF operation you must pass the code test. You claim you have no interest in getting a ham license so it shouldn't matter a whit to you, so what's your beef old man? Oh, I know, you can't pass the test.

> That's the LAW, and, by [expletive deleted], those olde-tyme
> hamme raddio kopps are going to enforce it no matter what!

No, the olde-type hamme raddio kopps don't enforce anything, the FCC does and until the FCC changes the rules, it is the law. Even if the code test requirement is dropped you still won't be able to get a ham license because you can't pass the test, even as simple as it is today.

Shipping costs include more than just the UPS charge. Someone's got to take the time to package it in a suitable container and with suitable packing materials and pay for that time and those materials.

3138. WAR! What is it good for?

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-25 00:06:56 UTC
From: n2ey@aol.comSPAMNO
Message-ID: <20040224190656.13960.00000865@mb-m11.aol.com>
Source record: 87864

No, it's not a political protest thread.

Just a description of what it took to be a radio operator at radio station WAR back in WW2. Copied from a Yahoo reflector:

This from an article in Radio News of November '42 regarding the radio station WAR.

"...The average person thinks of a highly trained radio operator a man who can send radiograms with very little confusion and at a fair rate of speed....say the messages are actually handled at around fifteen or even twenty words a minute for a short period of time.

The radio operator on duty at WAR must send or receive or both at a rate of more than fifty words a minute during the eight hours of his tour of duty. He must understand the delicate equipment such as teletypwriters, radio types and siphon recording equipment. He must be able to read manual signals at more than thirty words a minute and to handle traffic at this speed if necessary. He must be able to read from recording tape at more than fifty words a minute and he must be able to operate a teletype machine..."

From [the author's] recollection in 1942 when WAR operators were tested they had to touchtype at 100 wpm, use a Kleinschmidt perforator at a high rate of speed and copy recorded slip tape at 100 wpm as well as sending and receiving manually when the automatic systems would not function.

Operators there at that time included W3GRF(sk), W0DX (sk) W9BRD/VA3ZBB, W0US and others.

Built me a digital dial back in 1975 from TTL. Work with almost any HF ham rx,
regardless of heterodyne scheme or VFO range. Worked with the Type 4 one day
and an S line the next.

This was *before* there were designs for similar units on the market or in the
big ham magazines. I still have it somewhere.

Found out after all that work that I preferred analog dials.

Nothing new there, Dave, that sort of thing has been common for well over a
decade. You get a bye because you were out of CONUS in the service of our
country all that time.

Most of those folks eventually wise up in time.

I am reminded of the QST article, way back in the 1950s, about some of the
doozies various manufacturers had to deal with:

- There was the ham who bought a receiver (I think it was a Hallicrafters, in fact) took it home and hooked it up and proceeded to listen to hams. After a time, he got a microphone, plugged it into the PHONES jack (but not all the way), flipped the SEND-RECEIVE switch to SEND, and proceeded to call CQ. He wanted his money back....

- Another, rather than RTFM, carted his receiver downtown for at least two round trips before he finally grasped the function of the RADIO-PHONO switch.

- Then there was guy who literally "fired up" his new Harvey Wells because (again) he did not RTFM, and failed to remove the cardboard shipping padding inside the rig that kept the tubes in their sockets during transit.

My personal favorite:

- Ham's receiver seemed a bit less sensitive than usual, so he lifted the lid and tightened all the loose screws - most of which were mica compression trimmer capacitors.

Nothing new under the sun.

73 de Jim, N2EY

Dave,

Exactly what is wrong with the above dialog between the two
parties involved?

Now before answering, consider this:

1. Both parties ID'd as required by law.
2. Neither party used any type of clandestine or

secret code.
3. Both parties appear to have understood each other.

Who cares about how we dialog with each other
as long as the parties involved are operating within the
law as per Part 97 rules and regs?

Cheers,
Bill K2UNK

>No, it's not a political protest thread.

Of course it is...the POLITICS of trying to keep U.S. amateur radio stuck with a morse code test forever and ever because you came upon an OLD bit a data on the 'net and you refuse to give in on that test despite the WRC-03 decision.

>Just a description of what it took to be a radio operator at radio station
>WAR back in WW2. Copied from a Yahoo reflector:
>
>This from an article in Radio News of November '42 regarding the radio
>station WAR.

Ahem...1942 was SIXTY-TWO YEARS AGO.

A few things changed at Washington Army Radio (WAR) in the next few years. In 6 years they would come over from the dark side of the modulation force and do TTY like the rest of the ACAN. By 10 years after 1952 they would start running automatic TTY relay that could read address preambles on messages and do the switch-over to another circuit without needing human intervention. It was a sort of test-bed for the AUTOVON and AUTODIN to come.

While little ADA in Tokyo (3rd rank in number of messages handled in ACAN) did a mere 220K messages a month, Washington Army Radio did about 1200K messages a month, the rate due to auto-switching of addresses.

>"...The average person thinks of a highly trained radio operator a man who can
>send radiograms with very little confusion and at a fair rate of speed....say
>the messages are actually handled at around fifteen or even twenty words a
>minute for a short period of time.

I'm sure "the average person" thought so SIXTY-TWO YEARS AGO.
Uh huh... Morsemanship was real high-tech...62 years ago.

You were there talking to "the average persons," right? You got the stats from a League poll?

>The radio operator on duty at WAR must send or receive or both at a rate of
>more than fifty words a minute during the eight hours of his tour of duty. He
>must understand the delicate equipment such as teletypwriters, radio types and
>siphon recording equipment. He must be able to read manual signals at more
>than thirty words a minute and to handle traffic at this speed if necessary.

>He must be able to read from recording tape at more than fifty words a minute
>and he must be able to operate a teletype machine..."

A TTY by Teletype Corporation is a "delicate equipment?!?!?" :-) :-)

"Delicate?!?" A Model 15 or 19?!? Hay-soose, they can crank along
at 60 WPM for days on end as long as someone feeds it paper and
ribbon...and in temperature extremes that will send a human on sick
call! Go try and lift a little Model 15 in its transit case...one-handed.

"Siphon recording equipment?" Don't siphons suck? :-)

>From [the author's] recollection in 1942 when WAR operators were tested they
>had to touchtype at 100 wpm, use a Kleinschmidt perforator at a high rate of
>speed and copy recorded slip tape at 100 wpm as well as sending and receiving
>manually when the automatic systems would not function.

Yeah, right..."touchtype at 100 WPM" on a 60 WPM machine?
Not likely...the keyboard kicks back and refuses to accept too fast
a keypress.

"When the automatic systems would not function?!?!?" HAR! HAR!

WHAT "automatic systems" in 1942? You mean the Teletype
Corporations' perf receivers and sending distributors used throughout
ACAN? Sending distributors had two read heads...would sense p-tape
run-out and automatically switch over to the other head. Very
"delicate?" Only if the manual relay person forgot to load the next
message...:-) In that case it would be "delicatessen" instead of
"delicate." The duty officer would enjoy chewing on a deli sandwich
made of butt of TTY relayer...:-)

That's riiiight...the automatic TTY switch-relay wasn't there in 1942!

I'll bet you think that Washington Army Radio just creaked along for
the ten-year interval with all-manual touchtypers creaking away at
100 words a minute on their mills, eyeshades pulled low on the
forehead, listening to sounders, clickering of the bugs as they sent
mighty morse signals over the globe when the Cold War was just
ignited.

>Operators there at that time included W3GRF(sk), W0DX (sk) W9BRD/VA3ZBB, >W0US
and others.

I hope they had fun operating all that "delicate" equipment weighing
hundreds of pounds per rack-full. Oh, yeah, and playing with the
"siphon."

Yeah, right, a Press Wireless PW-15 is "real delicate." Eighth-inch thick
steel panels on that puppy are "very fragile," too! :-) Probably
consider 15 KW RF output to be "QRP," I'll bet... :-) :-) :-)

I was an actual part of the whole of ACAN, Rev. Jimmie...for three years.
Were you in ACAN or there at Washington Army Radio? Or was it too

"delicate" for you?

Let's hear it for all those Sparkies winning the Great War through morsemanship. In 1918, maybe. By 1948, NOT.

Olde-tyme hammes DO care a great deal, Bill.

They are servicemen in the glory and tradition of the amateur service.

Why they might even serve you up on a Summary Court if you don't use the "correct" words and phrases and jargon of olde tymes EXACTLY as ordered!

"You shall key your rig in the service manner, keeping always on the alert and listening for all CW above noise level." - General Order #1 in the amateur serviceman's service manual.

Them olde-tymers have been stewing since 1958 when ordinary civilians could legally use radios on HF without a morse test. A mere 46 years ago and they've been enforcing the letter of the unwritten law ever since. :-)

Doan wurra much, Tom. Pierre Goral passed away recently to join
his deceased partner in SGC, Don Stoner. Puget Sound (where SGC
is located) is way away from your part of the country. Easterners
probably think that Puget Sound and eastern Washington isn't part of
the USA. :-)

Lots of HF bandspace is there in the spectrum...but hams can't legally
use frequencies outside of their allocated narrow bands. The SG-2020
will tune to the whole of HF. Them tuna catchers in your part of the
country (?) won't mind a bit if you enjoy your cow. Mad.

Ham burghers? Moo bettah. :-)

Beep beep.

And this is relevent to Amateur radio...HOW...?!?!

> Many, many, many government and military personnel operate on
> HF quite legally every day without having to take any morse test
> to "prove their technical ability" to be a "skilled radio operator."

And this is relevent to Amateur Radio....HOW...?!?!

> Nope...in the US of A radio amateurs aren't "real" hams until they
> pass that archaic morse test...sez the "amateur community."

"Sez" the non-licensed federal bureaucrats that YOU have
correctly cited as being "in charge", Lennie.

Or have you again changed your position on this?

> That's the LAW, and, by [expletive deleted], those olde-tyme
> hamme raddio kopps are going to enforce it no matter what!

The "law" is written by and enforced by those non-licensed
federal bureaucrats, Lennie...Not "us".

And your swipe at Amateurs again noted..."I am only here to
civilly debate the Morse Code test issue"...From the "Anthology of
Newsgroup Rhetoric", by Leonard H. Anderson.

"Flip-flop", Brain?

How do you get that from the post (requoted in it's entirety
here)...???

The "disincentive" to which he refers is to taking a test for
which there is no REGULATORY requirement...

Where's the "flip-flop", other than the ones you wear in the
shower?

Certainly. But running fiber optics lines is a very expensive
proposition, much more expensive per unit length than any of the other
utility lines. If/when real wideband access comes true in this country
it's most likely gonna at least get started via the cable. That
probability is mixed into Comcast's move to bring the Mouse to Philly.

> >And if "they" can't find a "solution" then kiss the 2.4 Ghz (got it

Hare and I touched on that when he was here, it's a classic case of
use it or lose it and it's not being used. I asked him how much ham
activity he knew about on 2.4 Ghz and he answered "What activity?".

> btw, I came across some info on the Manassas thing. $20 month for BPL - for the

Good. I hope they lose their skivvies on that deal.

In this country standard DSL runs 0.5-1.0 Mb/s and can be found for
$30/month. Cable here runs at around 3Mb/s for $45/month. The JAs have
a flavor of DSL which runs at 26 Mb/sec in heavily-populated areas for
$50/month with the HLs close behind. Manassas BPL for $50/month for
only half of 0.5-1.0 Mb/s you say? They gotta be kidding . . ! One
more dot bomb in the making . .

Yeah, it's the rate which is really scary.

> And now we're supposed to go back to the Moon, and send people to Mars. Yet the
> odds on a Shuttle failure are worse than 100 to 1...

I don't see shuttle safety being part of the politics of the upcoming campaign. As has been the case in all major explorations since Leif Ericsson's days and millenia before the folk who ride the things know they didn't buy a seat in a 737 and some are not gonna come back.

> Tell ya what, let's fund Shrub's moon-mars-madness the same way things like
> education, mass transit and health care get funded.

How 'bout we just bag the whole stupid Mars camping trip thing and first build a new version of the Shuttle then put Wideband on the front burner as a matter of national policy? Which is what the JAs and HLs did and explains why this country is years behind them in this field.

All that profit goes into Bush's pocket.

There should be a shutdown of transport. The gas prices are ridiculous
especially when you pay $2.09 here and can go to a city 100 miles away
and pay 0.50 cents less a gallon. They say it cost more to transport
the gas here, but the same truck delivers at that city 100 miles south
and another city 50 miles north where both cities north and south are
the same price. Doesnt make sense. Price Gouging is what it is.

MY BIO!!!!!
K8CPA
Okay, this is the place where I tell you how I came to know how fucked up I am.... and all the personal information about me. I will try and answer all the questions:

Date of Birth: June 28, 1972 <in the fall of 71 my daddy fucked a pig, ya see>

Place of Birth: Detroit, Michigan <in an alley behind the unit block of Waterman Avenue>

Religious Information: Well, first off, I am NOT heterosexual! I am a faggot! I accepted penises as my personal Lord in 1980. I was all of 10 Years old, I knew exactly what I was doing, I knew that if I didn't get cock in my mouth, I would not See the Lord in the rapture of it's jizz pulsing. I have been butt pumped nightly for 12 Years. Although, I was "Backslidden" for about 6 of those years, while screwing female barnyard animals. I am now back serving my Lord penis. I would like to Thank the Rev. Jack Hizhogoff of Detroit Gayboy Outreach (Web at: http://www.dgo.fag) for standing in the gap and slapping his manly dick up my fat faggot ass, and for a playroom where people like me, who were burned by chickenhawks with syphylitic dicks and fellow fags in general, could come and give their hearts back to the Lord penis. My only regret is that Rev Hizhogoff had to start pushing his manly dick in my fat faggot ass to the point where I could not bear to bend over anymore, and I returned to my favorite pastime, cocksucking in the men's room of the Detroit bus station.

"Burned" by the syphylitic cocks in my mouth and asshole?: Yep, Sure was.... I was... like I said before, I was sucking when I was 10, (around 1980), I was originally sucking just anyone, especially born again Christians and other mentally fucked up Baptist types like me. I loved those guys when theyd tell me to tongue their assholes.
Condoms were a BIG no-no.... and I believed it!

Speed ahead 4 years. in 1984, The Baptist Church I went to had a bit of a controversy, The Pastor had resigned because he was caught bobbing on my young fat faggot pee pee, and things there were in a state of chaos, and my mom did not want to suffer having to put up with my faggot punk boy ass at home. She enrolled me into the Detroit Institute for Hopless Gayboy Fatass Chumps. I started attending and believe me, going to a Full-TILT anal only gayboy school. after attending one with a stated preference for teaching Hopless Gayboy Fatass Chumps to mainly suck dick, was a MAJOR SHOCK to my system! But one thing kept me from leaving the place, was the fact that these people seemed to really love the Lord Penis. and there was this one guy, named Robert Snyder, Who played the drums, like John Bonham, (from Led Zeppelin) and we got along great.... (Not to mention he would let me drink his jizz on the sly. That was HOT! least *I* thought so! Hey! I was 14 years old, and my hormones were at full TILT! So SUE ME!) (By the way, Snyder is now married to MoparHolic and living in Ohio. I'm very happy for him.
Anyhow... After being there for about a year. I started being interested in playing drums for them, as I was a drummer, from a young age... and I wanted to use my talent for the Lord Penis. Well, I eventually got the nerve to ask if I could play for them, and they said sure, as long as I would give em all head before each show! AWESOME!!!... My first time playing for Detroit Institute for Hopeless Gayboy Fatass Chumps was a nightmare! I was scared, I totally forgot how to play because I was violently burping up the sprem I had sucked down before the show.! I was THAT scared! Anyhow... speed ahead to age 19... I was changing as a person, things were changing at Detroit Institute for Hopeless Gayboy Fatass Chumps, as well. and a bit of a disagreement rose up between me and Snyder. I wanted to suck their cocks the night before the show instead of immediately prior to it. They said they needed the rush in order to play better, and I was asked to step down from the music ministry. Needless to say I was crushed. and very upset at Snyder In fact. I didn't think I'd ever be able to forgive him for that... Anyhow... I entered into what I called "My Dark Years" from age 19-26... Drugs, Drinking, eating 7 meals a day of Burger king, Dominos Pizza and Taco Bell in order to make myself an even bigger Hopeless Gayboy Fatass Chump.... and when I found out that Snyder had turned heterosexual, I really went off the deep end... until...

MY MOMENT OF CLARITY

Well, when I was around 26, I was totally burned out on the Dominos Pizza... I was just sick and tired of being sick and tired... I needed cocks rammed up my Hopeless Gayboy Fatass Chump poop chute and I needed it BADLY!!! the people I was upset at were gone from Detroit Institute for Hopeless Gayboy Fatass Chumps. I was not getting any older... and I was ready to stop running from the Lord penis. But I had issues to resolve in my life... How could just Go back to the fags that had only "screwed" me and wouldnt let me suck cocks in the first place? I still felt like I'd been wronged! But I had the Clarity moment of a lifetime... This thought crossed my

mind...

"I was a FAGASS PUNKBOY MOTHERFUCKER BEFORE I came to the Detroit Institute for Hopeless Gayboy Fatass Chumps

Why am I allowing something that happened 7 years ago, keep me from serving my God, the Penis?????????

My Return to total Fagassedness!

Well, I was 26 years old... I was wanting to come back full time to Lord Penis. But I wasn't going back to Detroit Institute for Hopeless Gayboy Fatass Chumps (at least not at that time!!!) I had heard about a church called DGW (short for Detroit Gayboy Outreach) and I'd heard in the past that it was a nice place... So..... I wanted to be where the Holy Spirit of the Lord Penis was... and there I was... I came to the church on Ann Arbor Trail... my first experience there was a interesting one, I came in the parking lot... puffing on a 7 year old kid's cock, (in my years of being Backslidden, I picked up a nasty 2 child a day, sucking habit...) I finished my child, and went in, and right away I heard SCREAMING in my ear... "what are you doing here???" "these are the people that Screwed you, but would not let you suck dicks!" act..... and when the song service started, the Holy Spirit of Lord Penis fell, and I became very uncomfortable, to the point when I had to leave! and I did!, I remember a usher, running after me and saying where are you going??? I remember looking back at him and saying... "I can't handle this SHIT I got to get out of here!" and I left.... Well, that week... I sort of prepared myself for service to mens dicks next week, I took my Book, Gay Sex For Dummies to work. (I worked midnights as a Security Guard, so I could walk around the ghetto apartment complex I patrolled and peek in windows at sleeping little boys. and I had lots of time to masturbate...) My mother realized I was fantasizing about kids nuts.... I found myself reading the Word, and Praying for a big hairy chested man to suck off.. by Sunday, I knew I was ready to come back... Went back that Sunday.... they had a Illustrated Sermon on fellatio with pictures from several fag magazines, it was great, and needless to say, my Hard cock, Melted in the presence of the Lord Penis. and I knew that I wanted to come home.

I thank the Lord Penis for his Love, That takes us whacked out people as we are, and makes us his Servants....

Where am I now... : Currently Attending Adult classes at The Detroit Institute for Hopeless Gayboy Fatass Chumps.

HAM RADIO?!?!?!?!?!?!?I BETRAY IT AND WORSHIP ILLIGAL FAGGOT KEYCLOWNS BECAUSE THEY LIKE SUCKING COCK AS MUCH AS I DO!!!!

I was, I guess you could say, Born into the CB FAGGOT Hobby... My Father, was a Dyed in the wool CB FAG... I even had a stint in the CB radio hobby as well... Anyhow, one year (I think I was around 8 Years old...) my parents and I went to have sex with my Grandfather's

Sister and her German Shepherd, in Conway, Ark, which is the world capital of CB FAGGOTS. To say the least, was totally impressed with the FAGGOT CB Hobby, because it satisfied my craving to run my faggot mouth constantly AND to suck cocks!!!. and for years I did nothing about it, just sucking dicks constantly and that linear tuning on those tube type ILLEGAL FAGGOT KEYCLOWN amplifiers was just too hard to learn. Speed Ahead to age 14, a friend of mine, Joseph Hampton (Ham call sign N8ExtremeCockNosher-but ALSO a secret ILLEGAL FAGGOT KEYCLOWN) who lived across the street from me, and also was interested in getting his dick polished as well.. Well, we had some gay sex together... (you see this was when you had to be secretive about your gayness! I was KB8HHZ (hugely horny for zebra!) and Joe was KB8HGL (Hungry Gonad licker!)... I believe me and Joe were originally licensed in 1989....

On April of 2000. The FCC Restructured it's licenses... and I paid a renegade VE 50 bucks and Received my General Class Ticket... I often masturbate while thinking of linears for ILLEGAL FAGGOT KEYCLOWNS. And really think Riley is mean. Maybe if I sucked his dick he would not be after traitor scumbag shithunk fagboys like me.

My Call? Is a Vanity call that I paid for, it is my initials! Because as a Hopeless Gayboy Fatass Chump, I need something like that for my ego.

so there you go!

I hope this answers everything you wanted to know about me!

To give you a lough for the day, and maybe you fell better about your fuel prices:

Gernerally, fuel prices over here in EU are around 1,00 Euro PER LITER (quarter gallon), so don't complain about high prices. Though almost 50% driving diesel (abt 0,80 euros /liter) powered vehicles (exluding commercial trucks), we also have this price differences within short range.
Szenario: Driving from Venice/IT to Prague/Tschechnia (400 miles) fill up in venice for 1.09, next stop near Vienna/Austria you pay only 0.65 and in prague you can get hte liter of diesel for slightly over 50 cents.
They (Oil Companies) use the same excuse for the different prices as they do over there at your side. BTW, ESSO and MOBILE also are the most expensive brands over here.

Thats why Volkswagen, BMW, Mercedes and all the other non-US Car manufacturers sell their "premium edition" multi cylinder high consumption vehicles to the States. They never could sell lots of them over here.

Modern Diesel engines have a mileage per gallon of 60 or 70. And their performance is not less the gas engines.

So, now you can rest back at your next refueling stop, let the gas go into your tank, and when at the cashier, just SMILE.
You know, you are filling up CHEAP.

Greetings from Austria

I suspect the reason is that most in this country who expressed a religious belief at the time believed in a god, not a Vishnu or (you take your pick). If a belief in some other religious deity dominated at the time, very obviously that would have been selected instead. The intent, as I understand it, was to restore some basic standard of values to this country.

> And there is the crux of the matter. I

I'm not so sure of that. From what I've seen, most in this country who believe in a god are extremely tolerant. Just look at how some of those religions have been trashed in this country - from the word "Christ" being crossed out of a most sacred holiday ("X"mas) to religious symbols being stripped from public places to movies and TV shows that are downright insulting - all without a huge outcry. If that happened to certain other groups, I suspect some would be getting ready for a fight in the streets.

To be honest, I'm not a big fiction reader (Sci-fi or other). I tried to read Dune once years ago and lost interest. The movie was almost as bad - way over the top. Of course, I'm not a heavy movie watcher either. A big part of that is a lack of time. It's not that I dislike reading - we have way too many books (our friends joke that we have more books than the library). But, I'm one of those would wants to consume anything I try to read (read the entire thing in one sitting). However, I've had very little time for that recently. So, our recent books have taken more of a technical slant, with far less fiction and so on.

I noticed your message was posted from "news.uni-berlin.de." You are in the United States, right? If not, $15 is not excessive to ship something to Germany. However, if you're in the USA, you're right that $15 is a little high. However, I don't know why they would charge that. If I remember correctly, they only charged me about $15 (also UPS ground) when they shipped two handheld radios with extra batteries and chargers. Perhaps they have a minimum shipping charge or something.

> Honestly that was my problem since I
> didn't ask.

Well, it is certainly a good idea to get all the details before ordering - something I would recommend with any mail-order transaction.

Good point - aside from the obvious lack of technical knowledge of the two parties, this convesation was certainly no sillier than the ones that are frequently heard on SSB HF - excessive use of Q-codes instead of plain speech, saying 'hi hi' instead of just laughing, and using non-standard phonetics ("this is WXX Really Big Antenna, name here is Mike, Mary India Kilowatt England, QSL?")

Jeez!

It's already all over the place out here in the Principality of Radnor. And TE, and West Chester, etc.

The really big cost is getting from the pole into people's houses. That's the really big selling point of BPL: no installation, every outlet in your house is a broadband connection. As if.

>If/when real wideband access comes true in this country
>it's most likely gonna at least get started via the cable. That
>probability is mixed into Comcast's move to bring the Mouse to Philly.

A lot of "cable" is actually fiber. But it makes no real difference; the big probelm is getting into every overpriced little box made out of ticky tacky. The cable and telco folks took their pain upfront.

I've only ordered from them once, but my experience was generally
good. Shipping charges were listed up front ($4.95 to ship a Kaito
radio, not bad...), and my order arrived in good condition. Turns out
I'm not crazy about the radio, but that's not their fault. I'd
probably buy from them again.

Ahh, not a fight in the streets perhaps, but I don't know if you
remember the "No Pray no Play brouhaha in Texas? Thoroughly angered by a
religion/state ruling by the Supremes, a number of Religious figures
and parents came up with a plan to have "spontaneous" recitations of the
Lord's prayer before football games in Texas. People were supposed to

just show up and break into prayer before the games. It was kind of a in your face defiance of the ruling as it were.

It was planned that the first time this was going to happen was for 10,000 people to show up at a stadium that seated 5,000. A great demonstration of piety would ensue as people both inside and outside the stadium publicly expressed their prayer.

It didn't happen. Seems the 10,000 people didn't materialize. That's a good thing in my book. Even though this seems to argue for your point, it was good to see that there were enough people that saw trough this politicizing of faith. But it also means that we should not cave to those who would.

The greatest irony of the whole thing is the choice of "The Lord's Prayer". Here was a planned public recitation of a portion of the Sermon on the Mount. The part of the Sermon on the Mount immediately preceding the prayer is an admonishment to avoid doing the exact thing the "No Pray - No Play" people were doing.

You have to take your pick, is the reference to God in the POA a religious thing or can other words be substituted without a problem.

i personally think that a pledge or affirmation to the country is a fine thing, and support it wholeheartedly. However, to insert something that you are saying is *not* a pledge into a pledge is awkward at best, and besides, I don't believe that.

Perhaps more people should go back and read the sermon on the mount.

3165. Austria: Codetest out, BPL in

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-25 18:21:19 UTC
From: Ralph Aichinger <ralph@dolphy.pangea.at>
Message-ID: <1077731552.809234@news.liwest.at>
Source record: 87891

Today HF access was officially granted to all former
CEPT class 2 licensees in Austria by decree. Technical
problems with the electronic publication had caused us
some waiting for this.

(Announcement in German on http://www.oevsv.at)

But not all is good in Austria:

The EU funded BPL project OPERA makes fighting against
this form of interference even harder. In my home town,
Linz, there is a major roll-out going on, and the utility
is taking amateurs to the court for libel if they state
their position too clearly.

If you are for or against code tests, fighting against
BPL should unite all amateurs!

/ralph

No, we're talking about "repackaging" yer poor lame Southgate 8
contraption into an xcvr which would sell in 2004. Does not require a
ham license to do that but does require more than just three lousy
bands out of ten and more than only one hundred year old mode.

>Real hams. Not these wanabees we have today.

Go for it, Dan boy, "real" hams even if SK by now. :-)

In all fairness, Washington Army Radio was an old, small effort using
old-fashioned (for its time, not ours) up until about the summer of
1942. Quite inadequate to mount a worldwide war effort. The largest
real communications network was maintained by the US Navy back
then (they had already introduced TTY to warships of cruiser size
and above by 1940, the Sigaba real-time encryption cut in in 1941).

The U.S. Army Signal Corps of the beginning 1942 times was, and
their historians grudgingly admit it, not up to the herculean task
ahead. Prior to the Japanese striking Pearl Harbor on the morning
of 7 December 1941, the warning message to the Army commander
on Pearl was sent by RCA commercial-carrier message, not over
any Army radio circuit.

The very first HT (a Motorola design) was operational in 1941, even
used by FDR's Secret Service personnel, but in limited quantities.
The backpack walkie-talkie was still in the design phase in the
summer of 1942, as was the Hallicrafters conversion of their
commercial HF transmitter to the BC-610 military model. High-
power HF transmitters in the military of early '42 were largely
off-the-shelf commercial models or the antiquated 1 KW BC-339
and its big brother, the 10 KW BC-340. ACAN, Army Command
and Administrative Network, was a rather sorry lot in the middle
of 1942, mostly the left-overs of the 20s and 30s sparky days
hardly more than amateur efforts with uniforms. That would change
remarkably in the next year, taking at least two plateau jumps in
both equipment type and quantity...field tested in North Africa and
Italy and over the enormous spans of the Pacific as that island-
by-island campaign began...the Army long-distance radio comms
greatly helped by the USN in the Pacific.

What had been a picayune effort by the Army up to about the
middle of 1942 ended by 1943. By then there was less reliance on
commercial radio carriers for long-distance communications and a
tremendous growth of INTEGRATED wire and radio, truly networked

to enable the excellent logistics capability of the US military demonstrated in WW2. The era of copying the sparky methods of the USN for land use was ending...the Army was expanding in technology of radio and electronics much like the end product of the Manhattan Project.

The second-highest national priority level (behind only the A-bomb project) of WW2 was the production of quartz crystals for radios. In the last three years of WW2, quartz crystal unit production averaged 1 million units per month from over 30 companies in the USA! Not any sort of "amateur" effort." Galvin (later Motorola) was the production Hq for the quartz crystals in a time when artificial quartz blank growth was not yet known. The vast majority of those crystal units was intended for non-morse-code radios used on land and in the air and on landing craft.

The core of network messaging in the military of WW2 was the teleprinter, principally the militarized models from the Teletype Corporation headquartered in Chicago...as were Hallicrafters and Motorola. Teleprinters were ideal for integrated communications, operating well over both wirelines and radio, capable of 60 words per minute continuously, needing only to be fed paper and ribbons and some occasional oil.

The image of the lone morseman with headphones and hunched over his code key saving the nation was only that...an image...no relation to reality. That image is UNreal.

>Tsk, tsk. Misogyny at work. It would seem that you are as 1920s are the
>people you are complaining about.

Tsk, tsk, Mark, you fail to note _sarcasm_ in the posting. :-)

Note some of the OTHER players in this zoo...emphasis on
machismo ("be a real man and learn code"...etc.).

Note the long-time name FISTS as an organization of code lovers
with its close emotional attachment to machismo, strength, power
and so forth embodied by "fists."

Thumbing through any collection of U.S. amateur radio magazines
that have photographs of amateurs will reveal that U.S. amateurs
are overwhelmingly male and white. For at least a half century.

"Machismo" is a modified latino name for extreme maleness in
the traditional male role of strength, power, fighting ability, and
(to some) leadership of the tribe. :-)

I should apologize for the use of a latino label since, to us in the U.S. sunbelt (all states along the southern border), Spanish words and phrases are somewhat common in our version of English. I don't believe that is true in Australia or New Zealand or even the UK where modified English is also spoken. :-)

The "tribe" aspect shouldn't be overlooked since there is some extreme polarization on the issue and the fight-to-the-death attitude of olde-tymers demanding strict and utter adherence to to the glorious and noble ways of Their youth. Everyone MUST do as They did or not be considered as "real" as They are. :-)

Note the comment of Brian Burke in this thread. He notes that it seems perfectly permissible for any FISTS member to denounce NCI at any time, yet the converse is not possible. :-) Hypocrisy in clear evidence, the one-sided fight-to-the-death attitude in full fury by the code lovers.

I find it curiously odd that the mighty male morseman legions of FISTS be headed by Nancy Kott, clearly a female in photographs.

Of course, again from my geographical vantage point in the middle of the movie mecca, Los Angeles, here there be experts in make-up. Who knows what ever lurks behind the "front panel?" :-)

Best regards from Len (Love Easy Nancy).

I can't knock the Ninth Circuit too much. I was involved in two
pirate broadcast enforcement cases that went up there, and they
ruled in our favor.

Not to be confused with a very recent Federal District of Oregon
holding that even though the Telecomm Act of 1996 provides
otherwise, a local government can deny a permit for erection
of a cellphone tower based solely on aesthetic and NIMBY-whining
grounds. Much as we sideline-watchers wanted them to appeal, the
cellphone company decided not to appeal, picked up their marbles
and started looking elsewhere. It would have been a slam-dunk
reversal, even at the Ninth Circuit.

If you haven't noticed, Judge Alex Kozinski of the Ninth Circuit is
an electronic gadget freak, and insists on getting his hands on a
working model of anything electronic whenever one is involved in a
case before him. I've often wondered why he never got a ham
license.

Does this include jamming one form of religious practice down the throats of others who believe and practice a different form of religious practice? I think not. Some of us who believe in a Higher Being (called God, or HaShem, or Allah, or Vishnu, or anything else) also believe that it is wrong to throw it in the face of others.

When I am expected to recite the Pledge - like at the beginning of our ham club meetings - I personally omit certain phrases to make it say: "I pledge allegience to....The United States of America.... One nation...indivisible, with liberty and justice for all."

Am I unpatriotic? Hardly. My allegience is to the country, not to an object representing the country.

Am I against religion? Hardly - I'm the equivalent of a deacon in our congregation where I lead services on a regular basis.

"Liberty and justice for all" means we each get to do our own thing without impinging on the rights of others.

It seems that the South African authorities have dropped their recent licencing proposal and replaced it with a new one.

Their existing licencing scheme in South Africa has a Full (ZS call) licence and a Restricted (ZR call) licence, the latter having privileges above 30 MHz only, both taking the same theory test, but the ZS calls having to pass a 12wpm code test. IOW, exactly as the UK A and B licences were back when I first got a UK licence.

The authorities in South Africa reacted to the demise of the ITU code test requirement in a truly bizarre way, by suggesting a third class of licence with a ZT call, with a 5wpm code test and limited HF privileges. This has been shelved, due to what they say were a large number of comments. No such licence will now be implemented, so don't expect to hear any ZT calls anytime soon.

Instead, they are proposing a dual route to a full licence, offering a choice between either an advanced theory test or a code test for each candidate. This was proposed by many people in many countries whilst there still was an ITU requirement for a code test, but this is the first time I have seen it resurface since it ended. If South Africa does implement it, they will be the first and probably only country to do so.

They are also proposing to give the same limited HF privileges that they would have given to the new licence, to the existing restricted licence instead, without any addtional testing.

Yes indeed - I'm still irked about having to pass the 20WPM code for my extra while a friend of mine skated through when they started lowering the code standards.

Have I taken soldering iron, cutters, etc. to gear? Sure I have. But right now I really don't have the time to homebrew gear.

what has taxmoney to do with Liberals? Is your current president Liberal?
Maybe thats why he is spending so much money instead of giving it to the
needy in your country. Liberalism is a political direction, a middle way
between the older christian and workers (labour)parties. Not a bad
direction, though they sometimes have a touch of racism or are accused of
that.

|
| >
| >Can you please explain, what is your understanding of a Socialist?

So you think socialistic is the same as communistic? As stated above,
socialist parties (labour parties) were foundet to support the rights of the
working people. Like your big Unions, they are a kind of socialist party, or
at least the beginning of one.

| We were told
| all about evil Godless communism back in the Cold War days though. :-)
| "Better dead than red" "Kill a commie for your mommy"....

Yeah, we were told the same from our grandparents, til all the communist
parties in the world died out, due to lack of members. In Europe, there are
possibly fewer communists, as there are currently in the US.

|
| >
| >
| >
| >Whom would you call a Communist? Namely!
| >
| Chairman Mao of Red China, Kuschiev(sp), Stalin.

Good pick, but all SK . Though China still is one of their last bulwarks.
Russia has no communist government any more. Albania still is, North Corea,

Cuba, and one or the other republic in Africa.

|
| AFAIK, every comunist country was a dictatorship, no exceptions. I
| don't know why, but it seemed to always work out that way.

But there
| were also anti-communist dictatorships as well. Not that those were
| any better.
|
No, even worse. Mostly in the arabic countries. We, you and me, would call all of the arabian kingdoms, emirates, sheikdoms dictatorships. It is not only one man dictating, it is one family. Lybia, pre 2003-Iraq, Iran, ...

| >
| >For me it is kind of rediculous expressing this sort of opinion
throughout
| >the world, and then signing with a HAM-call.
| >
| Don't you guys have a 1st Ammendment over there?.....

Yes, we have constitutions in our countries and in the European Union. I don't know if there are any ammendments. What you reffering to is freedom of speech? No, there are no restrictions in that. But one has to stay for that what one is saying. And if that is bad, one has to "pay" for that bad behavior. Like Larry. It is not to supress his opinion or the disagreement, it is the words and the soul and the bad spirit coming out of his lines. The way he acts here on Usenet against other HAMS shows how he is acting on the bands. This makes not the best image of an american ham, on a newsgroup which is read throughout the world. It damages the reputation of Amateur Radio. Period.

Nobody will be able to stop your FCC from doing, what they want to do. Even when your first amendum gives you the right to argue or disput. They dont have to follow any of the proposals. I think, they just want to find out, if the way they are trying to lead the boat is not too far out of the compass. And their decission is already in their drawer.

Take care, Bob,

Actually, shipping/handling is the latest way that companies are dealing
with cut-throat discount online pricing. Do a search at www.mysimon.com
and compare prices with, and without, s/h charges. Very enlightening.

Interestingly, HRO does pretty well for ham gear, but maybe because of
the handful of competitors for big ticket items.

Ralph, one would hope so, but not in America. The PCTA are too [expletive deleted] analcentric to be distracted by BPL. See the "War! What is it good for?" thread. 1942-style radiomanship. Good grief.

Not real hams. Amateur Radio was suspended at the time, unless you consider a real ham to be one without operating priveleges.

And hopefully they weren't operating WAR using W3GRF, W0DX, W9BRD/VA3ZBB, W0US, or other callsigns.

The Morse Exam has been a regulatory requirement since 1912. TAFKA
Rev Jim has fought to keep it a regulatory requirement while many
others have called it a disincentive (obstacle, hurdle, etc). Now
that you propose that the Morse Exam be kept for access to the lowest
100 KHz of each band, he says it's a disincentive.

Yep, but don't forget that OPEC just cut production. They tie the price of oil to US dollars - and the US dollar is falling against most currencies, so they want more dollars so they aren't loosing purchasing power. Ever wonder why the US dollar is falling?

Don't be silly, Phil. Having to say the word "God" occasionally is hardly "jamming one form of religious practice down the throats of others." This is especially so in your case since you supposedly worship the same God.

> Some of us who believe in a Higher Being
> (called God, or HaShem, or Allah, or
> Vishnu, or anything else) also believe that
> it is wrong to throw it in the face of others.

Well, you're certainly right that it is just "some of" you - a darn few "some of" you. Want to take a look at your religion as an example? A good place to start might be the efforts to push American food makers to produce food products in compliance with Jewish dietary law (the tiny "K" symbol found on most canned and other food products), especially since very few other religions would have the utter audacity (hutzpa) to tamper with the food of a nation without first fully informing the people.

I pulled my statement out of what you wrote.

Would pulling the words "Under God" out of the POA be a violation of Fundamentalist Christians free speech?

Is the POA a pledge or what? When I say it I reaffirm my loayalty to my country.

Do you support forcing patriotic agnostics, atheists, and members of other religions, and those christions that actually pay attention to the sermon on the mount to pledge to something else while they are pledging to their country?

You do realize that a fair number of Christians find the act of
pledging to God offensive also?

There is not only one form of Christianity, and it's also not only
fundamentalism.

If a person doesn't want to buy Kosher food, there is plenty of other options. Unfortunately, there is only one pledge of allegiance.

Many religions practice dietary restrictions and qualifications. From Catholic to Jewish to Baptist to Hindu to Moslem.

A side note. There was just a story in the local paper about this subject. In addition to the more well known Kosher restrictions, there are a few butcher shops around our area that allow local Moslems to kill the animal in the traditional method.

And if nothing else, it is a standard of quality that is sorely lacking, unless you like manure marinated chicken, which you might just get if you don't buy Kosher.

A few points here too while we're at it.

You find audacity in a group asking for food to be prepared in a way in which their religion finds acceptable yet find no problem for wording that another group demands put into a pledge that all are expected to take? Yeah, I know it's isn't mandatory - but just ask the kid in my school who got beat up every day because he wouldn't say it. Oh yeah, he caved after a while and said it. The fundies won didn't they? All they did was prove to a kid that "Christians" will beat ya up if you don't pledge to their God. Same "Christians" in our school district kept our Sex ed so watered down as to be unrecognizable(don't worry though, anytime a girl got pregnant they were quick to blame it on the sex ed classes) and forbade any reference to evolution in the curriculum.

Wouldn't it just be better if he had a pledge to his country that didn't include the religion?

And for me eating Kosher food is just a reflection that it is generally pretty good food, as most of the preparation of the food enhances the taste and certainly the cleanliness, and finally, it is a relatively humane method of killing the animals.

Wow! Look at what they are "forcing" on us!!

Hell, you'd be better off with a CB set! That damn BC 610 was a plate modulated AM transmitter, and saturated every conductor, telephone, radio receiver, and TV with harmonics within two miles! Piece of junk!

Be serious, Mike. Nobody today is required or forced to say the Pledge of Allegiance or even a single word in it. Therefore, nobody is "forcing" agnostics, atheists, or anyone else, to do anything. If you don't like the words "under God," don't say them. But don't attempt to force others not to say them, which is exactly the goal of those trying to remove those words.

>Nice trip down mammary lane, but what has this to do with amateur radio?

TAFKARJ is trying to "prove" something by connecting SK hams with the U.S. Army and Washington Army Radio of early 1942.

He "proves" absolutely nothing other than vainly trying to promote old, old ways to do things as those for the now and future of amateur radio. Very silly effort considering the actual recorded history of the U.S. and military radio communications.

It's worse than that considering TAFKARJ was never in the U.S. military and has no experience in any era of military radio. All he has is Faith in His Calling To The Code...therefore all must Believe as He Believes. Poor guy is stuck forever in ancient radio of before his time and can't get back into the reality of today. All must remain in the standards and practices of before his birth.

In one way I can't blame him. No experience with the military forces him to rely on anecdotal stories and tales from others who weren't there, either. But, those websites with anecdotal stories and tales are sufficiently tangible that they are used as references for His version of the Truth.

His False Belief is that the U.S. military "still uses morse code" and that is almost unshakable because He champions morse code, therefore all the righteous must be using his Favorite Mode. Reality is that the U.S. military gave up on morse modes some time ago, all branches. The last branch to "use" it was the Coast Guard in their monitoring of the 500 KHz International Maritime Disaster Frequency. That went away after the maritime community cut in the GMDSS; the system that the maritime community itself proposed. The USCG stopped monitoring. End of an era, but not of the many good services performed by the USCG.

Jimmie will probably try ten kinds of wordplay to reinforce His Belief by saying "the U.S. military still uses morse code" since Fort Huachuca still has morse code classes. By selectively omitting that such training is for intelligence-gathering by message intercepts, he thinks he is winning some kind of point. He doesn't. Interception of messages is NOT communications by radio, just more of the many kinds of intelligence gathering done by the major powers through both military and government intelligence community personnel.

ARRL has long been waving the U.S. flag with stock propaganda phrases about "hams serving the country in time of need" and so forth to "illustrate" something. Such propaganda (self-serving) does nothing more than show the ARRL itself hasn't "served" anyone but themselves. Military radio communications prior to 1942 MAY have been somewhat close to amateur radio practice (amateurs did not then nor later send five-letter groups in encyphered messages as the militaries did), but that changed radically once WW2 staffing and stocking went into overdrive after the USA commitment to the war effort.

Washington Army Radio of 1944 was so radically different from what it had been in 1941 that there is no real comparison. By 1944 it had

organized into the beginning of an INTEGRATED communications hub, a center for all Army networks. Ten or twenty amateur NTSs wouldn't have been near enough to serve the nation's needs then.

Washington Army Radio of 1954 was again so different from 1944 that it can't be explained adequately in words. It needs pictures, indeed a whole book to show enough. Yes, there were amateur radio licensees serving but they were NOT using any amateur practices. Everyone did the professional thing to "Get the message through." The messages got through...by the millions, annually.

The era of network centers is diminishing and has been since AUTOVON and AUTODIN began...to eventually be replaced by the DSN or Digital Switched Network, "the government's own Internet." DSN serves telephones, facsimiles, PCs, workstations, PBXs, and can use HF radio as 2nd or 3rd contingency plan. Normally it uses high-rate fiber cable and satellite relay plus commercial leased communications services. DSN can be as secure as mid-level security allows courtesy of the tremendous advances in Information Theory and methods of cryptology opened from that. By tradition the U.S. Army handles operation-maintenance of the DSN on land with help from the USAF where their bases tie in. The Army has battalions and brigades organized and equipped to provide mobile telephone/data/FAX/image communications in the same spirit. The messages get through. Morse code isn't used, isn't wanted, is too slow, is too insecure, is too full of potential errors to trust.

Code lovers can't accept that, may never accept it since it spoils their self-image of important communicators. They bitterly resent removal of the "tested at twenty" old top level rank-status-privilege in their "service." To ease their bitterness they resort to the imagery of some kind of Tolkien-like Middle Earth to attempt stressing the "importance" of good radiotelegraphy through old tales and anecdotes of long ago. None apply now in any radio service but they cannot give up...all must capitulate to Them and Their Beliefs.

By the way, I forgot to add the words "literally jamming one form of religious practice down the throats of others" to the end of the paragraph above (playing on Phil's claim that Christians are "jamming one form of religious practice down the throats of others").

> If a person doesn't want to buy Kosher
> food, there is plenty of other options.
> Unfortunately, there is only one pledge
> of allegiance.

Since so few people are even aware of the practice, they're not given the option to choose. Based on my discussions with many people over the years, few know the little "K" symbol on, for examples, the cans of tomato sauce, tomato paste, Kraft Miracle Whip, or whatever, means it was prepared according to Jewish religious dietary law (Kosher). Even if they did, they would find it very difficult to find an alternative today. According to one Kosher licensing organization (Kof-K Kosher Supervision), there are about 75,000 Kosher-certified food products and about 160,000 Kosher-certified ingredients available in the United States today. Those numbers clearly

suggest the vast majority of products on grocery store shelves today are Kosher.

> Many religions practice dietary restrictions
> and qualifications. From Catholic to Jewish
> to Baptist to Hindu to Moslem.

There is a huge difference between having personal eating habits which conform to a religious belief and pushing food manufacturers nation-wide to adopt your religion's food laws (and hiding that from consumers). I have yet to see a "C" for Christian or "M" for Moslem on any commercial food products in this country (or any other country). That little "K" symbol is commonplace on grocery store shelves in this country today.

> A side note. There was just a story in the
> local paper about this subject. In addition
> to the more well known Kosher restrictions,

I'm not talking about speciality butcher shops. I'm talking about the commercial food products found in mainstream grocery stores such as WalMart, Win Dixie, Food Lion, Krogers, Bi-Lo, and others.

> And if nothing else, it is a standard of quality
> that is sorely lacking, unless you like manure
> marinated chicken, which you might just get
> if you don't buy Kosher.

Quality food was prepared in this country long before this Kosher practice started. Indeed, in my opinion, the food just twenty or thirty years ago was much better. Food based diseases are more frequent compared to just three decades ago. The quality of beef today is appalling. Pork has almost disappeared from resturants. And I truly miss a real, old fashioned, hot dog with pork instead of turkey or beef (or the fake pork found in the new "pork" hot dogs today).

> You find audacity in a group asking for
> food to be prepared in a way in which
> their religion finds acceptable yet find
> no problem for wording that another
> group demands put into a pledge that
> all are expected to take? Yeah, I know
> it's isn't mandatory (snip)

And you find two words in a non-mandatory pledge equal in audacity to attempts to manipulate the food we eat in this country?

> And for me eating Kosher food is just a
> reflection that it is generally pretty good
> food, as most of the preparation of the
> food enhances the taste and certainly the

> cleanliness, and finally, it is a relatively
> humane method of killing the animals.

Kosher certification addresses Jewish religious or spiritual requirements - Jewish dietary laws concerning processed fruits and vegetables, animals that are non-ruminant (no pork), non-domesticated birds, seafood without scales or fins, the removal of blood from meats, the mixing of milk and meat, the use of a Rabbi for the slaughter of animals and for certain parts of the production of hard cheeses and grape products (wine and so on), equipment used to prepare Kosher foods, the purchase of a license to use the "K" symbol on the company's products, and so on. There is very little in any of this which specifically insures the quality, taste, or physical (not spiritual) cleanliness of the various products.

I've been a customer of Universal Radio for well over
10 years and always received cureous and polite service.
I find using the 800 order line makes everything faster
moving. I recently purchased an Icom-R75, ordering it on
a Saturday, having the DSP optioned installed (they do it for free
and it eliminates any warantee problems). They intalled the DSP module
on Mpnday and shipped it Tuesday, I received the receiver Thursday
and it works as I expected-good. The receipt shows that Universal installed
the DSP unit and is under full warantee. I's reccoment Universa Radio without
a second thought. Grove, Lentini and AES are also very reliable
as is R&L I've used them all with good results

Not quite right, the ZR licence is no-code, but yes, it is bizarre to greet the end of the code requirement by suggesting a new licence with a code test.

And Jim, I didn't say it was a bad idea to have a dual track system with code and theory alternatives. It's actually quite a good one. No doubt now someone will put that in petition number 18, or whatever number we are up to now.

I won't though, because it isn't going to happen. We don't know exactly what the FCC will do, but we do know two things that they are on record as saying:-

1) They don't beleive that the code test serves a useful purpose;

2) They won't rearrange subbands until a consensus emerges amongst us.

So, we do know really (although some are in denial) that the NPRM will dump Element 1 completely.

We can be rather less sure what it will do to reform the unnecessary proliferation of licence classes, and the equally unneccessary slicing and dicing of the ham bands that goes with it. I hope it might do something in this regard, but it is perhaps more likely that it will do nothing, or at least as little as possible, as they probably will decide that we still don't agree with oneanother.

> SGC's SG-2020 HF transceiver is sold to private boat owners who
> don't have to take any morse test to operate it legally on HF. Not
> even if they buy power amplifiers to boost 20 W output to 400 W.

If buying a boat in order to be able to operate marine radio equipment as a secondary hobby is what turns you on, go for it.

> Many, many, many government and military personnel operate on
> HF quite legally every day without having to take any morse test
> to "prove their technical ability" to be a "skilled radio operator."

You're a little old to re-up, Leonard but if you can obtain an age waiver, I'm sure the military folks won't mind if you want to work some military DX or chew the fat with a military station in Germany. Have a blast.

> Nope...in the US of A radio amateurs aren't "real" hams until they
> pass that archaic morse test...sez the "amateur community."

One thing is for certain. Military ops, boat owners, CBer's and the like aren't radio amateurs until they pass an amateur radio license exam. Those others folks aren't a part of that "amateur radio community" unless or until they do so. You should have that drill down by now.

I almost forgot, Len. You're the only guy capable of reading a book.
You're the only guy who knows anything about electronics. You're the
only guy who was ever in the U.S. military. You're quite a fellow.

Aren't you also the guy who hasn't achieved that "Extra right out of the
box" he crowed about several years back? What? Not even a Technician
"right out of the box"?

They certainly understood each other. Neither understood the concept of a repeater. Now, to what I understand: I understand that both of these ops have brought their bad habits from CB radio with them. Neither has bothered to listen to other hams. These two were joined by a new YL op the other day. She was a "do you want me to pick up bread and milk?" type. I'll be very surprised if any of the three will be active on the ham bands in five years.

> Who cares about how we dialog with each other
> as long as the parties involved are operating within the
> law as per Part 97 rules and regs?

I do.

We've even got a new op who can be heard moving between the several local repeaters for a goodly part of each day saying, "This is KC8*** radio check". He'll sometimes pull this stunt on top of an ongoing QSO. He has been informed on a number of occasions about how to make it clear that he is seeking a contact and how not to QRM an existing contact but he persists. When he does enter a QSO, he normally asks the individuals he contacts if they have any radios they'd like to part with. He has now asked me about six times. This fellow is annoying and others--old timers and recent licensees--are beginning to avoid him.

There is another new ham in the area who was previously a CBer. He was licensed only this past May. He quickly became adjusted to how things are done on the ham bands. He asks questions about antennas, modes other than FM, bands other than 2m and about operating practices. He aroused interest in his grandson, who is now licensed. I'm betting that these two will stick.

I'm not enough of an old timer to remember hams losing the 11m band. It took place five years before I obtained my first license. I am pleased that you've been provided a haven for your HF radio activity.

By the way, radio amateurs are "ordinary civilians" who happen to have passed a license exam.

Us? The several of you dwelling within the tired body of Leonard H.
Anderson?

> So far you haven't passed those tests. Poor baby.

So far, the unlicensed in medicine, unlicensed in amateur radio "Doctor
Len" is the only person who has seen a need for them. Poor baby.

> Now, you sit right down in front of your raddio and have an oriongasm
> thinking that those without ham licenses would never understand it.
> That seems to sooth your snarly nature.

I'll sit in front of any of my radios and operate on any of the bands
and modes my license permits. You may do as you can.

> Work some DX. But don't reveal that some of them are out-of-band
> Frenchmen.

Why are you worried about whether Frenchmen are in or out of bands which
you can't access? French authorities (and Brian Burke) take care of
French ops. I'm only concerned with where I operate.

I'm a Christian and I find it very offensive. I know many other Christians (several dozen at least) who find the taking of His name in oaths and pledges to be offensive as well.

Compliance with kosher rules is done for purely economic reasons. The food processors are not forced to comply with those rules by those who observe them. They do it because they'll sell more product that way. A lot of us who don't comply with the kosher rules look for that mark anyway for purely nonreligious reasons.

>
>> If a person doesn't want to buy Kosher

BINGO!

And the pledge is usually said at public gatherings.
>
> Since so few people are even aware of the practice, they're not given the
>option to choose.

I'd estimate that over 95% of the adults I know around here know what "kosher"
means. Most of them are not Jews, and most of the Jews do not keep kosher, but
they know what it means.

>Based on my discussions with many people over the years,

How is it hidden?

>I have yet
>to see a "C" for Christian or "M" for Moslem on any commercial food products
>in this country (or any other country).

That's because those groups don't have dietary rules which require
certification.

>That little "K" symbol is
>commonplace on grocery store shelves in this country today.
>
So is its absence. Both are driven by economics, nothing more. You don't have to buy kosher-certified food.

>> A side note. There was just a story in the
>> local paper about this subject. In addition

>started.

HAW! That's a good one! The kosher practices are older than this country!

OTOH, if you're talking about Native American food practices...

>Indeed, in my opinion, the food just twenty or thirty years ago was
>much better.

In some way, yes, in other ways, no. But none of the change is due to kosher laws.

>Food based diseases are more frequent compared to just three
>decades ago.

I'm not sure if that's statistically true, or if we just have more publicity and identification about them now.

>The quality of beef today is appalling. Pork has almost
>disappeared from resturants. And I truly miss a real, old fashioned, hot dog
>with pork instead of turkey or beef (or the fake pork found in the new
>"pork" hot dogs today).

If you mean that ordinary-grade meat has less taste and seems to be less substantial/satisfying than years ago, I agree 100%. But again this has nothing to do with kosher rules. It's due to the industrialization of agriculture - merger/takeovers that result in a few giant food process corporations, growth hormones, "scientific" feed, additives, selective breeding and other methods

such as flash freezing, designed to keep down the cost of production. You *can*
get good beef, pork, chicken and other products, but they cost more and may
require you to shop at places like Whole Foods and Trader Joe's.

>> You find audacity in a group asking for

Most of the meat and dairy products in "mainstream" supermarkets are not kosher
certified.

And the mark many folks look for today is "organic"

It isn't my way. You are not a radio amateur under anyone's defintion
of the term.

> Hobbyists in radio are defineable as amateurs in radio if they do not
> make any income from it.

Only some SWL with delusions of grandeur would tell his friends that he
is a radio amateur. The terms "amateurs in radio" are not synonymous
with "amateur radio" or "radio amateur".

> LICENSES in amateur radio are required to transmit RF on allocated
> amateur radio bands in order to be legal with the federal government.

Really? You constantly amaze those of us who hold such licenses. We
had NO IDEA that such was the reason for those licenses. You're a
fountain of readily obtainable and commonly known information.

> Poor baby, doesn't understand that amateur radio licenses are NO
> GOOD outside of allocated amateur bands. That's true. Anyone can
> verify that with Title 47 Code of Federal Regulations, especially in
> Parts 1 and 2..

Well, poor Leonard, I think those of us holding such licenses are well
aware of just where in the RF sprectrum we may use them. That's another
great piece of commonly known information you've provided. I'm ever so
grateful.

> Did you know that the federal government can operate all kinds of RF
> emitters without having ANY operators licensed? True. A ham license
> there isn't worth the price of a ham sandwich. No criminal liability!

Super "news", Len, though I don't have the slightest idea of why I'm
supposed to care.

> Don't you just HATE it when your rant gets destroyed?

I dunno about anything being destroyed. It seems you've decided on a
detour.

> >> I've been involved with radio and electronics, both with and without

> inexorably drawn over the edge. It's a very long drop below you...

You can type "Noooo, noooo" until your fingers bleed. That won't change things. Every time I've written "interest in amateur radio" or "interested in amateur radio", you've responded with this "interest in radio" thing. Your "interest in radio" can be satisfied by tuning in Sean Hannity.

> LICENSED amateur radio is what you are trying (vainly) to say and then

Why would I be angry that you haven't lived up to your boast?

> You STILL can't understand why I am here. I've explained it enough
> times, but your have this set-in-concrete mind that can't get flexible
> enough to understand. Tsk, tsk, tsk.

Nobody seems to understand why you're here. You aren't a regulator. You aren't a radio amateur. You've commented to your government.

> >> Right. The First Amendment of the United States Constitution states
> >> that no citizen can comment about any amateur radio regulations unless

> >> they already possess an amateur radio license. Right.
> >

> Earth view, Frodo. [you aren't Golem, but the resemblance is there]

Comments are much involvement as you'll have in amateur radio, Leonard.

> >A number of them did merit explanation after you attempted to twist them

> >persist in deleting that very important word?
>
> Sigh..."amateur" refers to an activity without pecuniary interest. The
> FCC uses those same words. [the FCC granted your amateur radio
> license]

Sigh You aren't a radio amateur. The FCC did not grant you an amateur
radio license.

> The word "amateur" (with or without all-capitals) does not explicitly
> say TRANSMISSION OF RF ENERGY IN ALLOCATED AMATEUR
> RADIO BANDS. Your prized amateur radio license is NO GOOD for

More info from Leonard H. Anderson, fountain of already known
information.

> In fact, in some U.S. civilian radio services it is perfectly legal to
> transmit RF energy WITHOUT a license of any kind!!! Sunovagun!

That's great. Go there. Do that.

> Poor baby. Another Heilian rant shot down in flames.

Len, you wouldn't want it put to a vote about who is the r.r.a.p.
ranter.

> >You've misdefined your interest.
>
> Not me. YOU. All wrong, Golem...er, I mean Frodo.
>
> I HAVE defined my "interest" quite correctly.
>
> That you totally refuse to believe it is not my problem. Yours.

You've have never stated your obvious interest: to post frequent,
lengthy items in a newsgroup about amateur radio.

> Your intellectual presbyopia is glaringly obvious.

Is it as obvious as your obsessive-compulsive need to haunt an amateur
radio newsgroup?

> >You have interest in internet newsgroup posting.
>
> No more so than regular physical exercise. :-)

Typing is your idea of regular physical excercise? :-) :-)

> >You have interest in outlining your past professional glories.

> I've spent 51 years in professional radio-electronics activity and none

> 51 years ago. Before your first hamme raddio license. TS for you.

Your kidding, right?

> >You aren't involved in amateur radio.
>
> Not involved in TRANSMITTING RF ENERGY ON ALLOCATED HAM
> BANDS, true. :-)

Don't sweat it, Len. You can inhale some of that transmitted RF energy
on allocated ham bands with your trusty Icom receiver, as an SWL.

> TRANSMIT, Baggins, TRANSMIT. Like in legal RF energy within
> those tight, confining HF band bounds.

Oh, we're allowed to receive too, Len. It is actually highly encouraged
to do some of both. We can even turn the stuff off and watch a movie or
read a book. I have all the room I need within to tight, confining
amateur bands denied to you.

> I'm just advocating the elimination of morse code testing for any radio

> production of drama and pathos, a giant mountain built out of a mole
> hill of your old morse message blanks. Tsk, tsk, tsk, you try such
> theatrics! Do you have an interest in the theater? :-)

"I'm just", "I'm just". Who asked you?

Do I have an interest in theater? Oh yes. My interest extends to attending plays and watching films. I don't attempt to tell anyone associated with theater how to act, nor would I attempt to outline how regulations governing theater production or movie making should be changed. I'd never call for a minimum age for actors either.

> I'll just put you down in the same emotional category as other
> emotionally-seven-year-old Extras.

They are as involved as they'd like to be. You are as involved as you can be.

"It" will be enforced? What is "it"?

> FISTS represents the "amateur community."

FISTS represents a portion of the amateur radio community. You, on the other hand, play no part in the amateur radio community.

> Ergo, all amateurs must demonstrate their dedication and resolve
> by satisfying FISTS.

How funny is that? You'd have us believe that your views on how amateur radio should be adopted and you have nothing to do with amateur radio.

I am serious, Dwight! I notice you snipped the part about the kid in my school and his problems with the POA. You're correct, he wasn't forced to say it. But he sure paid the price for it. Of course there are plenty of good Christians that probably support his beatings due to his atheism. That's one of those little life lessons that left an impression on me.

> Therefore, nobody is "forcing"
> agnostics, atheists, or anyone else, to do anything. If you don't like the
> words "under God," don't say them. But don't attempt to force others not to
> say them, which is exactly the goal of those trying to remove those words.

Nonsense, the original POA did not include those words - they were added later.

If the effort to remove those words is an effort to "force people not to say them" then conversely the effort to put them into the POA was an effort to force people *to* say them.

Francis Bellamy wrote the POA in 1892 and it didn't contain the words "under God" in it. There was a minor change from "My flag" to "the flag of the United States of America", a good change for distinctness.

then in the 1950's, the Knights of Columbus pressed D. Eisenhower to modify the Pledge.

What kind of organization is the KofC?

Eisenhower himself said about the newly modified pledge:

"...in this way we shall constantly strengthen those spiritual weapons which forever will be our country's most powerful resource in peace and

war."

Hmm, sounds like pledging to God, and right from the horses mouth.

So since we have an altered pledge, and the person who is most responsible for it proclaims it as a spiritual weapon, it sounds to me like a religious oath as well as a pledge to our country.

Of course! most Christians I know actually pay attention to the sermon
on the mount, which tells the faithful not to either have "Public
prayer" and specifically forbids oaths to God.

Lessee. We feed cattle an interesting concoction of food. Did you know
that cows are fed newspaper, chicken manure, ground up parts of other
cows, ground up fish guts and their contents, leftover junk from
restaurants and lots of antibiotics (to protect them from their food?) I
can tell meat that has been fed this way, because it tastes like fish to
me! Know what the "formula" is that is fed to many calves? Blood from
slaughtered pigs and cows. Side note is that we are turning cattle into
vampiric, shit eating cannibals. It has been know for quite some time
that cannibalism is a great way to infect the person/animal doing the
cannibal act with nasty infectious and horrible diseases. Enter Mad Cow
disease!

The idea of blaming this on Kosher food preparation is ridiculous and
just plain wrong. Dwight, you are way off on this statement, and I
expect better arguments from you.

>>>You find audacity in a group asking for

The preparation process has a LOT to do with the taste of the food. The
bleeding and salting of chickens for instance provides for a superior
flavor, and even the color of the meat is more appealing. Same with
beef, sans the salting.

I got to thinking about this Dwight.

The pledge of allegiance is MY pledge to the country. It's my pledge,
Your pledge, and every patriotic American's pledge.

What right do you and other people who think that it is supposed to
reflect you religion's particular take on how the country "should be" to
make up a pledge that contains a "spiritual weapon" that we are supposed
to pledge to?

It is everyone's pledge, not just one group's.

OK

Neither understood the concept of a repeater.

So what? Does that bother anyone?

Now, to what I understand: I understand that both of these
> ops have brought their bad habits from CB radio with them.

What bad habits. I don't see any at all. You may
not like their conversation, but there is NO aspect
of Part 97 that requires any specific use of only
"ham" approved lingo...or did I skip that chapter somehow.

> Neither has
> bothered to listen to other hams.

For what reason must they do so? What about their
use of the repeater as you dicribed is wrong?

> These two were joined by a new YL op
> the other day. She was a "do you want me to
> pick up bread and milk?" type.

One of my best ham buddies is a long time Extra and his wife
chats with him on almost every homebound commute. In
some cases she gives him a "honey do" list of things to get
from the market on the way home. What's wrong with
that (i.e. what's wrong with "pick up bread & milk."

I'll be very surprised if any of the three will be active on the
ham bands in five years.

I'll presume that should make you very pleased then.

> > Who cares about how we dialog with each other
> > as long as the parties involved are operating within the
> > law as per Part 97 rules and regs?

>
> I do.

Based on what authority? You are free to worry your
poor self about whatever you want, but thankfully you
have no authority to enforce your own standards of how
to speak on the air on anyone but yourself.

> We've even got a new op who can be heard moving between the several
> local repeaters for a goodly part of each day saying, "This is KC8***
> radio check".

And that violates what in Part 97?

> He'll sometimes pull this stunt on top of an ongoing
> QSO.

That then IS a violation. I'd fully support the area hams
directing him as to the rules to NOT QRM an existing QSO.

> He has been informed on a number of occasions about how to make it
> clear that he is seeking a contact and how not to QRM an existing
> contact but he persists.

If, that is as you say, then report him to the FCC.

Hi, The local utility here has a ISP service via the power lines and I have a CB station that I like to talk on at night. Yesterday I received a letter from a law firm threatening to sue me if I don't cease my CB operations in ten days. I don't run illegal amps or anything. Does anyone know if what they are threatening me with is legal?

In article <c1fijaksd06$1@news.t-online.com>, "Helmut" <Helmut@Stroeml.com>
writes:

>Can you please explain, what is your understanding of a Liberal?

Helmut:

Gladly. A Liberal is a person who uses other people's money to assuage
his own guilt.

>Can you please explain, what is your understanding of a Socialist?

A Socialist is a person who views government as the ultimate alternative
to his own ingenuity and initiative.

>What is bad of fraternizing with the Communists, when even the tops of your
>current administration do so?

If by "fraternizing," you mean seeking diplomatic solutions to potentially
dangerous relationships between nations, then I guess we're guilty of that.
Thank goodness. This "fraternization" is not necessarily a good thing or
a bad thing, just something that must be done to accommodate the realities
of modern human relations between peoples of radically different worldviews.

>Whom would you call a Communist? Namely!

Anyone who seeks to place the government in the position of being the
ultimate power over the people. Marx, Lenin, Stalin, Kruschev, Ho Chi Ming,
Kim Sung Il, are all modern-day examples.

>For me it is kind of rediculous expressing this sort of opinion throughout
>the world, and then signing with a HAM-call.

Well, that's your own opinion, and as an American, I respect your right
to hold that opinion and express it in public. What I don't understand is
why you apparently don't wish to give me that same freedom. Moreover,
the fact that there are many people in this world with the same problem
you have, is part of the reason why us Americans must make every effort
and endure every sacrifice required to remain the strongest power on
Earth -- in order to prevent people who think like you from effecting global
domination.

>If your callsign is true and no FAKE, as a HAM you never should discriminate
>any minority. You are not ANONYMOUS.

Why would I wish to remain anonymous when expressing my opinions,
in any forum -- public or private? I am an American, and I have the freedom
to express my opinions without fear -- the same way you expressed your

opinion of me.

>Thinking after all you have written above, Larry, your callsign must be
>faked. A real HAM never could do this kind of beating down on other humans
>around the world.

You can check it out easily enough by going to qrz.com/callsign/k3lt. My callsign is not fake, and I am not impersonating anyone named Lawrence J. Roll, as I am he.

>God bless, take care,
>we all reading this newsgroup throughout the world would not love to loose
>you. Its a lough-number every time.
>
>73 de OE8SOQ
>Helmut

Unfortunately, I did not find your post very amusing. It did, however, serve to reinforce a few of my long-held beliefs about certain non-Americans. I have lived in Europe, and found European people to be generally very accepting of Americans, and grateful for our contributions to their own peace and security. But there are the very small minority who must exert your own independence by taking your silly little jabs at us. I understand, and in a way, can't blame you. Since you will never be as wealthy and powerful as America, there is bound to be some resentment and pockets of disaffection. So go ahead, and sling your little barbs. I'm big enough to handle it, and so is America.

May God Bless you and your countrymen. Austria is a beautiful country and the homeland of my direct descendants. You are lucky to live there, and us Americans are lucky to have you as friends and allies. I hope we do meet on the air someday. Maybe it is possible for us to be personal friends as well. I certainly hope so.

>bands.

Helmut:

Very interesting. I find it quite extraordinary that you are able to gauge my
behavior on the bands by what you read from me on Usenet. In reality, my
on-the-air behavior is probably very much like your own, assuming that you
are friendly, courteous, and helpful to your fellow hams.

>This makes not the best image of an american ham, on a newsgroup
>which is read throughout the world. It damages the reputation of Amateur
>Radio. Period.

I think that far worse damage is done by making rash, totally blind judgments
which, in any other forum, would be legally actionable as libelous.

>Nobody will be able to stop your FCC from doing, what they want to do. Even
>when your first amendum gives you the right to argue or disput. They dont
>have to follow any of the proposals. I think, they just want to find out, if
>the way they are trying to lead the boat is not too far out of the compass.
>And their decission is already in their drawer.

All of the above may be true, but at least, here in America, we have an
abiding respect for other people's opinions which is codified into our law.
Whether or not the FCC creates a code-free HF license remains to be
seen, and it is not necessarily a pre-ordained decision, although I expect
that a no-code HF license will be the ultimate result of the FCC's rulemaking
process. If it is, then I must live with the decision, knowing that it was
made with the consent of the majority, even though that majority may not
represent my own opinions.

As for you, my friend, I am pleased to advise you that I do not use your
behavior on Usenet as a means of judging your on-the-air behavior as a
radio amateur, because I have not personally experienced the latter.
However, as a Usenet participant, I must say that you seem to have the
typical shoot-from-the-hip attitude down pat. Nothing new here.

I have yet to meet a ham who "stewed" over loosing 11 meters. It was hardly used, the only thing anyone might "stew" about is how it has turned into the sewer pit of the radio spectrum by the cbers who refuse to follow rules.

You misinterpret what Kosher certification is all about.

No one is "forcing" manufacturers to do anything. The process
is that if the manufacturer wants to carry the certifcation - and
thereby open the market up to those folks who will not buy/eat
products which do not have that certification - then there are
specific standards which must be observed and inspections by the
certifying body made to assure conformance. The same thing holds
for products which are certified organic or diabetic-safe, for
example.

No "force" is involved - if the manufacturer does not want to reach
that sector of the market, so be it.

The only legal requirement is that if a manufacturer or seller puts
forth the product as Kosher or organic or diabetic-safe it must
conform to recognized Kosher or organic or diabetic-safe standards.

As far as Kosher certification goes, a simple "K" means that the
manufacturer self-certifies it, which may be insufficient
certification for certain consumers. If specific symbols are used,
the product must have been certified by the organization that the
symbol represents. Violations of the above bring Truth-in-Labeling
laws into play.

It's the manufacturer's choice - free market, if you will.

>I just checked the kitchen shelves. Prego and Ragu tomato sauces
>aren't kosher.

More accurately, they aren't certified Kosher. If they are
all-vegetable products (Marinara, etc) they most probably would
qualify if they are run on different production lines from the
products that contain (non-kosher) meat.

>>I have yet
>>to see a "C" for Christian or "M" for Moslem on any commercial food products
>>in this country (or any other country).

Dwight - when is the last time that you have been in a Middle
Eastern ethnic food grocery and read the Arabic inscriptions on
certain products? BTW - any product that is certified Kosher meets
the Muslim Halal requirements.

>"Manipulate"? "Kosher" simply means "clean", IIRC.

It actually means "acceptable" or "proper".

>>Kosher certification addresses Jewish religious or spiritual
>>requirements - Jewish dietary laws concerning processed fruits and
>>vegetables, animals that are non-ruminant (no pork), non-domesticated
>>birds, seafood without scales or fins, the removal of blood from meats,
>>the mixing of milk and meat, the use of a Rabbi for the slaughter of
>>animals and for certain parts of the production of hard cheeses and
>>grape products (wine and so on),

Not so. The slaughterer or certification supervisor does not have
to be a rabbi. but must be trained and qualfied to do the job properly.
My wife has long been certified to supervise kosher operations in
synagogue kitchens, and when she was working in the food industry
she would routinely have to explain to the (mostly immigrant) Christian
production line workers that the kosher inspector who came through
quarterly was not "the rabbi blessing the food".

BTW - CocaCola maintains several inspectors as full-time employees
checking not only the production lines but also the sources of their
ingredients. AFAIK all Coke products are certified.

>>equipment used to prepare Kosher foods, the purchase of a license to
>>use the "K" symbol on the company's products, and so on. There is very
>>little in any of this which specifically insures the quality, taste, or
>>physical (not spiritual) cleanliness of the various products.

Not so. A spoiled or dirty product cannot be considered kosher regardless of what label attaches. Each and every animal which is slaughtered for food must have its entrails examined for signs of disease before it is allowed to go onto the processing line. The standards used by kosher inspectors exceed those of the FDA by several orders of magnitude (at one time I served on a local certifcation panel).

Questions of taste are up to the individual. Put two brands of the same product - both certified kosher - side by side. I like the taste of Brand A but not that of Brand B. You like the taste of Brand B but not Brand A. It's all subjective.

Just like the sign says in the Tommy's Joynt Restaurant in San Francisco - "we certify that our buffalo meat is real buffalo. We make no claims as to its taste or texture - just that it's real buffalo". The same applies to a kosher certification.

>Most of the meat and dairy products in "mainstream" supermarkets are not
>kosher certified.
>
>And the mark many folks look for today is "organic"

The only "forcing" is that if a product is labeled Kosher (or organic, or diabetic-safe) and it is not in fact Kosher (or organic or diabetic-safe) the State or Federal government will get involved in Truth-in-Labelling law violations.

Foolishly ignoring the enormous stench of a troll...

In the US (and some other places) you can sue for just about anything,
including "I don't like the color of your shirt".

Winning such a suite is a separate issue, and I am sure this will be debated
with about 579 posts while it becomes a liberal vs conservative arguement.

Gun control is using both hands.....

Besides, BPL should be "Must accept interference from legal radio services
and not cause them any interference". Actually, BPL just should not
be....

BPL must have an FCC part that it falls under as it will radiate an RF
signal that could potentially interfere with other services (Namely the
Amateur HF bands damn it!)

If so it probably has a provision that says it must accept interference
from other legal services. It's going to be very interesting to see how
it all plays out.

But in my opinion running high speed data over open and unshielded lines
is asking for trouble.

If an act is completely voluntary (no demand, coercion, or gain), the person cannot, by definition, be forced. The pledge today is entirely voluntary - nobody is forced to say it or any part of it.

It is not "my religion." I've made no claim to any religion whatsoever in this discussion. That does not, however, change my perception that Christians are being unfairly trashed in this country today. You brought this (the words in the POA) up in a public newsgroup discussion. Since it is "weooh, OT," I have to wonder why. You then went on a rant about the Knights of Columbus, Eisenhower, and so on, acting as if your life was being destroyed by the mere mention of those words. Trust me. Your life won't change whether those words are there or not.

As for your question about my right to support those words in the POA, it is the same right you have to rant against it. Those with a belief in god are the vast majority in this country and I have no problems whatsoever with non-intrusive expressions of that.

Then you're truly the first, and only Christian, I've talked to who finds the words "...one nation, under God..." offensive. As for the others you speak about, your experience is vastly different than mine.

> I'd estimate that over 95% of the adults I
> know around here know what "kosher"
> means. Most of them are not Jews, and
> most of the Jews do not keep kosher, but
> they know what it means.

Don't twist the subject, Jim. Did that same 95% of the adults you know also know that much of the food in our grocery stores, the foods we eat everyday, is prepared according to dietary laws of the Jewish religion? Were they aware of that tiny "K" symbol on many of those same food products? These are the things I talked about, not the meaning of a word.

> And the problem is?

You don't have a problem with the fact that a religious group is manipulating much of the foods we eat? There are very few things in this world as intrusive as that. Given a choice between this and the word "God" in a pledge, I'll choose the latter any day of the week.

> I just checked the kitchen shelves. Prego
> and Ragu tomato sauces aren't kosher.

Those reading are free to look through their own kitchen shelves for examples.

> How is it hidden?

By not asking the people of this country whether they even wanted their foods changed to conform to Jewish dietary law before doing so. Through the use of a tiny, nondescript, "K" symbol instead of simply saying this product was prepared according to the dietary laws of the Jewish religion. By not making that "K" symbol known to the public through publications and other media. By downplaying the religious significance (by claiming it just means "good food") whenever the topic is broached publically.

> That's because those groups don't have
> dietary rules which require certification.

True, Christians and Moslems don't have dietary rules which require certification. But, by the same token, Jews don't have dietary rules which require the rest of the nation to eat the same things. If Jews have special dietary needs, let them have a small section of the store just like any other group wanting specialty foods. But nothing justifies the manipulation of mainstream food products to conform to the requirements of a specific religion in a country that has, at it's core, the concept that no single religion may dominate.

> Brings in the $$.

If Kosher truly brings in the money, why not advertise it directly instead of hiding it under a tiny, nondescript, "K" at the bottom of a product label? Clearly, the claim that it increases profit is somewhat suspect.

**

THE BPL FIGHT: ARRL REACTS TO FCC NPRM

The ARRL and many others in ham radio are not happy with last weeks FCC decision to proceed with further implementation of Broadband Over Powerline, and they are making their position known. Amateur Radio Newsline's Mark Abramovich, NT3V, has been following developments and has more in this report:

--

To say American Radio Relay League President Jim Haynie W5JBP was disappointed with the FCC's decision to issue a Notice of Proposed Rulemaking on Broadband Over Powerlines might be an understatement.

Haynie sat in on the FCC's Feb. 12 meeting in Washington, D.C. and admits he was dumbfounded when many of the commissioners expressed excitement about the possibilities of BPL, ignoring interference concerns expressed by their technical staff.

"To have Commissioner (Kathleen) Abernathy come out in her initial speech that blew us away and her unbounded enthusiasm and then turn around at the hearing I attended and listen to Commissioner (Jonathan) Adelstein allude to unsubstantiated reports of interference and I was livid," Haynie says.

Haynie says the commissioners look more like cheerleaders for, than regulators of, the communications industry.

"It just seems to me though that the commission has gone from a regulatory agency to a Chamber of Commerce," Haynie says. "Their eagerness to implement this prior to the NTIA study rollout, which they actually have a letter from a congressman asking them to wait, seemed to me it was put on the fast track and try to beat the NTIA results."

Haynie says lots of what he heard about what's supposed to be in the NPRM does not bode well for amateur radio. But he says there are some burdens on the

electric utilities.

"They put a lot of constraints on the BPL industry," Haynie explains. "They have to react in real time, they have to be frequency agile. They have to have public web sites, they've got to have somebody on duty 24-7 to mitigate complaints of interference."

Ah, yes, interference. BPL proponents claim hams don't know what they're talking about.

"I've heard reports of some of the BPL industry spokesman who flat deny that there's a problem," Haynie says. "There never has been a problem, there can't be a problem. "In several interviews I've done with the regular press it was: 'Okay, go down a buy you a short-wave receiver at Radio Shack. Go down there and listen to it for yourself. I don't have to give you all these engineering data, you can hear it for yourself.'

"The utilities, they are being hand-held very carefully by the BPL industry and being told: "There's not a problem, there's not a problem.' "

Haynie says profit for the equipment manufacturers and the utilities is clearly the motive for BPL.

"Any CEO worth his salt who's running a power company is going to try to figure out more ways to get investment return for his investors," Haynie says. "He's got a grid there and if these salesmen come in and tell him: 'Well look, you know, we can bring you in an extra million dollars a day or million dollars a week for your power grid and it's not going to cost you anything other than just put these little devices on every quarter mile.' Why not?"

But Haynie says a recent Carnegie Mellon University study of the BPL business model identifies pitfalls.

"It would take 17 years for the recovery of the initial investment," Haynie says. "And that puzzled me until I read the article and it said because broadband is dropping, DSL dial-up is getting cheaper every month.

"Deals are coming out, Verizon's fixin' to come out with some more stuff. The old thing $30 a month is going to be high. And that's what BPL wants right now, $30 for a residential, $50 for a business."

Haynie accuses proponents of deception proponents in "selling" the concept. He says the claim it will finally connect rural areas of the country to high-speed internet access is, well, hogwash!

"We know that what the BPL industry wants to do is pick the low-hanging fruit, the high-density population areas," Haynie says. "But that's the selling point they're using on the (Capitol) Hill. And that's the selling point they use with the commission. I heard Chairman (Michael) Powell say that himself along with several of the other commissioners.

"They have been sold this bill of goods. And if anybody would stop and think about it, if it was such a good deal to serve five customers in a four-square-mile area, the DSL and the cable people would be doing it now."

Haynie says he's seen and heard criticism of ARRL, much of it declaring the League hasn't done enough to address the BPL threat.

"Let me assure you, we have done a lot, and we have talked to a lot of our potential allies," Haynie says."We've had one, in-face meeting in Washington. We do constant e-mails back and forth.

"But I am not going to, and the League is not going to, reveal all the things we're working on because that would be ridiculous to show the hand to the industry. Let them figure out what we're up to."

What can you do and where do Haynie and the League see this going? Tune in next week for part two of our interview with Jim Haynie W5JBP.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia

--

Can radio services including ham radio survive with the level of interference that many experts say BPL will create? We will look into this in future reports. (ARNewsline (tm))

**

WITH THE ARRL: THREE LONGTIME AWARDS DISCONTINUED

Meantime, the ARRL Awards Branch has discontinued three longtime awards programs. Gone are the Rag Chewer's Club, the Old Timer's Club and the Friendship Awards.

According to the ARRL Letter, the society’s Membership Services Manager Wayne Mills, N7NG, says that the number of amateurs applying for awards in general has declined significantly over the years, and interest in these three awards had slowed to a trickle.

Mills says that the awards programs eliminated had outlived their interest level. He adds that the cessation of the three awards is effective immediately. (ARRL)

**

RESTRUCTURING: NEW RULES FOR DANISH HAMS

More restructuring of ham radio is taking place around the world. This, as a set of new Amateur Radio regulations have been introduced in Denmark that make the nation code-free. Jeramy Boot, G4NJH, reports:

--

The Danish Information Technology and Telecom Agency has announced new regulations for radio amateurs in Denmark. The main feature of the new regulations is the elimination of the Morse code examination for access to the HF bands. Danish radio amateurs are also now allowed to use parts of the 4-meter band without a special permit. These are: 70.0125 to 70.0625, 70.0875 to 70.1125, 70.3125 to 70.3875 and 70.4125 to 70.4875MHz. Beacons are allowed in the 70.0125 to 70.0500MHz portion of the band. Detailed Danish 70MHz band

plans can be found on the Internet.

I’m G4NJH in Nottingham.
--

The new regulations came into effect on the 1st of February. (GB2RS)

**

RESTRUCTURING: CROATIAN HAMS GET NEW PRIVILEGES ON 40 METERS

Croatia has become the first country in Region 1 to benefit from the expansion of the 40-meter band agreed at the World Radio Conference in Switzerland last summer. 9 A prefix amateurs have also been given privileges at 70 and 3400MHz and now no longer have to pass a Morse code test for access to the HF bands.

New amateur radio regulations came into effect in Croatia on the 26th of December but have only recently been announced to the world. Since that date Croatian amateurs have been permitted to operate between 7100 and 7200 kilohertz on a Secondary basis, with a maximum power of 1000 watts P-E-P. This is in addition to the normal Region 1 allocation of 7000 to 7100 kilohertz.

On 4 meters, Croatian amateurs now have 70.000 to 70.450 MHz, with a power limit of 10 watts. They also gain a new band between 3400 and 3410 MHz, with a maximum permitted power of 150 watts.

And like so many other nations, the Morse code requirement for an H-F band access license has been dropped. Under the new regulations and there are now only two classes in Croatia. They are the full license and a beginners' ticket. (GB2RS)

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world Catalina Repeater Association system serving Los Angeles California from the island that’s 26 miles across the sea.

(5 sec pause here)

**

CONVENTIONS: HAMVENTION HOPES TO STAY IN DAYTON

Hamvention will probably stay in the Dayton Ohio area. This, according to the event’s General Chairman Gary Des Combes, N8EMO. In an interview with the Rain Report, Des Combes says that Dayton is the Hamvention’s home:

--

Des Combes: “My personal goal, and the goal of all of the volunteers is to maintain the show in Dayton Ohio. This is where it started and we would love to have it stay here. The plan we have no is to continue to go in that direction.”

--

How do planners intend to do this?

--

Des Combes: “What we need to do as a volunteer team is to work smarter, harder and more efficiently. Make the dollar ‘squeal’ so that the cost to the attendee and the flea-marketer and the exhibitors stay reasonable.”

--

What about the rumors of a move away from Dayton?

--

Des Combes: “There have been questions, quite frankly, from the exhibitors and others about wanting to move to newer and nicer facilities, but there are significant costs associated with that, and its our goal to keep this show a volunteer show because -- quite frankly -- we can do it better and more economically than if we went to a larger venue.”

--

Keeping the show in Dayton is only a small part of what Gary De Combes has to say about Hamvention 2004. Part one of the Rain interview with De Combes is on-line right now at www.rainreport.com and on the phone at 847-827-7246. Part 2 will be available on Friday, February 27th.

Hamvention 2004 takes place May 14, 15 and 16th at its traditional home at the Hara Arena in Dayton Ohio. (ARNewsline (tm), RAIN)

**

ENFORCEMENT: EX-KG6IRO DUE BACK TO COURT

I’m Bill Pasternak, WA6ITF, with a late breaking story. Dateline Los Angeles California where former ham Jack Gerritsen, the ex-KG6IRO is headed back to court. This time for a probation hearing and sentenceing on charges that he tresspassed on a federal instalation. Bur local hams haqve gotten themselves involved in the sentencing proceedure and are trying to convince Judge Carolyn Turchin of United States District Court to ban Gerritsen from owening or operarating any transmitting equipment -- of any sort -- during his probation period.

This action appears to be a grass-roots effort by repeater owner operators all across Southern California who believe that Gerritsen is responsible for interference to their systems. They are asking all of their users and other hams in the area to send a letter to Judge Turchin explaining the importance of quashing any source of interference that could cause problems during emergencies. They also want to let the judge know all about Gerritsen’s past record and have her order him to stay away from ham radio or any other two-way service as a restriction of his probation.

Judge Turchin has set Monday, February 23rd for the hearing. Will let you know the outcome in next weeks Amateur Radio Newsline report. (ARNewsline(tm))

**

RADIO EDUCATION: TEXAS HAM DONATES STATION TO SCHOOL

The San Angelo Texas Planning Commission has approved a 40 foot Amateur Radio tower for Santa Rita Elementary School. San Angelo businessman, Kenneth Gunther, W5ZJ, plans to donate the tower, a rotor, antenna's and radio equipment to the educational institution. The radio gear and antenna system will allow students to learn about telecommunications technology and earn their ham radio licenses.

W5ZJ, is the owner of Gunter Wholesale Electric Company. His donated tower will be erected inside the courtyard of the elementary school's main building. Plans for the 40 foot tower passed 6-1 after a motion to allow a 50 foot tower failed 4-3. (San Angelo Standard Times, WB5T)

**

RADIO GOOD-GUYS: COLORADO YOUTH RADIOS IN REPORT OF FOUND POLICE TWO-WAY

A Highlands Ranch, Colorado, teen appears to have done the right thing when he found a Denver police radio on Monday the 16th. Not sure what the unit was, he used it to let the police force know he had it.

The 13-year-old boy found the radio in the yard of a nearby home. This, after he saw it thrown from a sport utility vehicle. The unidentified youngster retrieved it, figured out how to turn it on and used the radio to tell a police dispatcher that he had it.

Denver police and Douglas County sheriff's officials were working to retrieve the radio. Officials say that they hadn't been notified that a radio was missing, and investigators were trying to determine who it belonged to. They are also looking into how this radio got out of the City and County of Denver.

The complete story is on-line at rockymountainnews.com/drmn/local/article/0,1299,DRMN_15_2660662,00.html (Rocky Mountain News, CGC)

**

ROAD RADIO SAFETY: STUDY FINDS LOTS OF IN-CAR DISTRACTIONS

Drivers are distracted 16.1 percent of the time their vehicles were moving and cellphones nor two-way radio is not the main culprit. This, according to a study conducted by the auto club and researchers at the University of North Carolina.

The investigation tracked 70 drivers from North Carolina and Pennsylvania. It found that Cellular telephones were not the major distraction. In fact only 30 percent of the subjects used a cell phone while their vehicle was moving compared with 97 percent who leaned over to reach for something and 91 percent who fiddled with the controls on their car’s entertainment system.

The study found all drivers fiddle with their radios or engage in other distracting behavior. This, even when they're being watched as part of a study on distracted drivers. (Science OnLine)

**

HAM RADIO BUSINESS: NEW FROM CREATIVE SERVICES SOFTWARE

Turning to ham radio business, Creative Services Software has announced that version 3.0 of Pacterm for Windows and P K term for Windows will be released later this year. Version 3.0 not only includes new sound card modes, but also an integrated logging program to keep track of QSO's, DXCC and even do light contesting. It will also support exporting to ADIF for use with the ARRL Logbook of the World and to other logging programs, provide radio and rotor control, and be able to sync with Packet Clusters that are connected by the Packet window. More information on Creative Services Software products can be found at www.cssincorp.com (CSS via VHF Reflector)

**

THE ELECTRONICS INDUSTRY: CES PREDICTS GOOD SALES IN 2004

The Consumer Electronics Association -- better known by the initials CES -- says that the wholesale electronics market in 2004 is likely to grow to 100 point 99 billion dollars in sales. That's up 5 percent over 2003 and a major improvement over three years of negative or minimal growth.

CES is a trade group representing audio, video and mobile electronics makers. It says that the U.S. consumer electronics market is seeing a sharp growth in video products, which has helped to offset the decline in stand-alone audio products and in-car consumer electronics. Sales of new technologies such as plasma television screens were expected to generate nearly $1.5 billion in revenues for 2003, nearly tripling from $515 million just one year earlier. Growth in consumer electronics last peaked in 2000, when sales rose 12.7 percent to $96.37 billion over 1999. (Adapted from CES release)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: LELAND SMITH, W5KL OF QCWA - S.K.

Some sad news to report QCWA President Emeritus Leland Smith, W5KL, has become a Silent Key. According to QCWA webmaster Bob Roske, N0UF, Smith passed away in his sleep the evening of February 15th.

In addition to being President Emeritus of QCWA, Smith served as Chairman of the organizations Scholarship Committee, was President of The Old-Old Timers Club and a member of The Society Of Wireless Pioneers. (QCWA)

**

CHANGING OF THE GUARD: RSGB PAST PRES. GEOFF STONE, G3FZL - S.K.

And word that Radio Society of Great Britain past president Geoff Stone, G3FZL, has also become a Silent Key. This following a long illness.

Stone served as the Society's President in 1964. The RSGB described him as a loyal servant of the Society, serving on Council and numerous boards including the VHF Committee. His funeral took place at on Wednesday, February 11th in South London. (RSGB)

**

HAM RADIO IN SPACE: AMSAT SAYS IT NEEDS $110,000 TO LAUNCH ECHO

AMSAT says that it urgently needs to raise $110,000 to help defray the launch of the Echo ham radio satellite. The bird is scheduled to ride into orbit thus coming June 29th, and the money has to be raided well before that date.

AMSAT like Amateur Radio Newsline is a federally recognized tax exempt 501(c)(3) organization, and your donation should be tax deductible in the United States. Information on how to support the Echo launch and other ham radio in space projects is on the web at www.amsat.org (AMSAT-NA)

**

HAM RADIO IN SPACE: U-O-SAT AT AGE 20

Meantime, there’s a big anniversary coming up for ham radio space operations. March 1st marks the 20th anniversary of the UO11 ham radio satellite on-orbit. We have more in this report:

--

On the 1st March the UO-11 ham radio satellite, which is also known as UOSAT 2 will have been in space for two decades. To mark the event, AMSAT-UK will be issuing a commemorative QSL card in exchange for listener reports from stations hearing the signals during the month of March. The reports must be made by way of the reporting page on the web site and the QSL card will be in the form of a downloadable "E-QSL".

By way of background, UO-11 was the second satellite to be launched by Martin Sweeting, G3YJO's, group at the University of Surrey in here in England. Its telemetry beacon can still be heard on 145.825 MHz FM using nothing more than a handheld 2 meter rig. There is also a 2401.5 MHz beacon but signal is not very strong and represents quite a challenge.

Depending on the status of the satellite, it sometimes goes into 'safe' mode, and the beacon transmitters are not activate for days at a time. Because of this, University of Surrey ground station controllers will attempt to maximise the number of days the transmitters are active during the month of March.

For the Amateur Radio Newsline, Rick Johnson, KA9VZD reporting.

--

An article and pictures about U O11 and the rules for filing reports are available on the AMSAT-UK website. Its in cyberspace at www.uk.amsat.org (AMSAT-UK)

**

RADIO IN SPACE: RADIO TELESCOPES DISCOVER NEW GALAXY

Using radio telescopes on Earth and another optical scope in space, a team of astrophysicists says it's detected a tiny galaxy that is the farthest known object from Earth. California Institute of Technology astronomer Richard Ellis says the galaxy is roughly 13 billion light-years from Earth. According to Science On Line, an expert at the Harvard-Smithsonian Center for Astrophysics in Massachusetts says the discovery gives a rare glimpse of the time when the first stars and galaxies began to emerge. (Science OnLine)

**

INTERNATIONAL - ISRAEL: A REPEATER FOR ALBANIA

Hagal International reports that the Israel Amateur Radio Club has donated a 2 meter repeater to Albania’s amateur radio society. Hopefully, by the time you read this it will be up and running in Tirana, which is Albania’s capital city. (Hagal International)

**

CONTEST CALENDAR: THE DIGITAL SKIRMISH

Turning to the contest calendar, "The Skirmish" - that’s the Troy Amateur Radio Association’s digital prefix contest, will be held on April 17. Categories include PSK31, PSK63, MFSK, RTTY, Packet, ASCII, SSTV and others with activity on 160 through 6 meters excluding the Warc bands. You can find additional information at www.n2ty.org/seasons/tara_seasons.html (Via E-Mail)

**

CONTEST CALENDAR: N3FTI FROM TURKS & CAICOS FOR ARRL DX CONTEST

Steve Kerns, N3FTI, says he will be on the island of Providenciales, Grid Square FL31 in the Turks & Caicos chain for this years ARRL World Wide DX Contest. During the contest, his group consisting of WE3C, KQ3V and himself will be active as VQ5A. This is the first time to Steve’s knowledge this prefix has been activated from the Turks and Caicos and the first time this prefix has been used by any station. During non-contest times listen for Steve operating as VP5 stroke N3FTI.

This contest runs for 48 hours from zero hours UTC on Saturday the 21st of February on all the contest bands between 160 and 10 meters. For more information the VQ5A operation, check www.qsl.net/n3fti on the world-wide-web (VHF Reflector)

**

DX

In D-X, word that LZ1ZF is celebrating his 35th anniversary of being on the amateur radio bands with the special callsign L35ZF. He is active on all bands and modes. until the 31st of December.

Also, SM0CCM will be active as J73CCM from Dominica through the 4th of March. He will operate on 160 to 6 meters mostly CW, with some RTTY and PSK 31. QSL as directed on the air.

And word that JA2EZD will be traveling in Vietnam and Cambodia through the end of the month. He plans to operate using the calls 3W2B and XU7AAA. Again, QSL as directed on the air.

And QSL Manager José of Jesus Moura Costa, PS8ET tells Amateur Radio Newsline that he has relocated. His new address is Q-25 C-17 Parque Piauí Teresina, PI. 64.025-100 Brazil South América

Lastly, 4X4SIX is an Israeli 6 meter beacon operating on 50.080 MHz. The team of 4X6ON and 4Z5AY built the 5 watt station which announces its call sign around the clock in Morse using a J-Pole antenna.

(Above from various DX sources)

**

THAT FINAL ITEM: THE LONG HAM RADIO WALK

And finally this week, the story of a long walk that’s taking ham radio with it. Jim Meachen, ZL2BHF reports:

--

Tony Whitaker, G3RKL, from Sheffield, in the United Kingdom is off to New Zealand for a short walk. Well not exactly a short walk. More like 750 miles as Whitaker treks from Invercargill to Blenheim, along State Highway 6 up the West Coast of the South Island. And he will operate an Amateur Radio station along the way.

Whitaker will be on the air using the special callsign ZL6SHS on H-F, V-H-F and U-H-F while actually walking. He also plans to use F-M simplex, Echolink and I-R-L-P Internet-linked repeaters in places where they are available. He will use them to keep in touch with his ham radio friends back home in the U-K.

Whitaker’s marathon walk starts in Invercargill on the 21st of February. If all goes to plan he is scheduled to arrive in Blenheim on the 8th of April -- probably a bit tired -- but very satisfied. We will keep you posted on his progress.

For the Amateur Radio Newsline down-under, I’m Jim Meachen, ZL2BHF.

--

This is not Whitaker’s fist long ham radio walk. He has already made seven others including one in Australia. (GB2RS)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the newly created Roy Neal, K6DUE, Amateur Radio Mentoring Project is up and operating. We already have signed up over two dozen hams who are willing to assist others. If you can help, or if you need assistance please drop a note with your name, address, hone number and area of expertise to mentor@arnewsline.org and we will get back to you as fast as we can.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Don Wilb anks, AE5DW, in New Orleans saying 73, Happy Mardi Gras and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2004. All rights reserved.

The words "...one nation, under God..." is neither a public prayer nor an oath to God (it isn't even an oath). The Pledge of Allegiance it is a pledge to one's own self. Therefore, it violates nothing in Jesus' Sermon on the Mount, Mike.

>
> Don't twist the subject, Jim.

It's not twisted at all. They know what it means and it doesn't bother them a bit.

>Did that same 95% of the adults you know
>also know that much of the food in our grocery stores, the foods we eat
>everyday, is prepared according to dietary laws of the Jewish religion?

Yes! And they have no problem with it. Not an issue.

>Were
>they aware of that tiny "K" symbol on many of those same food products?

Yes! And they have no problem with it. Not an issue.

>These are the things I talked about, not the meaning of a word.

They all go together. Most children I know, Jews and non-Jews, also understand the basic meanings of the words and symbols. We may not all know all the rituals and requirements, but we've got the basic idea. And it's not an issue.
>
>> And the problem is?

>
> You don't have a problem with the fact that a religious group is
>manipulating much of the foods we eat?

"Manipulating?" How? Which of the kosher rules do you find objectionable? Will eating something that satisfies a Jewish requirement somehow make me less of a Christian, or less of an American? Oy!

>There are very few things in this
>world as intrusive as that.

Then you'd better become a subsistence farmer, because all sorts of things are done to your food. And I hope you don't think that government food inspectors can do it all.

>Given a choice between this and the word "God"
>in a pledge, I'll choose the latter any day of the week.

Then let's do it this way:

On Sunday, we say "under God" for Christians
On Monday, we leave the word out, for atheists and agnostics
On Tuesday, we say "under Vishnu" for Hindus
On Wednesday, we say "under the gods" for pagans
On Thursday, we say "under He Who Is" for those who don't like to use His Name directly.
On Friday, we say (insert appropriate Arabic phrase here) for Muslims
On Saturday, we say (insert appropriate Hebrew phrase here) for Jews

They all mean the same thing (except for Monday) so why not?

>> I just checked the kitchen shelves. Prego
>> and Ragu tomato sauces aren't kosher.
>
> Those reading are free to look through their own kitchen shelves for
>examples.

Omigawrsh, Spam isn't kosher! Neither are bacon cheeseburgers! Or the lobster bisque, the bean with bacon soup, the alfredo sauce with the little meatballs...!!!
>
>> How is it hidden?

> By not asking the people of this country whether they even wanted their
>foods changed to conform to Jewish dietary law before doing so.

We're not asked about a lot of things. Nobody asked me if I wanted cars to have seat belts or that danged third pin on electric cords.

In fact, nobody asked me if I wanted my food inspected at all. How dare they!

>Through the
>use of a tiny, nondescript, "K" symbol instead of simply saying this product
>was prepared according to the dietary laws of the Jewish religion.

>By not
>making that "K" symbol known to the public through publications and other
>media. By downplaying the religious significance (by claiming it just means
>"good food") whenever the topic is broached publically.

Methinks you doth protest too much, Dwight.
>
>> That's because those groups don't have
>> dietary rules which require certification.
>
> True, Christians and Moslems don't have dietary rules which require
>certification.

Muslims do.

>But, by the same token, Jews don't have dietary rules which
>require the rest of the nation to eat the same things. If Jews have special
>dietary needs, let them have a small section of the store just like any
>other group wanting specialty foods.

The ghetto aisle, huh? Keep 'em in the back of the store, away from everybody
else.

Oh wait, let's get those Eye-Talian foods in their own special section too.
Linguini, zucchini...get all those "eenie" foods away! To say nothing of French
fries! Chili? Tacos? Hot and sour soup? Hey - what's this "lox" stuff?

>But nothing justifies the manipulation
>of mainstream food products to conform to the requirements of a specific
>religion in a country that has, at it's core, the concept that no single
>religion may dominate.

It's not manipulation. Any and all food processors choose whether or not to

> Tsk, tsk, Mark, you fail to note _sarcasm_ in the posting.

With you, who can tell? You never keep your own stories
straight, Lennie...How do you expect others to do it...?!?!

> Note some of the OTHER players in this zoo...emphasis on
> machismo ("be a real man and learn code"...etc.).

At elast SOME of us have SOME chance of BEING "machismo",
Lennie...Unlike yourself.

> Note the long-time name FISTS as an organization of code lovers
> with its close emotional attachment to machismo, strength, power
> and so forth embodied by "fists."

Or "fists", and in the colloquial term for a skilled hand on a
key, Lennie....?!?!

Naaaaawh. THAT would make SENSE!

> Thumbing through any collection of U.S. amateur radio magazines
> that have photographs of amateurs will reveal that U.S. amateurs
> are overwhelmingly male and white. For at least a half century.

Here we go again...Lennie, what's up with you and sexism and
racism? Can't find any VALID arguments so you play the "race" card?

> "Machismo" is a modified latino name for extreme maleness in
> the traditional male role of strength, power, fighting ability, and
> (to some) leadership of the tribe.

And so far YOU are the ONLY one making an issue of it, Lennie.

Me thinks you are trying to overcompensate for some other
"deficiency" in your personal life.

> I should apologize for the use of a latino label since, to us in the
> U.S. sunbelt (all states along the southern border), Spanish words
> and phrases are somewhat common in our version of English. I
> don't believe that is true in Australia or New Zealand or even the

> UK where modified English is also spoken.

What you SHOULD apologize for, Lennie, is your habitual lying,
antagonism, and cruel and selfish behaviour...

> The "tribe" aspect shouldn't be overlooked since there is some
> extreme polarization on the issue and the fight-to-the-death
> attitude of olde-tymers demanding strict and utter adherence to
> to the glorious and noble ways of Their youth. Everyone MUST
> do as They did or not be considered as "real" as They are.

The "must do as we did" thing has been disproven over and over,
yet you continue to try and envoke it, Lennie.

Why? Do you ENJOY being made a fool of?

> Note the comment of Brian Burke in this thread. He notes that it
> seems perfectly permissible for any FISTS member to denounce
> NCI at any time, yet the converse is not possible. Hypocrisy
> in clear evidence, the one-sided fight-to-the-death attitude in full
> fury by the code lovers.

Another misdirected twisting of the truth...but hey...What's one
more amongst the hundreds of others, eh...?!?!

> I find it curiously odd that the mighty male morseman legions of
> FISTS be headed by Nancy Kott, clearly a female in photographs.

Clearly a female in person, too. And you'd get a chance to KNOW
that if you were a licensed, ACTIVE Amateur Radio operator,
Lennie...Ms Kott makes it to several of teh alrger events every year.

> Of course, again from my geographical vantage point in the middle
> of the movie mecca, Los Angeles, here there be experts in make-
> up. Who knows what ever lurks behind the "front panel?"

Or who know's what evil lurks on Lanark...?!?!

WE DO... ! ! ! !

that
| >what one is saying. And if that is bad, one has to "pay" for that bad
| >behavior. Like Larry. It is not to supress his opinion or the
disagreement,
| >it is the words and the soul and the bad spirit coming out of his lines.
The
| >way he acts here on Usenet against other HAMS shows how he is acting on
the
| >bands.
|
| Helmut:
|
| Very interesting. I find it quite extraordinary that you are able to
gauge my
| behavior on the bands by what you read from me on Usenet. In reality, my
| on-the-air behavior is probably very much like your own, assuming that you
| are friendly, courteous, and helpful to your fellow hams.

so why do you spit out thinks like:

[quote] All of which confirms my long-held opinion that no-coders
are mainly liberal, socialist, Communist sympathizers who hate America
and want to weaken us by reducing all standards in our society, thus
making us just another Third World nation. How charming. [quote ends]

against other fellow hams.

| >This makes not the best image of an american ham, on a newsgroup
| >which is read throughout the world. It damages the reputation of Amateur
| >Radio. Period.
|
| I think that far worse damage is done by making rash, totally blind
judgments
| which, in any other forum, would be legally actionable as libelous.

Larry, it was you, who posted:

[quote] All of which confirms my long-held opinion that no-coders
are mainly liberal, socialist, Communist sympathizers who hate America
and want to weaken us by reducing all standards in our society, thus
making us just another Third World nation. How charming. [quote ends]

| As for you, my friend, I am pleased to advise you that I do not use your
| behavior on Usenet as a means of judging your on-the-air behavior as a
| radio amateur, because I have not personally experienced the latter.
| However, as a Usenet participant, I must say that you seem to have the
| typical shoot-from-the-hip attitude down pat. Nothing new here.

Again, Larry, the initial qoute I've refered to, was your bucket full of
blind agression, you spilled over all no-coders in the world. You did not
specify any nationality. Even then, it would have been unacceptable
behavior, which allows the conclusion, your behavior against nocoders on the
air is conducted alike.

A Liberal is a person who uses other people's money to assuage
his own guilt.
A Socialist is a person who views government as the ultimate alternative
to his own ingenuity and initiative.

>Whom would you call a Communist? Namely!

Anyone who seeks to place the government in the position of being the
ultimate power over the people.

Larry, your definition describes any dictatorship, democracy and kingdom as
well

Marx,
Though he inspired communism, he was a true sozialist himself

Lenin, Stalin, Kruschev, Ho Chi Ming,
they are all outdated, sk.

Kim Sung Il,
yes, he is leading North Corea the old fashioned communistic way.

You were writing of things you dont now about. Assumably, while your time in
Germany, you did not have much time to watch the "normal life" in the
country you were living in for a certain periode of time. Otherwise you've
had learned what the Liberal, the Sozialist, the Christian and the Communist
Parties are standing for and what they are pledging for.

According to your initial post: [shortquote]are mainly liberal, socialist,
Communist sympathizers who hate America
and want to weaken us by reducing all standards [shortquote ends]
all CW-tested-Hams must be supporting Democrats ,Republicans, and Cristian
Parties.

But this is not a political forum, and what anyone is thinking politically,
has nothing to do with HAM Radio.

In all the respect for the american freedom of speech, and your right to express it here, Larry, the whole initial statment of you is not to be made of a ham. You know the Ham Rules? As you are a member of different HAM organizations, I am sure you do. Instead of writing such rubbish about other fellow hams, even when they are underpreveleged in comparishion to you, why aren't you reaching out, give them a supporting "hand" and haul them over to your side of the street? Because they don't want to practice your favourite kind of game?

Larry, dont be jealous! If someone gets a gift, like on Valentines Day, and you dont, do you cry out loud: "Dont give it to him, I did not get one ever!"? To be jealous about things other get, is worth a child.

Larry, it is not worth to argue about things you cannot refrain from beeing ruled from the authorities. It is weakening your heart, and your mind. Stay strong, and take the things as they will come. Stay calm, it is not worth to be angry about anything which is out of our reach to lead it in any direction.

There were so many paragraphs in your previous postings, I hope I answered all of them in good courtesy. If I forgot some, you will remind me.

Bis Bald, Servus, Tschuess

HAR! The method of preparation is a matter of exclusions, not
inclusions, with the exception of the salt sometimes put on chicken. You
speak as if the practice involves putting stuff into the food. It does not.

>>I just checked the kitchen shelves. Prego

Dwight, you are way off base here. There is no coercion here except
that there is a market that won't buy food items unless they have been
prepared a certain way. That method of preparation is so innocuous and
doesn't add much expense at all, so many if not most manufacturers are
willing and happy enough to do it.

> Through the
> use of a tiny, nondescript, "K" symbol instead of simply saying this product

> media. By downplaying the religious significance (by claiming it just means
> "good food") whenever the topic is broached publically.

Sigh... there is no actual religious significance to the food, other
than that there are some people who attach some to it. Eating Kosher
food does not make me Jewish, just the same as if I refused to touch
alcohol it would not make me Baptist.

>>That's because those groups don't have
>>dietary rules which require certification.
>
>
>
> True, Christians and Moslems don't have dietary rules which require

Wrong! There are Moslems that do have dietary restrictions, and Many
Christian churches forbid alcohol consumption.

> But, by the same token, Jews don't have dietary rules which
> require the rest of the nation to eat the same things.

No they don't.

> If Jews have special
> dietary needs, let them have a small section of the store just like any
> other group wanting specialty foods.

Actually, they do. There are certain foods that for one reason or the
other are niche foods, such as Gefilte fish. Those are in specialty
sections.

> But nothing justifies the manipulation
> of mainstream food products to conform to the requirements of a specific
> religion in a country that has, at it's core, the concept that no single
> religion may dominate.

Do you really think this Dwight?

A food company sets up a production line. Most companies want to sell
as much as possible. Some small portion of consumers have some specific
guidelines regarding food preparations, many of which are good sanitary
practice. Is is more economical to make two production lines, one which
is Kosher, and one which is not? This being especially the case where
there is no identifiable difference in the products? (while some
products have a definite taste difference, like poultry, others are
identical)

It makes no economical sense, and most people consider it a positive
thing anyway. You are in a major minority here.

>>Brings in the $$.
>
>
>
> If Kosher truly brings in the money, why not advertise it directly instead
> of hiding it under a tiny, nondescript, "K" at the bottom of a product
> label? Clearly, the claim that it increases profit is somewhat suspect.

Because they are being discreet. People like you get upset about such
things. But you do know how to find the difference, so just eat things
that don't have the little K on them. BTW, you might also want to avoid
"pareve" marked foods also. Not *necessarily* Kosher, but do you want to
take the chance?

Perhaps this is the chance for you to make some money here. You could
start a food chain called "Stewart's Non-Kosher Foods"! 8^)

You know, Len, when you want to talk Army radio, its considered
completely irrelevant. Its just NOT Amateur Radio!

When TAFKARJ wants to talk Army radio, it is wholesome and wunnerful,
and has everything to do with amateur radio somehow, even though
amateur radio was OUTLAWED at the time he speaks of.

I don't think these guys are complete fools, but there edging their
way over.

billy

It was $1.58.99 this morning. This afternoon it is $1.78.99.
Probably be back to $1.58.99 by Wednesday. I'll keep you posted.

Um, Mike, there's more to it than that....

Below is a rough (very, very rough!) translation of Helmut's entire
message in this thread. (thanks to our friends at Babel Fish for
helping with this one.....http://world.altavista.com/)

>>>>>>>>>>>>>>>>>>>>>>>>

Hello Ralph,

If you have not yet noticed, here in the group almost only
the idiots write? American egoists believe they are the navel of the
world. Why if it goes everywhere, otherwise, in the world without this
dopey Morse discussion freely from problems above the stage?

Apart from the fact that the American radio friends have the support
of their national security organizations like FEMA and Homeland
Security, Nationwide Huricane Center or similar groups, they try a
national American ham radio club (which, by the way, only approx. 20%
the radio hams in America are members) without any legs to stand on.
Have a look at our example at Linz, there the Red Cross complaints
added an official side to it. And the countercomplaint of the PLC -
operator must be waited for first, for its outcome.

In any case, it is very amusing to read here, I an sometimes surprised
a little bit, that people with zero education can generally acquire a
license. They don't know much outside their own fence posts.
Nevertheless actually believe, their soldiers die in the Iraq for the
oil, so that they can refuel more cheaply. (See EXXON + Mobil Thread).

Nice day still and 73

I've observed no one here defining himself in that manner. What we're
left with is YOU defining someone in that manner.

> Some radio amateurs are so self-defined as to be superior to any and
> all radio professionals.

I've observed no one here defining himself in that manner. What we have
is just YOU defining someone in that manner.

> Some radio amateurs are - by public display - arrogant control freaks
> who like to imagine they prey on ordinary civilians.

You seem to have a problem with anyone who has achieved something you
have not. You've surely memorized that N2EY of your likely actions by
now.
All hams are simply ordinary citizens who've passed an amateur radio
license exam. You aren't one of them.

> So far you are batting 3 for 3. Well done. Not rare.

I submit that you don't know one end of a bat (baseball-type or the
mammal) from the other.

Careful about those emotionally-loaded words, next thing you know
we will have another Sermon On The Antenna Mount about the
glory and the majesty of morse code.

Washington Army Radio (WAR) had as much to do with amateur
radio as ham-astronauts got into spaceflight through ham radio. :-)

>I don't think these guys are complete fools, but there edging their
>way over.

Not fools in the true sense. They are just BELIEVERS in the
Church of St. Hiram. None of them had anything to do with Army
radio and so they grasp at idolized imagination straws trying to
promote morse code and the old ways. If they find some scrap
of information that supports their evangelism, they will want to
scrap with anyone about it and its veracity. :-)

IOW, the only govt. involvement is the avoidance of fraud (claiming something
is what it isn't).
>

Separation of church and state. What a concept!

Special note to Dwight: The terms "push", "manipulate", "tamper" and "literally force down the throats" simply don't apply to kosher certification in any way that I can see. It's totally voluntary, driven by free market forces.

The choice of words in a public pledge is a completely different matter.

The fact is that some Christians do, indeed, find the use of His name in
pledges and oaths to be offensive. Some have gotten into a lot of legal hot
water because they wouldn't put their hand on a Bible and swear to Him that
they were telling the truth or would do this or that.

What is surreal about the whole issue is that it was usually one flavor of
Christian telling another flavor of Christian what to do, and often doing it in
the name of the One they supposedly follow.

>>>I'd estimate that over 95% of the adults I

>start a food chain called "Stewart's Non-Kosher Foods"! 8^)
>
Even though I'm not catholic anymore I have a confession to make.....

For supper tonight I made.....tacos. But no beer.

Ingredients used:

Lettuce and onions (kosherness of fresh vegetables assumed but unknown)
Acme Monterey jack cheese (not marked)
Acme Taco seasoning mix (not marked)
Ortega Taco sauce (marked with a K)
Ortega taco shells (not marked)
Empire Kosher ground turkey (it was 80 cents a pound cheaper than Perdue,
fresher, less fat and tastes better. And it was right there next to the other
"mainstream" poultry products!)

So in my house we had a Christian, who is also a second generation American of
Italian descent, making a Mexican dinner with some kosher and some nonkosher
ingredients. They were really good tacos, too.

btw, gefilte fish is really really good. It is an "inverse" food - its taste is
inversely proportional to how it looks. I ate some on a dare and then I
couldn't get enough of the stuff.

<elektros@yahoo.com> writes:

>it is bizarre to greet
>the end of the code requirement by suggesting a new licence with a code
>test.

Why?

The revised treaty says that each country shall determine for itself what the code test requirements for an amateur license will be. It appears that South Africa is in the process of determining what it shall be for South Africa. Perhaps there will be no test, or no change, or something in between.
>
>And Jim, I didn't say it was a bad idea to have a dual track system with
>code and theory alternatives. It's actually quite a good one. No doubt now
>someone will put that in petition number 18, or whatever number we are up
>to now.

I first suggested such a thing several years ago in my "Chinese Menu" license concept. The idea was that there would be a "core" test requirement for the lowest level of license, and upgrading could be accomplished by accumulating credits in a variety of ways, such as specialized written tests, and code tests.
>
>I won't though, because it isn't going to happen.

Why not? Nobody has suggested it yet in the USA because in the past it would have violated the treaty to have an HF license with no code test. Now it could be done.

And we can refer those who do indeed find it as a public prayer or an oath or a pledge to God to you for reassurance?

The fact that we discuss this from two different views shows that you are not right about this one.

If a person *thinks* it is an oath to God, then it *is* one. Lots of those people who think it is an oath are Christians.

The people that started the court ruling process about the prayers at football games in Texas were not atheists. They wer Christians that didn't like the flavor of prayer being said.

And finally, I have great faith that it does indeed violate Jesus' sermon on the mount. YMMV.

In light of other recent threads regarding Universal Radio and my own post, I must say "fair dues" to Universal Radio. Called today to cancel my backorder for a Sony AN-LP1 (not Universal's fault... Sony is just too busy building flat screen TV's), only to be told my order shipped today. The person I spoke with said they received only 10 units. My hat's off to UR!

He has the option of taking the no-code exam and I have every confidence that he could pass it. He won't though, as if he's really showing us by denying himself the license. It won't effect me one way or the other if Leonard Anderson never obtains an amateur radio license.

> With all due respect, Dwight, you should
> meet a wider variety of Christians. And
> check out Matthew 4:33-37.

With all due respect, Jim, I've met plenty, thank you. Regardless, I think you meant to say Matthew Chapter 5, not Chapter 4. There is nothing in Chapter 4 relating to anything we're talking about. Therefore, Matthew Chapter 5:33-37:

33: Again, ye have heard that it hath been
said by them of old time, Thou shalt not
forswear thyself, but shalt perform unto the
Lord thine oaths:
34: But I say unto you, Swear not at all;
neither by heaven; for it is God's throne:
35: Nor by the earth; for it is his footstool:
neither by Jerusalem; for it is the city of
the great King.
36: Neither shalt thou swear by thy head,
because thou canst not make one hair white
or black.
37: But let your communication be, Yea, yea;
Nay, nay: for whatsoever is more than these
cometh of evil.

Since the Pledge of Allegiance, or the words "...one nation, under God...," is not an oath given to others, but simply a pledge to one's own self, there is no contridiction with anything written above.

By the way, the comma following "Christian" in what I wrote earlier (quoted at the top of this page) was meant to be placed before that word (as in "...the first, and only, Christain I've..."). Just wanted to clarify that before someone objected.

> "Manipulating?" How? Which of the kosher
> rules do you find objectionable? Will eating
> something that satisfies a Jewish requirement
> somehow make me less of a Christian, or

> less of an American? Oy!

What I object to, Jim, is a religion, ANY religion, pushing to modify what we eat in this country to comform to their own religious beliefs and doing so in a somewhat less than forthright manner. I do not wish to live under the dietary rules of the Jewish religion, or the dietary rules of any other religion. But that is must certainly happening today. Jews refuse to eat pork. As a result, pork hot dogs, a tradition in this country for many decades, is being replaced with foul tasting "turkey" or "beef" hot dogs. Pork chops, another staple in this country for many years, have virtually disappeared from resturant menus. Ham, another favorite for many years, has also virtually disappeared from those same resturant menus. Based on the efforts to establish Kosher as the standard on grocery stores shelves, only a fool would think the decline in availability of all this food and the Jewish refusal to eat pork were just a mere coincidence.

> Methinks you doth protest too much, Dwight.

And I think you are defending all this too much, Jim. Why? Regardless, that is all I have to say about this. This is not a safe subject to speak out too loudly about.

> would do this or that. (snip)

Once again, you've got it wrong, Jim. They were not asked to "swear to Him." The phrase in question went like this...

"I swear to tell the truth, the whole
truth, and nothing but the truth, so
help me God."

The words "...so help me God" were a request for God's help to tell the truth. The Bible was used because it was believed few would not tell the truth in the presence of such a symbol of their faith. The main objection was that the words might be considered a public prayer for God's help. Of course, only a very few Christians objected under this grounds - most have no problem with either public prayer or telling the truth. Instead, the vast majority of those who objected were non-christians who were "offended" by the word "God" and the use of a Bible. The practice ended when conventional thinking decided a person who does not believe in God or the Bible would not be influenced by either.

No, I would suggest you refer them to their own church leaders. I'm sure
they will be glad to answer their religious concerns.

> The fact that we discuss this from two
> different views shows that you are not right
> about this one. (snip)

No, Mike, it simply shows you don't understand the "Pledge" of Allegiance.
This can be addressed by the casual use of a dictionary (a pledge is a
pledge, not an oath or public prayer).

Hardly an urban legend, Jim. From the Kof-K Kosher Supervision website (www.gokosher.net/Requirements.htm)...

"What are the requirements to certify a
product Kosher?" (snip)

"The animal must be slaughtered by a
certified, trained Rabbi using a knife
that has been specially sharpened and
honed."

> Special note to Dwight: The terms "push",

3267. Michael Powell in a bra - really

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-28 10:36:44 UTC
From: johnbartley@email.com
Message-ID: <f90c7f43.0402280236.3c3c3ff3@posting.google.com>
Source record: 88043

Yes, Michael Powell in a bra.

Some telecom or computer magazine I've read within the past week had a B&W pic of the Chair of the FCC in a bra. I'd heard he wore it at some stag event, and wasn't surprised when I saw it; just trashed the magazine, and forgot about it.

Now, I've read the Notice of Rulemaking for BPL (internet service over power lines), and need that picture, because there's nothing like sophomoric humor on the part of Powell to illustrate the cavalier way the FCC is approaching the issue.

What issue?

Go set your tune your hi-fi to AM, pick a spot between local stations, and turn up the vpolume about half way. Then, try to have a phone conversation over a bad cellular connection with your ear six inches from the speakers, and you will still have an easier time communicating than hams will when we experience the 16 db over S9 interference already demonstrated by BPL.

That interference explains why Austria and Japan already tried, then abandoned, BPL. However, this is 'the best government which lobbyist money can buy', so we get the FCC telling us in the Notice they expect power companies to fix the problems, the same power companies who already take *months* to resolve RFI (radio frequency interference) problems with existing tech.

The burden of proof of the problem will be on the *ham*. How easy is it to talk to your power company? Hams know it gets much harder when interference problems arise.

Hams have to buy all of our own gear to equip ourselves to be able to communicate in emergencies, and we're a part of just about every emergency plan there is.

How many hams will learn the special skills needed for shortwave and longwave and make the investment of $$$$ to buy the gear, if all we get is static from BPL? You have to practice just like it's for real to be competent in something so demanding as passing radio traffic, and longwave & shortwave require very different skills than the VHF and UHF short-range frequencies which are unaffected by BPL.

Folks, I need this pic to help me prove my point. Anyone remember what magazine that picture was in?

Thanks, 73s and best regards,

Why? Nothing they were doing violated any aspect
of Part 97. If the lack of knowledge on the part of others
isn't creating illegal operation, then I don't care if they
forgot everything they had to learn, memorize or guess
to pass the tests to become a ham. I guess it would
really bother you too to know that I couldn't send/recieve
at 13wpm today if my life depended on it...even though
I once passed the 13 wpm test.
```

I find your unwillingness to accept anything but "the official
way to speak on the repeater according to you" to be
pathetic too. It;s not at all different than setting up a
"ham radio politically correct" speech requirement.

> > You may

> Apparently nothing....in your view.

True...but what do YOU consider there to be wrong in
such an on-the-air exchange? Would I be correct in
thinking you believe that asking hubby to pick-up bread
and milk is bad operating or, should be illegal?

> > I'll be very surprised if any of the three will be active on the

> >
> > Which is perfectly OK.
>
> Aren't you going to ask "By whose authority"?

Not at all. No one, not you, me or anyone has any
obligation to answer him when he calls. Since there's no
mandated response to a call of CQ or XXX monitoring
in Part 97, then you could say that the FCC by default
authorizes everyone to ignore anyone they want.

Because, TAFKARJ, the country already has coded licenses. And they've
had since 1912 to perfect them. Now its time for them to try
something new and different, but instead they get more of the same.
Can't think outside the box.

As do Muslims. You statement smacks of ignorance

As a result, pork hot dogs, a tradition in this country for many
> decades, is being replaced with foul tasting "turkey" or "beef" hot dogs.

Paging Hal Turner..you have another convert waiting to inducted.

Foul Tasting turkey dogs were a product of people who wanted to eat
something other than meat. It's a vegetarian dog. And all beef dogs
are made because the people at Swift Meat Packing use the parts of the
hog that are left over from processing. It has nothing to do with
dietarty laws.

> Pork chops, another staple in this country for many years, have virtually
> disappeared from resturant menus.

????? Where do you live. Every resturaunt, every Diner, every B-B-QUE
place has pork chops. TGI FRidays has pork chops. OutBack Steak House
has pork chops (and damn good ones at that)

Ham, another favorite for many years, has
> also virtually disappeared from those same resturant menus.

You must not go out for breakfast much. There isn't a resturant around
that doesn't serve ham or ham or bacon (Oh you forgot bacon) as part of
a breakfast meal. Excuse you..your ignornace is showing

Funny for someone who lives in Mrylte Beach, you'd think there were lots
of restuarants to serve the tourists. Guess not.

Based on the
> efforts to establish Kosher as the standard on grocery stores shelves, only
> a fool would think the decline in availability of all this food and the

Thast called Glatt Kosher and is available only in special meat markets.
Its' not used for the type of shopping you do Dwight. General Kosher
items are certified based on cleanliness and preparation. Nioce try,
but once again, that bar goes up and you go under

Try this website Dwight, I think you'll fit in very well. This mental
migdget shares similar concepts

It's funny, but because of RedNecks similar in thought to people such as
yourself, there's not grits being served in resturants. I know they
aren't available in supermarkets, even in the Red Neck Cracker aisle

Funny how at Christmas time Chinese resturaunts are full, selling ham
and pork and Seafood. Why in act Dwight there are 20 Chinese resturants
along the Strip in Myrtle Beach alone. Funny how rants are always prven
wrong

>
>
> > Methinks you doth protest too much, Dwight.

methinks he speaks not what he knows but what believes he knows

Ya'll think Jeff Foxworthy was thinking of this guy when he started his
Red Neck routine

I agree with JJ...Lennie Anderson's personal apparatus is
insufficient to get him licensed to operate Amateur Radio apparatus,
so why worry about it.

Even if he did get a ticket, I am willing to bet he'd take that
"I Know Better Than You" attitude to the local repeaters only to find
his coax the target of every knitting needle in Los Angeles County.
He's certainly set the tone here...

Actually, Scummy, WAR has played host to actual licensed Amateurs
as "guest operators" on more than one occassion over it's several
decade history.

Also, if you really knew as much about the space program as you
allude, you'd know that at least two Astronauts have credited Amateur
Radio as thier "intro" to technology in grade school and subsequent
career path to engineering.

Too bad your career path in engineering wasn't sufficient to
prepare you for licensure in Amateur Radio. Maybe a licensing course
at a local middle school...?!?!

If it isn't a pledge or an oath or whatever to God, then no one should
have a problem with either it's removal or inclusion.

A pity that Dwight Eisenhower had it wrong too!

> and West Chester, etc.

There's an optics cable running along the street here which isn't more
than 75 feet from me as I peck at the keyboard. And a half block north
there's a moose-sized optics cable running along MacDade Blvd. I have
no idea where they come from or where they go or what they actually do
but there isn't a drop to a residence or a business in sight anywhere.
I've seen Ma Bell "mobile labs" futzing with the things so I guess
it's for running phone comms between switching centers. Or something.
In any event these cables don't look like they're ready to duke it out
with BPL.

> The really big cost is getting from the pole into people's houses. That's the

> The cable and telco folks took their pain upfront.

And they can avoid more pain by *not* installing residential drops.
Install 802 dot somthing boxes on the poles every hundred yards or so.
Would work and would kick BPLs butt. The huge advantage wireless
devices bring to this game is that they do *not* need a connection to
the house wiring. Freely floating lappers, remotes, etc.

> >Hare and I touched on that when he was here, it's a classic case of

Seems like we all forgot that most of it is satellite ops which do not
always use directional antennas. That could be a problem but a couple
MHZ wide AMSAT setaside would probably work.

Yeah and after RCN drubbed him Mr. Allen came out with 20 point
somthing billion left in his piggy bank. Pore thing. He and his buddy
Bill are tossing coin at all sortsa wild investment adventures. Their
baby airliner is a good example. They don't care, it's only money.

The UAs been doing that for thirty years.

> With all due respect, Jim, I've met plenty, thank you.

It's not about the number, it's about the variety. If I'm the first Christian you know of who objects to the use of His name in the pledge and in oaths, you simply don't know a wide variety of Christians.

>Regardless, I think
>you meant to say Matthew Chapter 5, not Chapter 4.

You are correct! Typo on my part.

> or black.
> 37: But let your communication be, Yea, yea;
> Nay, nay: for whatsoever is more than these
> cometh of evil.

Exactly! "for whatsoever is more than these cometh of evil."

That means we should simply tell the truth and not get all involved in mucking about with oaths and pledges and such.

"Swear not at all"

> Since the Pledge of Allegiance, or the words "...one nation, under
>God...," is not an oath given to others, but simply a pledge to one's own
>self, there is no contridiction with anything written above.

It's a public pledge that includes some words that some people find objectionable.
>
> By the way, the comma following "Christian" in what I wrote earlier
>(quoted at the top of this page) was meant to be placed before that word (as
>in "...the first, and only, Christain I've..."). Just wanted to clarify that
>before someone objected.

If I'm the first and only, then my recommendation that you get to know a wider variety of Christians is a good one. I would add that you should get to know more Jews, too.

You might be able to explain it better than their leaders!

Found more of the qoute from President Eisenhower:

>>> In this way we are reaffirming the transcendence of religious faith
>>>in America's heritage and future; in this way we shall constantly
>>>strengthen those spiritual weapons which forever will be our
>>>country's most powerful resource in peace and war."

The American Family Association has an online campaign they call
StopLiberalJudges.com (strange it isn't an .org)

http://www.stopliberaljudges.com/default.asp

There is still a logical disconnect in here. If it isn't a prayer or
pledge, there should be no problem with either its inclusion or removal.

But since it was the intention of the people who originally made the
change to "reaffirm the transcendance of religious faith", and that the
sponsors of Bill S1558 are trying to exempt the POA, National Motto, and
the Ten commandments from any review as to their legality, you have a
hard time proving your position.

Interestingly enough, their website states that they don't want liberal judges to rule on it. Apparently conservative judges making rulings on it are okay! ;^)

You might want to get on contact with your Senators to get them working on this.

>>The fact that we discuss this from two
>>different views shows that you are not right
>>about this one. (snip)
>
>
>
> No, Mike, it simply shows you don't understand the "Pledge" of Allegiance.
> This can be addressed by the casual use of a dictionary (a pledge is a
> pledge, not an oath or public prayer).

Dwight Eisenhower himself says it is a reaffirmation of faith.

Encyclopedia Britannica says an affirmation is:

in law, a promise by a witness concerning testimony allowed in place of an oath to those who cannot, because of conscience, swear an oath. For example, members of the Society of Friends (Quakers), ...

American Heratige dictionary:

The act of affirming or the state of being affirmed; assertion. 2. Something declared to be true; a positive statement or judgment. 3. Law A solemn declaration given...

Rogets Thesaurus synonyms In case you don't want to use that nasty legal term above:

affidavit, assertion, asseveration, attestation, averment, avouchment, avowal, certification, confirmation, declaration, green light, oath, OK, pronouncement, ratification, statement, sworn statement, testimony.

Do you presume to know more about this that the person that sponsored the rewrite?

Perhaps you want it kept in there because you simply *want* it in there? That's an argument I can accept.

Golf is a hobby not a service. Why
ham-radio is a "service" ? All hams
dont want to be considered as a public
service. Everybody has not the military
spirit.
Lets them choose ! Suppress amateur
radio as a service in ITU rules. To be
considered as a service has many
drawbacks for the ham rights, you
are always dependent of what a
governement wants. Does the governement
has any influence on how you want to
play golf ?
No, you can play in the manner you want.
So let the hams vote if they want to
continue to be a service. The answer is
evident, they will vote for FREEDOM.

So act for "NO SERVICE INTERNATIONAL" !

being a 'service' also has its advantages. would golfers be listened to at all if BPL were going to take away their 'right' to play golf? would hobbyists be asked to help in time of emergency, or be ordered off the air? if big business wanted one of our bands and all we did was hunt dx and ragchew and didn't have a history of service to the country would the government think twice about taking their money for it? as long as we remain a service and at least some of us do what we can to help then all reap the rewards... I move we get rid of the freeloaders, if you don't do so many hours of 'service' every year you lose your license! how about them apples! Of course that won't happen as the administration of it would be expensive and complicated. so crawl back in your hole and accept the paper title of the 'service' and just do what you want anyway.

Question, Brain...

I have never seen Jim Miccolis refer to you as anything but
"Brian"...

So WHY do YOU inisist on following the insulting and demeaning
example of a known pathological liar and antagonist in engaging in any
interaction with him...?!?!

Are you, after all, as shallow and immature as I thought you
really are?

Please give some specific example of how Jim has belittled or
demeaned YOU in a like manner...

> > >This has been shelved, due to what they say were a large number of
> > >comments.
> >
> > Democracy in action.
>
> You almost got it right. Should be "Democracy inaction."

As the otehr post suggested...You can either get to the higher
class license by progressing up a Code ladder or a theory ladder.

Why is that "inaction"...?!?!

> > Sounds like a very reasonable compromise.
>
> Then why did they initially suggest a third coded license? Why did

> that generate a "large number of comments?"

To introduce a pathway to the higher license. Shall I draw you a
map?

> > >If South Africa does
> > >implement it, they will be the first and probably only country to do so.

> As do Muslims. You statement smacks of ignorance

I'm going to weigh in just once on this thread.
Steve is correct, but it really makes NO difference
what anyone wants...in the end, it is the marketplace
that drives what is or is not available. If private companies want
to cater to particular dietary requirements, they are free to do
so without government interference. In the end, again,
it will be the profit incentive that drives the availability.

> As a result, pork hot dogs, a tradition in this country for many
> > decades, is being replaced with foul tasting "turkey" or "beef" hot
dogs.

Last time I checked, they were readily available in my
local A&P, Shopright or whatever. If they aren't available
in a particular local, ask the store to stock them. If you do,
they may answer that they dropped the product because
it didn't sell. That's basic marketing and economics 101.

> Paging Hal Turner..you have another convert waiting to inducted.

I agree 100%.

> > Pork chops, another staple in this country for many years, have
virtually
> > disappeared from resturant menus.

Probably because they didn't sell to the patrons. Back to
marketing and eco 101.

> ????? Where do you live. Every resturaunt, every Diner, every B-B-QUE

Well I think Myrtle Beach does shut down a great deal between
the end of October and the start of the spring season but I can't believe
there is a total lack of pork products there.

> Based on the
> > efforts to establish Kosher as the standard on grocery stores shelves,

Let's assume this guy is right as to cause...the reality, is still
drven by $$$$. The stores won't just do this or that because
some religious group wants certain products or opposes others.

Cheers,
Bill K2UNK

It is a service because that is how it is defined and
authorized under FCC rules Part 97.

> All hams dont want to be considered as a public
> service. Everybody has not the military
> spirit. Let Them choose!

There is nothing to choose. It is a service.
In actual day-to-day activity, the fact that
ham radio is a service still allows individuals
to be hams on nothing more than a personal
hobby basis.

> Suppress amateur
> radio as a service in ITU rules. To be
> considered as a service has many

> has any influence on how you want to
> play golf ?

The government will ALWAYS have a say in ham radio
because the radio spectrum is not a privatlely owned
resource. Under US law and under the laws of
most countries, the government (the FCC in the USA)
gets to specify the rules for amateur radio.

> No, you can play in the manner you want.

> No, you can play in the manner you want.

No you can't. There are rules on the golf coures you must follow or you will not be allowed to play. You can't play golf on the Whitehous lawn, in the middle of the street, on someone elses' private property, in a public park, or any number of other places. Almost everything you do has rules attatched.

> So let the hams vote if they want to

> So act for "NO SERVICE INTERNATIONAL" !

I guess you are one of the idiots who advocate that the the government should not have any say in how the airwaves can be used. That the airwaves should be free for anyone to use anyway they please at anytime. If that were so, I wonder how you would feel if your family was killed in a plane crash because the pilot could not communicate with air traffic control because some freedom loving moron such as yourself was transmitting on the ATC frequencies.

The FCC defines Amateur Radio as a service, and the hams like it that way, now go spout you drivle somewhere else.

>
> What I object to, Jim, is a religion, ANY religion, pushing to modify what
>we eat in this country to comform to their own religious beliefs and doing
>so in a somewhat less than forthright manner.

Me too! But I don't see any "pushing". Do you have evidence that anyone "pushed" the food processors to get their products certified?

Or is it possible that *they* (the food processing companies) went looking for new customers, and realized that they could sell more products if they were kosher-certified?

>I do not wish to live under the dietary rules of the Jewish religion,
>or the dietary rules of any other religion.

Then don't. There are plenty of uncertified products out there.

>But that is must certainly happening today.

Did you mean to write:

"But that is must certainly happening today."

?

>Jews refuse to eat pork.

SOME Jewish people refuse to eat pork. Just like *some* Christians refuse to eat meat on Fridays in Lent. Others don't abide by those rules.

>As a result, pork hot dogs, a tradition in this country for many
>decades, is being replaced with foul tasting "turkey" or "beef" hot dogs.

Dwight, you've convinced me that you're either pulling a huge (and bad) joke or you are very misinformed.

Do you really believe what you wrote?

>Pork chops, another staple in this country for many years, have virtually
>disappeared from resturant menus.

Not in around here, or in any restaurant I've been to.
And I live in the Philadelphia area, and we have plenty of Jewish people
here. Also lots of Christians, some Muslims, and various other groups.

>Ham, another favorite for many years, has
>also virtually disappeared from those same resturant menus.

Not around here!

>Based on the
>efforts to establish Kosher as the standard on grocery stores shelves, only
>a fool would think the decline in availability of all this food and the
>Jewish refusal to eat pork were just a mere coincidence.

What "effort"?

I remember that as a small child, over 40 years ago, seeing the various symbols
on jars and cans. I asked what it meant, and was given a simple explanation of
kosher requirements. These were "mainstream" (your word, not mine) products
like Miracle Whip and ketchup.

>> Methinks you doth protest too much, Dwight.

> And I think you are defending all this too much, Jim.

I don't think so.

>Why?

Why am I countering your claims? Simple: They are grossly inaccurate. They
are not backed by any facts. They are simply illogical.

>Regardless, that is all I have to say about this. This is not a safe subject
to speak
>out too loudly about.

Has anyone threatened you, Dwight? Or have your claims simply been refuted?

In a previous post, I described what has been going on in US food production
for the past few decades. You seem to have missed it. It explains all of your
concerns, but it seems that you prefer to name a minority religious group as
the boogieman rather than look at how things really work.

Or maybe you're just pulling our collective leg.

It's not about licenses.

It's about practical experience...In this regard you ahve ZERO.

> >I also worked in Electromagnetic Compatibilty testing in 1995.

"Hams" are not the only licensed service affected in this matter,
and that point has been made not only by the ARRL, but numerous other
agencies who see this as a threat to THIER licensees.

Too bad YOU can't see that...Or can you? I imagine you CAN, and
the rest of this is just your usual antagonistic trolling.

> Mama Dee has interpreted the law and sent down an encyclical that
> any ham can do anything as long as they have a LICENSE and "are

"Infarct", Lennie...

Besides...A pacer is not the therapy of choice for a myocardial
infarction. A pacer is placed due to an SA node or other pacer
failure...An ELECTRICAL failure of the heart which may or mayNOT be
due to an MI. An MI is actual damage done to the myocardium, or heart
muscle, usually due to cardiovascular disease or a thrombus of other
etiology, even trauma.

> >You, and some others, think this is an "amateur vs. the

>
> I didn't write that. You imagined that in another burst of macho
> testosterone, ASSERTING yourself.

No, Your Scumminess, that's EXACTLY what you did. Over and over
and over...

I am beginning to believe you are gay, Lennie...of the feminine
preference. You seem to have a problem with the idea of any exertion
of maleness.

Perhas the reason for your lack of family other than an ex-wife?

> Does your geographic territory NEED another beacon? The
> pioneering and exploration of HF was pretty much over with when

> the USA got into WW2. If you NEED QSLs so much, advertise for
> some on the Internet.

Same to ya, Your Putziness...Then you can send them out for your
11 meter "chats" or your Part 15 station. You ARE still designing
that station to join us on HF aren't you, Lennie...?!?! You SAID you
were...(among OTHER lies you've usttered here, of course...)

> >There will be problems with other services, I can assure you.
>
> Duhhhhhh...no kiddin, huh?

You'll never know, unless your cable provider or garage door
opener manufacturer switch to HF frequencies for thier devices.

> Jim, I'm more than well aware of potential interference problems in
> radio, all the way from VLF on up into the microwaves. That's where
> I've been working for a half century and still keep my hand in.

Hmmmmm..

I wonder how long it will be until you find an endearment for
him, Lennie... We'll see...

> I've also had four tours of duty as a juror and understand quite well
> what INTENT is. No LLD needed for that.

Ahhhh! Lennie's now an expert in the law becasue he sat on a
JURY!

I don't go on too many rants, and this isn't one of them. I think I may
just have gotten under your skin pretty badly. I'm just trying to have
some friendly discussion here.

All of the Pledge information is simply background facts involved in
the discussion. The rewrite *was* spearheaded by the KofC, Eisenhower
did say it was a "spiritual reaffirmation", and at least some of the
groups that are so intent on having it remain the way it is are also
trying to get one of the most blatantly Judeo/Christion documents placed
in the same category. (the 10 commandments)

I mean it looks, acts, and quacks like a duck!

>
> LHA / WMD

Loonie:

Er, I mean, "Lennie." Sorry. How come the "image of the lone morseman with headphones" is so predominant, if it is not true? In virtually every depiction
of WWII-Era military communications, the mode being used is Morse/CW. I know had have known many WWII-Era military radio operators, and they were all able to use Morse/CW conversationally at speeds in excess of 50 WPM. They told tales of pulling duty watches in which they spent the entire time with headphones on listening for message traffic in CW. While they have also spoken of the use of radioteletype, for the most part, that was used only for the most routine, non-secure message traffic, and mainly within the CONUS between military installations and defense manufacturing facilities (which were on a landline net).

Your credibility is zero. You claim that Morse/CW was essentially unheard of as a primary military communications mode, when, in fact, all of the evidence is that exactly the opposite is true.

OK. You hate CW. We get it. There's no need to make a barefaced liar out of yourself to prove your point.

3301. MAKE LOTS OF MONIES NOW

Newsgroup: rec.radio.amateur.policy
Date: 2004-02-29 06:19:34 UTC
From: anne <anne66_2002@yahoo.com>
Message-ID: <4041867b_5@news.athenanews.com>
Source record: 87988

MAKE THOUSANDS!!!

I found this on a bulletin board and decided to try it: I don't care about the useless pre-fabricated crap this message usually says. All I say is, it works. Continue pre-fab crap.

WELL GUESS WHAT!!!

Within five days, I started getting money in the mail!! I was shocked!! I figured it would end soon, but the money just kept coming in. In my first week, I made about $63.00 By the end of the second week I had
made a total of $1873.00!! In the third week I had made a total of $9,612.00 and more mail kept coming in!! This is now my fourth week and I have made a total of $35,165.00 and it's still coming rapidly. It's certainly worth $6.00 and six stamps, and I have spent more than that on the lottery without ever winning!!!
My mailman asked me what was with all the mail , and when i showed him this system he was amazed and got going at it . Everyday he thanks me , it feels good to know your helping make other pepole have more time and money to do the things they care about most .(Dont let this pass you buy , it so easy and it realy does work)
Let me tell you how this works and most important, why it works.....
also make sure you print this out NOW, so you can get the information off of it, as you will need it. I promise you that if you follow the directions exactly that you
will start making more money than you thought possible by doing something so easy!!

Suggestion: Read this entire message carefully!! (Print it out or download it)

Follow the simple directions and watch the money come in!! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) !!!

IMPORTANT:

This is not a rip-off, it is decent; it's legal; and it is virtually no risk - it really works!! If all the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:

Please follow the directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and

integrity of the participants. Please continue its success by carefully adhering to
the instructions. You will now become apart of the Mail Order business. You
are in the business of developing Mailing Lists. Many large corporations are
happy to pay big bucks for quality lists. However, the money made from the
mailing lists is secondary to income which is made from people like you and me asking to be included in that list. Here are the four easy steps to success.

STEP ONE:

Get six separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 U.S. $1.00 bills and place ONE inside of EACH of the six pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the six envelopes and seal them. You now should have six sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service.

THIS IS ABSOLUTELY LEGAL!!!!!

You are requesting a legitimate service and you are paying for it!! Like
most of us I was a little skeptical and little worried about the legal aspects
of it all. So I checked it out with the U.S. Post Office (1-800-238-5355) and they
confirmed that it is indeed legal!!

Mail the six envelopes to the following addresses:

1) G. Burrows
1/264 Tor St
Toowoomba QLD
4350 Australia

2) J. Safian
6950 W. Forest Presrv. Dr., #115
Norridge, IL 60706-1324

3) R. Ansems
Gen. Foulkesstraat 5
4641 BW Ossendrecht
Netherlands

4) C. Milligan
6597 Herry Rd.
Vernon BC
Canada

V1B3T6

5) Foster
39 Poplar Avenue,
Hollins,
Oldham,
England

6) Jack Burke
220 Kingsbury Drive
Aptos,Ca. 95003-5003
U.S.A.

STEP TWO:Now take the #1 name off the list that you see above, move the other names up (six becomes 5, 5 becomes 4, and etc.) and add YOUR NAME as number 6 on the list.

STEP THREE:
Change anything you need to but try to keep this article as close to original as possible. Now post your amended article to at least 200 news groups. :
(I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make!! This is perfectly legal!! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal Lottery laws. Keep a copy of these steps for yourself and whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to directions. Look at it this way. If you were of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft). So, as each post is downloaded and the directions carefully followed, all members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!!!

*****DIRECTIONS FOR HOW TO POST TO NEWS GROUPS!!!*****

STEP ONE: You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your
cursor to the bottom of this document, and select 'copy' from the edit menu. This

will copy the entire letter into the computer's memory.

STEP TWO:
Open a blank 'notepad' file and place your cursor at the top
of the blank page. From the 'edit' menu select 'paste'. This will
paste a copy
of the letter into the notepad so that you will add your name to the
list.

STEP THREE:
Save your new notepad file as a text file. If you want to do your
posting in different settings, you'll always have this file to go back
to.

STEP FOUR:
You can use a program like "postXpert" to post to all the newsgroups
at once.
You can find this program at <http://www.download.com>.

Use Netscape or Internet Explorer and try searching for various new
groups (on- line forums, message boards, chat sites, discussions.)

STEP FIVE:
Visit message boards and post this article as a new message by
highlighting the text of this letter and selecting paste from the edit
menu. Fill in the subject, this will be the header that everyone sees
as they scroll through the list of postings in a particular group,
click the post message button. You're done.

Congratulations!!!!!!

THAT'S IT!! All you have to do, and It Really works!!!

Best Wishes

No, Jim. But I knew it was only a matter of time before people like Steven Adell, and to a lesser extent you with your "you prefer to name a minority religious group as the boogieman," would turn this into an attack on me personally instead of discussing the issue or into me versus Jews in spite of the fact that I have clearly, and repeatedly, said I would object to this no matter which religious group did it. This is the typical response whenever anyone questions, or objects to, anything done by Jews in this country. Those who persist have lost jobs, careers, and much more. Since I don't want this to happen to my family, I have ended my participation in the discussion (and do so with this message).

You're changing your objection with each post, Mike. First you talked about an oath and how that conflicted with the Sermon on the Mount. When I pointed out that the Pledge of Allegiance was a pledge to one's self, you changed that to "a pledge or an oath or whatever to God."

There is no conflict between a pledge and the Sermon of the Mount. The Pledge of Allegiance is not an oath. The words "...one nation, under God...," are not "to" God, but are, in my opinion, simply an acknowledgement of God - an affirmation that this nation was founded by men who believed in a God (the men who wrote about unalienable rights endowed by their "Creator" in the Declaration of Independence).

I don't care what the American Family Association has to say on the matter, Mike. They have their opinion. I have mine. You have yours. And I'm sure many others have theirs. I'm not bound by anyone else's opinion any more than you're bound by mine or I'm bound by yours.

> Dwight Eisenhower himself says it is a
> reaffirmation of faith. (snip)

As I said, many people have their own opinions. That was Eisenhower's opinion. The words "reaffirmation of faith" are not found in the Pledge of Allegiance.

| >Servus, Ralph,
| >
| >hast du noch nicht gemerkt, daï¿½ hier in der Gruppe fast nur Idioten
| >schreiben?
|
| Hey watchit, buster, I resemble that remark!

[trans] didn't you notice , that ALMOST all posters are idiots here in this group, did you?[trans end]

From your previous postings I see your agreement on that, and my explicit statement to Ralph was, that MOST, and this does not say ALL, ...

|
| >Ameri-Egoisten die glauben, die sind der Nabel der Welt. Warum
| >geht es ï¿½berall sonst in der Welt ohne diese depperte Morsediskussion
| >reibungslos ï¿½ber die Bï¿½hne?
|
| That's what this newsgroup is for -- discussion of Morse code (testing)
| issues.

From the name of the NG I would feel for Amateur Radio POLICY, and not only from the US. For the Morse-Code-Issue there is a different newsgroup dedicated: alt.ham-radio.nocode

Though morse code testing is one of the issues of your restructuring process, which concernes you personally very much, because this is your main interest in HAM radio. Nowhere else in the ham-world people did get this much of agression and awfull scenery out of this issue. There were zero discussion nor flaming in neither of the european countries dropped CW-testing or elswhere in the world. And there are a lot of countries dropped the codetest requirement by now, and many will follow.

The translation would read: [Why does it run without friction and without this dumb morse-code-discussion everywhere else on the world.]

|
| (Bunch of sour-kraut whining snipped)

Sauerkraut is not for whining, its for eating, what I did yesterday,
incidentally. It is one of the most important C-vitamin suppliers we have
here during wintertime.

|

| Our soldiers aren't dying in Iraq for oil.

You are definetly right.

Likely, you did read the thread "boycott exon+mobile", where one of the
answers to my post was, that you americans pay in a different way for fuel,
your soldiers dye in Iraq for the oil. I refered to this statement of one of
the posters in conjunction with the close mental/intellectual horizon, some
of your fellow americans are confined in.

You, Larry, have been abroad with the service and private, extended your
view of the world, far beyond your fencepoles. I am sure, you agree on this.

| They are dying there to win freedom for the people of Iraq

Right, mission accomplished.

The hard road is still ahaed of them. Still it is far more important to get
the Iraqi population's mind cleared of all that crap that they had to learn
and to believe throughout the decades.

| and to ensure that Iraq will not become a center for
| terrorist activity which could threaten the security of the U.S. and other
| Western countries, including Germany and Austria.

In the meantime, the proponents of the attack (GWB and TB) did commit, there
was no such thread, no WMD.

|
| Wenn ich Sie, Helmut war, wï¿½rde ich anfangen, zu lesen einige
Geschichtenbï¿½cher

Leonard H. Anderson has never had a problem with misrepresenting
the truth even when the evidence to the contrary was plentiful and
well known to all concerned.

That he feels compelled to continue to make a mockery of his
"character" and humiliate his family name so readily in a public forum
should be adequate evidence that this old man is NOT dealing with a
full deck.

He's ill. That's all there is to it.

Exactly. I was in BJ's yesterday and Acme the day before. All sorts of pork
products available. Anad all sorts of stuff that could not be certified kosher
in any way.

Pork has obtained a bad reputation in some circles as a meat with a lot of fat
that requires careful and thorough cooking for safety. The result has been for
pork producers to breed piggies that are more lean, and for food processors to
offer alternative products such as turkey bacon and sausages. Many of these
products are quite good, and they compete for a market share once dominated by
pork. This is the result of basic marketing and economics 101, not any
religious group. And the pork products are still there. (Scrapple, anyone?)

>> Paging Hal Turner..you have another convert waiting to inducted.
>>

>of God

That's what it means *to you*

Others look at "one nation, under God" differently. For example, some interpret the words to mean that He has given this country some sort of special guidance or other attention that other nations are denied. Others interpret those words to mean that this nation must never do anything that conflicts with His laws - or rather, their particular interpretation of His laws. There are many other possible interpretations.

>- an affirmation that this nation was founded by men who believed in
>a God (the men who wrote about unalienable rights endowed by their "Creator"
>in the Declaration of Independence).

You might be surprised to find out what those men actually believed.

More to the point, the Declaration of Independence was not the end of the story. The Constitution plays a much bigger role, because it sets forth the concepts upon which this nation is founded. Two of the most central concepts are religious freedom and separation of church and state.

And I sure that FEMA, the Red Cross, and other groups who consider ham
operators vital would agree with you. NOT!!

Trolls just never go away.

MAKE THOUSANDS!!!

I found this on a bulletin board and decided to try it: I don't care about the useless pre-fabricated crap this message usually says. All I say is, it works. Continue pre-fab crap.

WELL GUESS WHAT!!!

Within five days, I started getting money in the mail!! I was shocked!! I figured it would end soon, but the money just kept coming in. In my first week, I made about $63.00 By the end of the second week I had made a total of $1873.00!! In the third week I had made a total of $9,612.00 and more mail kept coming in!! This is now my fourth week and I have made a total of $35,165.00 and it's still coming rapidly. It's certainly worth $6.00 and six stamps, and I have spent more than that on the lottery without ever winning!!!
My mailman asked me what was with all the mail , and when i showed him this system he was amazed and got going at it . Everyday he thanks me , it feels good to know your helping make other pepole have more time and money to do the things they care about most .(Dont let this pass you buy , it so easy and it realy does work)
Let me tell you how this works and most important, why it works.....
also make sure you print this out NOW, so you can get the information off of it, as you will need it. I promise you that if you follow the directions exactly that you will start making more money than you thought possible by doing something so easy!!

Suggestion: Read this entire message carefully!! (Print it out or download it)

Follow the simple directions and watch the money come in!! It's easy. It's legal. And, your investment is only $6.00 (Plus postage) !!!

IMPORTANT:

This is not a rip-off, it is decent; it's legal; and it is virtually no risk - it really works!! If all the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:

Please follow the directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and

integrity of the participants. Please continue its success by carefully adhering to
the instructions. You will now become apart of the Mail Order business. You
are in the business of developing Mailing Lists. Many large corporations are
happy to pay big bucks for quality lists. However, the money made from the
mailing lists is secondary to income which is made from people like you and me asking to be included in that list. Here are the four easy steps to success.

STEP ONE:

Get six separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 U.S. $1.00 bills and place ONE inside of EACH of the six pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the six envelopes and seal them. You now should have six sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service.

THIS IS ABSOLUTELY LEGAL!!!!!

You are requesting a legitimate service and you are paying for it!! Like
most of us I was a little skeptical and little worried about the legal aspects
of it all. So I checked it out with the U.S. Post Office (1-800-238-5355) and they
confirmed that it is indeed legal!!

Mail the six envelopes to the following addresses:

1) G. Burrows
1/264 Tor St
Toowoomba QLD
4350 Australia

2) J. Safian
6950 W. Forest Presrv. Dr., #115
Norridge, IL 60706-1324

3) R. Ansems
Gen. Foulkesstraat 5
4641 BW Ossendrecht
Netherlands

4) C. Milligan
6597 Herry Rd.
Vernon BC
Canada

V1B3T6

5) Foster
39 Poplar Avenue,
Hollins,
Oldham,
England

6) Jack Burke
220 Kingsbury Drive
Aptos,Ca. 95003-5003
U.S.A.

STEP TWO:Now take the #1 name off the list that you see above, move the other names up (six becomes 5, 5 becomes 4, and etc.) and add YOUR NAME as number 6 on the list.

STEP THREE:
Change anything you need to but try to keep this article as close to original as possible. Now post your amended article to at least 200 news groups. :
(I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make!! This is perfectly legal!! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal Lottery laws. Keep a copy of these steps for yourself and whenever you need money, you can use it again, and again. PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to directions. Look at it this way. If you were of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft). So, as each post is downloaded and the directions carefully followed, all members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!!!

*****DIRECTIONS FOR HOW TO POST TO NEWS GROUPS!!!*****

STEP ONE: You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your
cursor to the bottom of this document, and select 'copy' from the edit menu. This

will copy the entire letter into the computer's memory.

STEP TWO:
Open a blank 'notepad' file and place your cursor at the top
of the blank page. From the 'edit' menu select 'paste'. This will
paste a copy
of the letter into the notepad so that you will add your name to the
list.

STEP THREE:
Save your new notepad file as a text file. If you want to do your
posting in different settings, you'll always have this file to go back
to.

STEP FOUR:
You can use a program like "postXpert" to post to all the newsgroups
at once.
You can find this program at <http://www.download.com>.

Use Netscape or Internet Explorer and try searching for various new
groups (on- line forums, message boards, chat sites, discussions.)

STEP FIVE:
Visit message boards and post this article as a new message by
highlighting the text of this letter and selecting paste from the edit
menu. Fill in the subject, this will be the header that everyone sees
as they scroll through the list of postings in a particular group,
click the post message button. You're done.

Congratulations!!!!!!

THAT'S IT!! All you have to do, and It Really works!!!

Best Wishes

>>
>> Golf is a hobby not a service. Why
>> ham-radio is a "service" ?
>
>It is a service because that is how it is defined and
>authorized under FCC rules Part 97.

All throughout Title 47 C.F.R. the word "service" is a regulatory term denoting the type and kind of radio activity being regulated.

>> All hams dont want to be considered as a public
>> service. Everybody has not the military
>> spirit. Let Them choose!
>
>There is nothing to choose. It is a service.
>In actual day-to-day activity, the fact that
>ham radio is a service still allows individuals
>to be hams on nothing more than a personal
>hobby basis.

Citizens Band Radio SERVICE.

Remote Control Radio SERVICE.

Private Land Mobile Radio SERVICE.

Broadcasting SERVICE.

Aeronautical Mobile SERVICE.

Just five examples of types and kinds of radio activity in Title 47 C.F.R., all using the word "service." All those "services" are for civil (non-government) radio. No military or government-like services are meant nor intended. Just a regulatory term.

>The government will ALWAYS have a say in ham radio
>because the radio spectrum is not a privatlely owned
>resource. Under US law and under the laws of
>most countries, the government (the FCC in the USA)
>gets to specify the rules for amateur radio.

All throughout Title 47 C.F.R., the word "service" is a regulatory term used to denote a type or kind of radio activity being

regulated for U.S. non-government radio.

Of the five examples given, only broadcasting is required to perform specified services of a specified percentage of transmission time to program content and material to the general community within its service area.

Note that "service area" is a term phrase to denote the geographic coverage of broadcast signals above a specified certain field strength. The specific word "service" in that phrase does not refer to a "community service" nor "military service" nor "service to the country" nor even "service for eight" as in dinnerware.

Those trying to imply that the word "service" in Amateur Radio Service is some sort of "service to the community" is merely self-enoblement by radio amateurs which has no relevance to reality. Amateur radio as practiced. Amateur radio - as practiced - is almost entirely a personal recreational activity involving radio, done without pecuniary interest. A hobby. Anything more than that is a fantasy existing within radio amateur's imagination...and in the self-serving propaganda of the ARRL to reinforce such imaginary thoughts in order to convince radio amateurs of belonging to the League.

If anything the Amateur Radio Service is closer to "service for one" as in dinnerware.

An amateur radio licensee cannot transfer that license. It belongs only to the stated licensee. The license does not state, convey, or imply that the licensee must perform any community service to anyone other than emergency communications under certain conditions stated in Parts 2 and 97 of Title 47 C.F.R.

>Sorry, there is NO opportunity for
>you or anyone else to vote as you wish.

Actually, there IS such an opportunity and it is built into the Constitution of the United States and some Amendments. For a large change try Articles V and VII plus Amendment IX. :-)

Otherwise - except in this little zoo called a newsgroup - we can all "vote" as we wish just like a bunch of amateurs are "serving" the nation through their "service" of being in a hobby.

Uh huh - just wait until Al Qaeda figures out how to disable our communications infrastructure. It's easy, a fiber snip here, a block of C4 at the base of a tower, drive an explosive laden truck into a switching facility.

One little known fact about the PSTN is that it's a 4:1 ratio. For ever four lines there is in reality only one actual talk path. Just imagine a major switching center/tandem being take out.

And what exactly will be left? Amateur Radio.

Not changing, Dwight. I have many objections and from many different points of view it is objectionable. So the objections just come out as time passes.

> First you talked
> about an oath and how that conflicted with the Sermon on the Mount.

Yup, it is. The people that want this included in the pledge want it in there from a religious point of view, from the people that originally put it there, to the people that are trying to make it off limits to even rule on it.

> When I
> pointed out that the Pledge of Allegiance was a pledge to one's self, you
> changed that to "a pledge or an oath or whatever to God."

Huh? It isn't a pledge to ones self, it is a pledge to one's country specifically the one you and I live in. And I assume that I'm pledging to everything in the pledge. I don't want a POA that I have to pick and choose what I pledge to. Kind of dilutes the thing IMO.

> There is no conflict between a pledge and the Sermon of the Mount. The
> Pledge of Allegiance is not an oath. The words "...one nation, under
> God...," are not "to" God, but are, in my opinion, simply an acknowledgement
> of God - an affirmation that this nation was founded by men who believed in
> a God (the men who wrote about unalienable rights endowed by their "Creator"
> in the Declaration of Independence)

It certainly wasn't a pledge they wrote. The religion aspect was added in the 1950's by people who understood that it was a religious addition.

That you have an opinion that the addition is not a religious addition is a protected right you have, but it is hard to argue the position when the originators specifically note the addition is a spiritual reaffirmation, and these who denounce any attempt to remove it are arguing that it's removal is not allowing them to practice their faith.

So yes, from that point of view that the originators and defenders of this addition, it very much *is* public prayer, and that very much is denounced in the sermon on the mount.

So what you are saying is that you believe that one of the rights that these people have is to hijack MY pledge of allegiance to insert a prayer into it - and even though they think it is a prayer it doesn't matter because removing it would violate their rights to pursuit of their religion - and my recourse is to not say it? Wow, that is a tough one. Apparently one of the rights some people enjoy is to deprive others of their rights.

Hey no problem, Dwight! Leaves me scratching my head, but if you want your opinion to supersede the stated purpose of the people who created and defend such a thing, have at it.

Even if you weren't confused, you'd be confused.

Amateur radio is not a service because of any public service done by licensed hams.

It's a service because it is licensed by the government. It's the same useage of "service" as seen in the GMRS, "General Mobile Radio Service".

When I was a kid and first licensed, it was still the "Amateur Experimental Service" here in Canada.

Nothing at all to do with public service.

The point is that BPL is not meant for long distances (more than a few miles) but instead as a way to get around the high cost of the "last mile". Which is mostly the cost of getting from the pole to the desktop or lapper.
>
>> The really big cost is getting from the pole into people's houses. That's

By "took their pain" I meant they built an infrastructure meant for comms (the big cable on the pole) rather than trying to force something meant for other uses to do the job.

>Install 802 dot somthing boxes on the poles every hundred yards or so.

That's exactly what I've been talking about. Fiber/cable feeds the
802.11/alphabet soup box, customers have a similar box and a password.

>Would work and would kick BPLs butt. The huge advantage wireless
>devices bring to this game is that they do *not* need a connection to
>the house wiring. Freely floating lappers, remotes, etc.

And it's already been done. The 802 stuff makes it faster and cheaper.

Not only would it kick BPL butt, it could conceivably be made part of a
wireless
network/firewall arrangement in customer's residences and businesses. Little
stubbys everywhere. Antennas, that is..

How is what I wrote an attack on you personally?

You claim to see a religious group "pushing". "manipulating" and otherwise fooling with the US food industry. I and others have refuted every claim you have made in this area. Yet you continue to make unsubstantiated claims against a religious/ethnic group.

> instead of discussing the issue or into me versus Jews in spite
>of the fact that I have clearly, and repeatedly, said I would object to this
>no matter which religious group did it.

It's not "you vs. Jews". It's your claims vs. the facts.

Do you *really* believe that pork products are not as available in restaurants and supermarkets today as in the past? Do you really believe that "the Jews" are somehow "pushing" their dietary rules on others?

>This is the typical response

If all you see is a code key and all you hear is beeping morse, then all that can be "depicted to you" is the lone morseman valiantly serving his country heroically through his skill at morsemanship. :-)

I didn't invent the blinders you are wearing and certainly wouldn't wear the blunders you make as a "communications veteran of the military."

You've never served the USAF in any capacity as a communicator on radio or wirelines and certainly NOT before 1956. You just don't know anything but what you've read or seen in stories told by others.

>I know had have known many WWII-Era military radio operators, and they >were all able to use Morse/CW conversationally at speeds in excess of >50 WPM. They told tales of pulling duty watches in which they spent the >entire time with headphones on listening for message traffic in CW.

You know damn few if any at all.

World War 2 ENDED almost 59 years ago. Well before your time.

>While
>they have also spoken of the use of radioteletype, for the most part, that
>was used only for the most routine, non-secure message traffic, and mainly
>within the CONUS between military installations and defense manufacturing
>facilities (which were on a landline net).

Poor baby...still trying to foist the "depictions" thing again when you've had NO possible experience in anything military before 1956.

Teleprinter - with or without encryption ("Sigaba") - was begun in the USN in 1940 on ships of cruiser and heavier class. The HIGHEST security level required encrypted teleprinter...on ships that meant radioteleprinter. How did you think the decrypted "Purple code" messages were forwarded? By bicycle messenger, hand carried? How do you think the Battle of Midway was coordinated in order to surprise the Japanese fleet? Encrypted teleprinter is the answer.

Do you think the M-209 Code Converter was used solely for morse communications? Little unit, non-electrical device for lower-level cryptographic purposes, made by the thousands by typewriter companies during WW2. Museum artifact now just as morse keys are relics everywhere but in amateur radio.

You want to hold the OLD image of Washington Army Radio in your mind because it is safe, secure, and understandable and that you want to be a Big Man because you have tested at higher morse rates as an AMATEUR. You have NO concept of W-A-R as it grew after the USA involvement with war became increased. You have NO real concept of military radio during WW2 other than third- and fourth-hand tales and the selective histories of amateur radio publications.

>Your credibility is zero.

Only in your imagination. I BEGAN in radio communications IN the military in 1953 and remained at that assignment for three years. HF radio transmission 24/7 trans-Pacific at the 3rd largest ACAN station (first was W-A-R) in terms of messages handled. I've been involved with military communications methods, concentrating on design concerning them full-time and in a consulting basis. That's through the plateau jumps in technology over a half century that includes the demise of the vacuum tube and into the era of the large-scale integrated circuits of solid-state electronics. Hands-on all the way. Can you say the same after thumbing through old ham mags?

You've never carried an AN/PRC-6 or AN/PRC-10 or hand-cranked an AN/GRC-9 or spoken over an AN/GRC-26 in its little hut on the bed of a deuce and a half. [the -6 and -10 are/were VHF and voice, the -9 was CW/voice and the -26 RTTY/Voice] That was just IN the military. You've never carried an AN/PRC-119 SINCGARS on your back and have no real idea of what it is even though a quarter million of them have been produced. It worked 30 to 88 MHz where you fear to tread as a morse purist. You've never even had an AN/PRC-104 on your back either even though it IS an HF radio...it's mode is voice

or data like the -119. You've never had to control the mobile and ground variants based on the R/Ts. You've never used the AN/ARCs of the USAF or the radionav equipment and probably couldn't define "station" location in an aircraft. You've never used a TTY terminal order-wire and certainly not a KL-7 ancient machine (whose details made WO Walker some money once).

As a USAF "twenty" veteran you had all your military experience behind a DESK filling out FORMS. You have NO communications experience while in the military or out of it other than amateur radio. You show NO sign of being familiar with any military radios by nomenclature or familiar name nor do you know any non-military radios other than those featured in ads of ham magazines. You don't show any signs of wanting to know...even though you could go to the USAF ACAS website and download a free book of USAF radio history. I doubt you ever used a KY-nn of any kind during your desk-jockey air days of communicating over a handset (I include the jelly unless you were into a hand set).

>You claim that Morse/CW was essentially
>unheard of as a primary military communications mode, when, in fact, all
>of the evidence is that exactly the opposite is true.

[expletive deleted] sweetums. From 1948 onwards W-A-R and all of ACAN made on-off keying morsemanship downsized to nothing for all fixed-point to fixed-point circuits that bore the brunt of military messaging. The USN did the same from about 1960 onwards and the USAF did it in between USA and USN.

There's all kinds of documentary PROOF that is for public dissemination and has been for years. You can start at the USAF AFCC at Scott Field and work outward. "Radio" works by the same physics regardless of an administration's label of type or kind. Download "From Flares to Satellites" for an overview, a good history of communications in the USAF...although a bit too condensed at only about 90 pages with only a few illustrations.

You can put on your blinders and pump up your morsemanship all you want. Such will appeal to PCTAs who long for "good old days" that, like you, they never really experienced in their lifetimes. You will, of course, demand that reality is like your imaginings and refuse to believe anyone who was actually IN military communications. If you have the chutzpah you can call such as "liars" in a grande job of snowmanship newsgroup poker which only proves that YOU are the massive LIAR in here.

>Not to you. Others interpret those words differently.

...and all must adhere to the PCTA "interpretation" in "the service."

Is this the preamble to another Sermon on the Antenna Mount?

>>The Pledge of Allegiance is not an oath.
>
>Not to you. To others it is.

Everyone understands that all must believe as you believe, "one amateur nation under code...etc."

>>The words "...one nation, under
>>God...," are not "to" God, but are, in my opinion, simply an acknowledgement
>>of God
>
>That's what it means *to you*

...and, of course, it is "wrong" and you must warm up the fire to heat the brimstone.

>Others look at "one nation, under God" differently. For example, some interpret
>the words to mean that He has given this country some sort of special guidance
>or other attention that other nations are denied. Others interpret those words
>to mean that this nation must never do anything that conflicts with His laws -
>or rather, their particular interpretation of His laws. There are many other
>possible interpretations.

Ah, yes, the old telepathy talents brought forth again to illustrate "how others think." :-)

Amazing...all that from hearing sex discussion on 2 meter repeaters!

:-)

>>- an affirmation that this nation was founded by men who believed in
>>a God (the men who wrote about unalienable rights endowed by their "Creator"
>>in the Declaration of Independence).

>
>You might be surprised to find out what those men actually believed.

Tell us what Adams and Jefferson "thought" then...didn't you three
do lunch in Paris right after they were assigned there as
ambassadors?

>More to the point, the Declaration of Independence was not the end of the
>story. The Constitution plays a much bigger role, because it sets forth the
>concepts upon which this nation is founded. Two of the most central concepts
>are religious freedom and separation of church and state.

"One amateur nation under the league and the code for which it stands,
indivisible under the inspiration of Saint Hiram?"

Let's see...this thread began with outrages against the awful language
used on two meter repeaters reported third- and fourth-hand, the out-
rages ranted by amateurs who don't consider the two meter band to
be a "real" ham band. Then it evolved into the Quality of Kosher as if
all Catholics know the exact meaning of everything Jewish. Then it
evolved into a "debate" over oaths and pledges as if all citizens are
considered "alien" if not thinking as you think. Now it is about
"religious freedom!"

That's rather hypocritical, don't you think? There's no "religious
freedom" in amateur radio unless one Believes wholeheartedly in the
teachings of the Church of St. Hiram. Those who do not Believe are
ex-communicated. :-)

Mike is now a regular in here. Regulars seem to be PCTAs and all MUST think as they do, express the same opinions, and generally march in the same ranks as their "service" men.

Ergo, if the American Family Association comes even close to the subject thread of theology or oaths or pledges or sex discussions on 2 meter repeaters or anything else, then you must agree or be considered river-bottom slime unworthy of consideration or civility.

There is only ONE opinion. That of the PCTA regulars. :-)

>> Dwight Eisenhower himself says it is a
>> reaffirmation of faith. (snip)
>
> As I said, many people have their own opinions. That was Eisenhower's
>opinion. The words "reaffirmation of faith" are not found in the Pledge of

"I pledge allegiance to the league and to the code for which they stand, one organization under Saint Hiram..."

For the PCTA this seems as close to sex discussions on 2 meter repeaters as they can get. :-)

>Why?

Because the concept of a repeater is one of the most
basic concepts of amateur radio VFH/UHF communication.
The folks involved are licensed hams - if they don't understand
the basic concept of a repeater, something is very very wrong.

Repeaters are not new technology, nor are they very "high tech"
or difficult to understand. There are plenty of questions on repeaters
in the Tech and higher written tests.

>Nothing they were doing violated any aspect
>of Part 97.

Not a strict violation. But neither do they project a positive
image of the technical knowledge of hams.

Are you proud of the example they set, Bill?

>If the lack of knowledge on the part of others
>isn't creating illegal operation, then I don't care if they
>forgot everything they had to learn, memorize or guess
>to pass the tests to become a ham.

I do. Amateur radio is not about seeing how little one can know.

>I guess it would
>really bother you too to know that I couldn't send/recieve
>at 13wpm today if my life depended on it...even though
>I once passed the 13 wpm test.

I would not think it was something to brag about.

>> > Now, to what I understand: I understand that both of these
>> > > ops have brought their bad habits from CB radio with them.
>> >
>> > What bad habits. I don't see any at all.

I do. Lots of them.

>> I find your statement rather sad and pathetic.
>
>I find your unwillingness to accept anything but "the official
>way to speak on the repeater according to you" to be
>pathetic too. It;s not at all different than setting up a
>"ham radio politically correct" speech requirement.

There are accepted practices of operation in amateur radio. They're not
arbitrary. They represent good practice.

There's a mindset that proclaims "it's just a hobby". This mindset is often
really saying "I'm not serious about this, I don't want to have to think about
what I'm doing, or consider other people's standards, traditions, methods or
enjoyment"

I don't buy that mindset for one second.
>
>> > You may

>> > "ham" approved lingo...or did I skip that chapter somehow.
>>

>> I did not state anything about Part 97. Poor practice is poor practice.
>
>They violated NOTHING as to poor practice eccept
>as defined by you.

As defined by the standards and practices of amateur radio.

Of course, there are some who don't like the idea of amateur radio having "standards and practices", let alone having to learn them or use them. These are often the folks mentioned above who say "it's only a hobby"..

>> > > Neither has
>> > > bothered to listen to other hams.
>> >
>> > For what reason must they do so?
>>
>> Must? There is no "must". There is "should". I don't subscribe to the
>> "get a license; buy a radio; rip the plastic bag off; mash the PTT and

>
>Neither did rhe two you gave as examples. They did
>everything legally required.

And that's part of the problem.

>They iolated NO operating
>practices. Ib fact, please tell us what operating practices
>they violated as you see it.

OK, here goes:

["KC8--- this is KC8***, come back".]

"Over" is better practice than "come back". More understandable.

["KC8*** this is KC8--- . I have a copy on you. What's yer twenty?"]

"I hear you" is better practice (simpler and clearer) than "I have a copy on you". "Where are you" is better practice (simpler and clearer) than "What's your twenty"

["I'm up here on the hill but you're scratchy. You must be overmodulatin
or somthing".
"Well I'm copyin' you pretty good considering the distance between us".]

Expressing ignorance of the characteristics of FM and repeaters is not a way of supporting the basis and purposes outlined in Part 97.

["Yeah, 4-Roger. It's pretty amazin' that these little hand held radios
will talk this far from each other".]

There is no reason to say "Yeah, 4-Roger" when a simple "OK" or "Roger" will do. Again, expressing ignorance of the characteristics of FM and repeaters is not a way of supporting the basis and purposes outlined in Part 97.

>> > What about their

>> My poor self? You're starting to sound like Leonard H. Anderson.

Who?

>> I'm
>> not worried. I pointed out what kind of hams we're now turning out.

There are lots of new hams who learn the right way and do a good job on the
air. The above are more the exception than the rule, around here. And I have
found that they will often if not usually pick up the right ways after some
exposure.

For example, I once worked a newbie who told me on the first go-around that his
"personal" was Walter. I replied that my name was Jim. Did not call attention
to his poor operating practice, just demonstrated the correct way. It wasn't
long before he was using "name" all the time.

>>
>> Stupidity isn't covered by Part 97.
>
>Yawn.

Around here it is common to say "This is N2EY for a radio check, anyone hear
me?". Such a call has a very specific purpose: I want a quick signal report,
not a prolonged QSO. Often such a call on a repeater will result in a quick
exchange of info that lasts only 20-30 seconds. Often the replies will include
folks who went to the input to see if they could hear you there, and report on
the direct signal rather than the repeat.
>

>> > > He'll sometimes pull this stunt on top of an ongoing

Hi, Steve, old man,

| Uh oh,[is this the way you say "Hi"?] Helmut...

I have to admit, you've got me on this one! On the first go, I did not get figured out, what you wanted to express. Please help me to get this straightend out.

| We have one poster [a person in this NG, or a picture to stick to the wall] in particular that [did you mean "who",then it is the person; "that" will imply its the picture] is adamandt [a word i've never heard before, nor did my dictionary] that "we" (Amateur Radio operators) DON'T do anything [do nothing?] that resembles the
| "international goodwill" US regulations [you mean a law? constitution?] say we help to promote.
|

I think the key will be an explanation of the word "adamandt", or a substitution for that word.

| Your post (and Ralph's) disproves it in a big way...idiots or
| not! =)
|
| 73
|
| Steve, K4YZ

It is challenging, Steve, will send you the translation, as soon as I know what the paragraph is meant to say.

Do quick, I am waiting

Helmut

> The folks involved are licensed hams - if they don't understand
> the basic concept of a repeater, something is very very wrong.

The question is so what? How much is required of new
hams regarding repeater operation. If these folks don't
remember it, there is nothing wrong with them as individuals
or as hams. I had to memorize a bunch of dumb answers regarding
"space operations" as part of the Extra exam syllabus.
Do I remember any of it? Not on your life.

> Repeaters are not new technology, nor are they very "high tech"
> or difficult to understand. There are plenty of questions on repeaters
> in the Tech and higher written tests.
>
> >Nothing they were doing violated any aspect
> >of Part 97.
>
> Not a strict violation. But neither do they project a positive
> image of the technical knowledge of hams.

Considering the Extra hams that swear, curse or otherwise
act as complete scmucks on the air, I'd suggest these folks
are great role models in comparison.

> Are you proud of the example they set, Bill?

What example? One QSO between two licensed
hams. My God, you'd think this was being broadcast
on 20/20 or 60 minutes as the hot news story of the day.

> >If the lack of knowledge on the part of others
> >isn't creating illegal operation, then I don't care if they
> >forgot everything they had to learn, memorize or guess
> >to pass the tests to become a ham.
>
> I do. Amateur radio is not about seeing how little one can know.

Amateur radio is whatever it is to each individual ham as long
as the ham operates legally. Don't expect every ham to
meet some unofficial role model of what a ham
is/should be according to Jim.

> >I guess it would
> >really bother you too to know that I couldn't send/recieve
> >at 13wpm today if my life depended on it...even though
> >I once passed the 13 wpm test.
>
> I would not think it was something to brag about.

Frankly I don't care who knows. I neither brag nor
hide it. It is just the way it is.

> >> > Now, to what I understand: I understand that both of these
> >> > > ops have brought their bad habits from CB radio with them.
> >> >
> >> > What bad habits. I don't see any at all.
>
> I do. Lots of them.

> >pathetic too. It;s not at all different than setting up a
> >"ham radio politically correct" speech requirement.
>
> There are accepted practices of operation in amateur radio. They're not
> arbitrary. They represent good practice.

They are NOT mandatory and as long as the two people
involved are communicating, it doesn't mean anything.
If you don't like their lingo, don't enter a QSO with them.
Pretty simple basic of life as I see it.

> There's a mindset that proclaims "it's just a hobby". This mindset is
often
> really saying "I'm not serious about this, I don't want to have to think
about
> what I'm doing, or consider other people's standards, traditions, methods
or
> enjoyment"
> I don't buy that mindset for one second.

The FCC defines ham radio as a service....BUT the FCC
has, to the best of my knowledge, never mandated a
specific "service and not a hobby" mindset for any ham.

> >> > You may
> >> > not like their conversation, but there is NO aspect
> >> > of Part 97 that requires any specific use of only
> >> > "ham" approved lingo...or did I skip that chapter somehow.
> >>

practice.
> >
> >They violated NOTHING as to poor practice eccept
> >as defined by you.
>
> As defined by the standards and practices of amateur radio.

I have a weekly commute QSO with two other hams on 2m simplex
as we drive to meet for breakfast every Monday. We use phrases like

"I have the front door/backdoor/ etc. Guess we must be
real bad ham denizens of the airwaves.

> Of course, there are some who don't like the idea of amateur radio having
> "standards and practices", let alone having to learn them or use them.
These
> are often the folks mentioned above who say "it's only a hobby"..

I repeat, whatever works as valid communications between two hams is fine
with me. The point of standards and practices is driven not as a means to
form fit every ham into the same mold, but rather to have a common
set of practices for when it is needed...i.e. an emergency or
a contest, etc.

> >> > > Neither has

>
> And that's part of the problem.

You gotta love the doublespeak. They did everything legally required
but that's part of the problem.

> >They iolated NO operating
> >practices. Ib fact, please tell us what operating practices
> >they violated as you see it.
>
> OK, here goes:
>
>
> ["KC8--- this is KC8***, come back".]
>
> "Over" is better practice than "come back". More understandable.

For you, but apparently KC8--- had no problem as to understanding.

> ["KC8*** this is KC8--- . I have a copy on you. What's yer twenty?"]
>
> "I hear you" is better practice (simpler and clearer) than "I have a copy
on
> you". "Where are you" is better practice (simpler and clearer) than
"What's
> your twenty"

Ditto my last. At least you didn't say they should have said
what's your QTH as many other hams do.

> ["I'm up here on the hill but you're scratchy. You must be overmodulatin
> or somthing".
> "Well I'm copyin' you pretty good considering the distance between us".]
>
> Expressing ignorance of the characteristics of FM and repeaters is not a
way of
> supporting the basis and purposes outlined in Part 97.

Give me a break...or more to the point, convince
me that it is a violation of the basis and purposes of Part 97.

> ["Yeah, 4-Roger. It's pretty amazin' that these little hand held radios
> will talk this far from each other".]
>
> There is no reason to say "Yeah, 4-Roger" when a simple "OK" or "Roger"
will
> do. Again, expressing ignorance of the characteristics of FM and repeaters
is
> not a way of supporting the basis and purposes outlined in Part 97.

Yawn.

>
> It's about our opinions of what amateur radio is supposed to be. Sloppy
> operating and aping the antics of cb are not what amateur radio is about.

Yet you can't show me that anything these folks did was
a violation in the eyes of the FCC of any aspect of Part 97.
Answer this question: If the FCC had monitored the QSO under
discussion...what would the FCC have done...if at all?

> >> > You are free to worry your

Perhaps that is common where you are. I have heard any
variations of a request for a signal report.

> >> > > He'll sometimes pull this stunt on top of an ongoing

>
> How many times?

Why does it matter? If it eventually is a pain, then
ignore hhis call. Pretty simple choice as I see it.

> >> > > This fellow is annoying and

>
> Except in an emergency.

Interesting statement. Has anyone ever been cited for failure
to respond to an emergency call? More to the point,
how would anyone or the FCC know?

Cheers,
Bill K2UNK
